CERTIFICATION

Parsons has conducted this Phase I Initial Site Assessment in general accordance with the American Society for Testing and Materials (ASTM) Standard Practice E 1527-05, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*, as applicable. This Phase I Initial Site Assessment was conducted for the following site:

- Interstate 10 Corridor Project

Parsons has reviewed all appropriate records and relevant data made available and conducted a visual site inspection of the project site. The information contained within this report is based on records and data made available and, to the best of Parsons' knowledge, is correct and current as of August 2014. This Phase I Initial Site Assessment carries no warranty for any purpose.

Prepared/Certified By: Elvira V. Gaddi September 25, 2014

Chapter 1 Summary

Parsons has conducted this Phase I Initial Site Assessment (ISA) in general accordance with the American Society for Testing and Materials Standard Practice (ASTM) E 1527-05, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*, as applicable, for the following site:

- Interstate 10 (I-10) Corridor Project

Appendix A, Exhibit 1, Project Vicinity Map, presents the regional location of the project. Appendix A, Exhibit 2, Site Map, presents the general location of the site.

The California Department of Transportation (Caltrans), in cooperation with the San Bernardino Associated Governments (SANBAG), proposes to add freeway lanes through all or a portion of the 33-mile stretch of I-10 from the Los Angeles/San Bernardino (LA/SB) county line to Ford Street in San Bernardino County. The project limits, including transition areas, extend from approximately 0.4 mile west of White Avenue in Pomona at Post Mile (PM) 44.9 to Live Oak Canyon Road in Yucaipa at PM 37.0.

1.1 Alternative 1: No Build

Alternative 1 (No Build) would maintain the existing lane configuration of I-10 within the project limits with no additional mainline lanes or associated improvements to be provided.

1.2 Alternative 2: One High-Occupancy Vehicle Lane in Each Direction

Alternative 2 (One High-Occupancy Vehicle [HOV] Lane in Each Direction) would extend the existing HOV lane in each direction of I-10 from the current HOV terminus near Haven Avenue in Ontario to Ford Street in Redlands, a distance of approximately 25 miles.

1.3 Alternative 3: Two Express Lanes in Each Direction

Alternative 3 (Two Express Lanes in Each Direction) would provide two Express Lanes in each direction of I-10 from the LA/SB county line to California Street (near SR-210) in the City of Redlands and one Express Lane in each direction from California Street to Ford Street in Redlands, a total of 33 miles. The Express Lanes would be priced managed lanes in which vehicles not meeting the minimum occupancy requirement would pay a toll. West of Haven Avenue, a single new lane would be constructed and combined with the existing HOV lane to

provide two Express Lanes in each direction; east of Haven Avenue, all Express Lanes would be constructed by the project.

Proposed project site plans can be found in Appendix B of this report.

Available information for the site and surroundings was collected and evaluated to identify Recognized Environmental Conditions (RECs). According to the ASTM Standard Practice E 1527-05, the term REC means "the presence or likely presence of hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property."

Based on the definition of an REC in the ASTM Standard Practice E 1527-05, the following RECs were identified or discovered for the project site:

- One leaking underground storage tank (LUST) incident is currently undergoing remedial activities. The site, known as the Former M&M Smog and Muffler site, is located at 1915 Tippecanoe in San Bernardino. Soil samples indicated that the soil is contaminated with gasoline-related contaminants above regulatory limits. Remedial activities are continuing at the site. A Request for No Further Action was submitted in May 2014 and is still awaiting approval.
- Wooden utility poles along the roadside and rail ties within the railroad right-of-way (ROW) are assumed to be coated with creosote, a wood preservative containing phenol derivatives and toxic hydrocarbons. Based on preliminary design, railroad ties will remain in place. Therefore, no action is required. The location and quantity of wooden utility poles cannot be determined until final design is complete. However, these wooden poles would need to be properly managed if removed and disposed. According to Southern California Edison (SCE), where poles are removed and the poles are not located in the same position, the holes are typically backfilled with sand slurry, and sometimes capped with concrete and/or asphalt, depending on the location. Post pole-removal soil analysis is only recommended if soil discoloration is observed.
- Asbestos-containing materials (ACM) are suspected to be present in the following bridge components: bridge joint compound materials, bridge rail leveling shims, concrete and asphalt, as well as, in several structures on preliminarily identified parcels for acquisition. South Coast Air Quality Management District Rule 1403 requires an asbestos survey of any bridge/structure undergoing demolition/renovation regardless of the type or age. Surveys of bridges should be performed prior to finalization of the Caltrans Project Approval/Environmental Document phase of the project. Surveys of structures, other than

bridges, should be performed during right-of-way demolition. ACMs that may be disturbed during construction activities should be managed according to California Occupational Safety and Health Administration (Cal-OSHA) regulations (Title 8, California Code of Regulations [CCR], Section 1529).

- Paint used for lane striping may contain lead-based paint (LBP) or other hazardous materials, and paint used in structures on preliminarily identified parcels for acquisition may exceed hazardous waste criteria under CCR Title 22; these would require disposal in a Class I disposal site. Any structures acquired as part of the project should be analyzed, as well as, the list of bridges affected by the proposed project. Any painted areas on these structures should be tested for LBP. It is recommended that the paint used for lane striping and in structures to be acquired be tested for LBP prior to removal to determine proper disposal methods. Surveys on bridges should be performed prior to finalization of the Caltrans Project Approval/Environmental Document phase of the project. Surveys on structures to be demolished as part of project acquisitions should have surveys conducted during right-of-way demolition.
- Previous aerially deposited lead (ADL) sampling has been conducted along the proposed project corridor. Four past reports covering approximately 18.7 miles of the proposed project corridor have indicated that soils sampled along the corridor contain some amounts of lead and have the potential to be classified as hazardous waste if not reused at the site. Caltrans has granted an exemption from further sampling and analysis of the untested portions of the corridor (Caltrans, 2008); however, a review of the appropriate Department of Toxic Substances Control (DTSC) variance needs to be conducted to determine if these soils are suitable for reuse within State right-of-way (ROW) when construction commences. It is also recommended that a new Site Assessment for Aerially Deposited Lead be conducted for the entire project corridor, as ADL levels may have changed since the previous reports were conducted. Surveys should be performed prior to finalization of the Caltrans Project Approval/Environmental Document phase of the project. Since the project is in the preliminary design phase, the exact location of where the ADL sampling should occur cannot be determined until project design is closer to being finalized.
- Several parcels have been preliminarily identified for acquisition. Several of these parcels have or have had underground storage tanks (USTs) or above-ground storage tanks (ASTs) located on them. These parcels will need to be surveyed to determine whether any USTs or ASTs are located within the area identified for acquisition. If USTs or ASTs are located within the area to be acquired, proper removal procedures will need to be followed. If the USTs or ASTs contain hazardous materials, soils surrounding the tanks should be collected and analyzed for said hazardous materials after the removal of the tanks to determine proper

handling and disposal requirements. Because the contents of these USTs and ASTs are not known, these sites are considered RECs for the project.

- Herbicides and pesticides may be present along the project location where historic and current agricultural activities occur. It is recommended that soil samples be collected and analyzed for herbicides and pesticides to determine proper handling and disposal requirements. Surveys should be performed prior to finalization of the Caltrans Project Approval/Environmental Document phase of the project.

Appendix I, RECs Identified on Project Plans, contains figures showing the locations of these RECs on the respective project plans.

No other environmental concerns were visually identified during a site reconnaissance conducted on October 28, 2013.

A Phase I ISA does not include any sampling and analysis of potentially contaminated materials. The scope of work of this Phase I ISA did not specifically include sampling and analysis; therefore, no independent soil or groundwater or other sampling and analyses were conducted.

Chapter 2 Introduction

2.1 Purpose

Parsons conducted a Phase I ISA in general accordance with ASTM Standard Practice E 1527-05, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*, as applicable:

- Interstate 10 Corridor Project

Appendix A, Exhibit 3, provides the approximate location of the site on a United States Geological Survey (USGS) topographic map.

The term REC, as defined in ASTM Standard Practice E 1527-05, means the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property. The term includes hazardous substances or petroleum products even under conditions in compliance with applicable laws. The term is not intended to include *de minimis* conditions that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

2.2 Phase I Tasks

The following tasks were performed.

Records Review

Available current and historical documents pertinent to environmental activities conducted in or near the site were reviewed. Topics of interest include chemical usage or inventories, waste management records, Resource Conservation and Recovery Act (RCRA) or Comprehensive Environmental Response Compensation and Liability Act (CERCLA) activities.

Site Reconnaissance and Interviews

Site reconnaissance to visually and physically observe and document conditions on the property was performed. Interviews were conducted in keeping with the requirements of ASTM Standard Practice E 1527-05, § 7.1 – 7.2.

File Search and Records Review

A search of federal, State, and local regulatory agency electronic databases was performed. This database search identifies locations that are regulated under various environmental laws, notably CERCLA, RCRA, and Toxic Substances Control Act (TSCA). It also identifies locations where a release of hazardous substances has occurred or is suspected.

Historical Records Review

Available historical aerial photographs were reviewed to identify all obvious uses from the present back to the first developed use or 1950, whichever is earlier.

Evaluate Data and Prepare Report

Significant findings from the above-stated tasks were summarized, RECs were identified, and recommendations were made for additional site assessment activities, if needed.

2.3 Special Terms and Conditions

- The information and conclusions presented in this report are valid only for the circumstances of the site investigated as described in this report as it existed during the October 28, 2013, investigation time period.
- This report does not constitute a warranty, guarantee, or representation of the absolute absence of hazardous or otherwise harmful substances or conditions found on the site or, if such substances and conditions are on the site, that the investigation accurately defined the degree and extent of possible contamination of the site.
- Parsons evaluated the reasonableness and completeness of the available relevant information but does not assume responsibility for the truth or accuracy of any information provided to Parsons by others or for the lack of information that is intentionally, unintentionally, or negligently withheld from Parsons by others.
- After acceptance of this report, if Parsons obtains information that it believes warrants further exploration and development, Parsons will endeavor to provide that information, but Parsons will not be liable for not doing so.
- This report is neither a legal opinion nor compliance with any environmental law, "innocent landowner defense," or "due diligence inquiry." Only legal counsel involved in the property transaction is competent to determine the legal implications of information or conclusions contained in this report.
- Parsons is not responsible for any effect on the property owner(s)' or others' legal rights, obligations, or liabilities; or for any effect upon the financeability, marketability, or value of the property; or for the occurrence or nonoccurrence of any transaction involving the property based on the information stated in this report.

2.4 Limitations and Exceptions of Assessment

To achieve the study objectives stated in this report, Parsons based its conclusions on the best information available during the period of the investigation and within the limits prescribed by the ASTM Standard.

No investigative method can completely eliminate the possibility of obtaining partially imprecise or incomplete information. Professional judgment was exercised in gathering and evaluating the information obtained, and Parsons commits itself to the usual care, thoroughness, and competence of the engineering profession.

2.5 Limiting Conditions and Methodology Used

The ISA investigations were limited to a records review (i.e., federal/State environmental databases, historic topographic maps, and historic aerial photographs) and a site reconnaissance. The Phase I ISA investigations were completed in accordance with the ASTM Standard Practice E 1527-05.

The site investigation did not include detailed surveys of the project site, such as a radon gas survey, analysis of potable water, a wetlands study, or environmental sampling (e.g., soil and groundwater sampling and analysis).

The ISA investigation did include the following non-scope items: ACM in structures and LBP in structures and paint used for lane striping.

2.6 User Reliance

This report was prepared for Caltrans District 8. It may be relied upon by Caltrans District 8.

This page intentionally left blank.

Chapter 3 Site Description

3.1 Location of Property

The I-10 Corridor Project starts in Pomona, California, and continues eastwardly and terminates in Redlands, California.

3.2 Site and Vicinity Characteristics

Table 3-1 provides a description of the properties directly adjacent to the site.

Table 3-1. Adjacent Properties

Direction	Description of Adjacent Properties
North	Most of the adjacent properties north of I-10 include commercial and industrial facilities with some residential housing. There is some agricultural use north of I-10 in Redlands. In addition, along the eastern end of the alignment in Redlands, most of the adjacent properties are residential.
South	Most of the adjacent properties south of I-10 include commercial and industrial facilities with some residential housing. Ontario International Airport is located south of I-10 in Ontario. There is some agricultural use south of I-10 in Redlands. In addition, along the eastern end of the alignment in Redlands, most of the adjacent properties are residential.
East	East of the project alignment is residential housing and agricultural land.
West	West of the project alignment is mostly urban residential housing.

3.3 Descriptions of Structures, Roads, and Other Improvements on the Site

The existing I-10 consists of three to five lanes in each direction (eastbound and westbound). The number of lanes varies throughout the project alignment. Both the eastbound and westbound lanes have 8-foot-wide paved outside shoulders.

Industrial, commercial, and residential land surrounds the proposed project area. The study area includes land within a 0.25-mile distance from the proposed project and begins approximately 2 miles west of the LA/SB county line in Pomona and terminates at Ford Street in Redlands.

3.4 Information Reported by User Regarding Environmental Liens or Specialized Knowledge or Experience

Title Records

A list of preliminary ROW acquisition properties that may have environmental concerns is presented in Section 4.1.3. The list will be finalized at later stages of the project. Title reports for the freeway ROW acquisition properties were not obtained and not reviewed for this report.

Environmental Liens

Available information on the property does not indicate environmental liens on the property.

Specialized Knowledge or Experience

Other than the information contained herein, no specialized knowledge or experience was reported or discovered for the project.

Commonly Known or Reasonably Ascertainable Information

Other than the information contained herein, no information was reported concerning commonly known or reasonably ascertainable information.

Valuation Reduction for Environmental Issues

Because the property is already owned by Caltrans District 8, no valuation reduction was calculated.

Owner, Property Manager, and Occupant Information

Other than the information contained herein, no information was reported concerning the owner, property manager, and occupants. The property is owned by the State.

Reason for Performing Phase I

The ISA is being conducted as part of the California Environmental Quality Act (CEQA) and National Environmental Policy Act (NEPA) process to document site conditions prior to project construction along I-10.

Other

No other information of environmental interest was provided by Caltrans District 8.

3.5 Current Uses of the Property

The current use of the property is a transportation facility. I-10 consists of three to five lanes in each direction (eastbound and westbound), with 8-foot-wide paved outside shoulders. There are

3-foot-wide gravel shoulders along I-10, except at overcrossing locations where there are no gravel shoulders.

The property surrounding the proposed project is currently commercial, industrial, residential, and open space/undeveloped land.

3.6 Past Uses of the Property

Based on available aerial photographs (see Section 4.4.1), the project site has been designated as roadway as far back as 1954. Undeveloped land was predominant in the immediate vicinity of the project area in the early 1900s. Industrial, commercial, agricultural, and residential uses have been identified in the immediate vicinity of the project area since the mid-1900s. The industrial and commercial areas have expanded. Residential areas have developed farther east and south of the project alignment. Agricultural use has been reduced.

3.7 Current and Past Uses of the Adjoining Properties

Table 3-1 provides a description of the current uses of the adjoining properties. Historical aerial photos show the adjacent properties to consist of agriculture, undeveloped land, and industrial/ commercial use. Most of the current structures adjacent to the project location have been present since 2002.

This page intentionally left blank.

Chapter 4 Records Review

This section presents information concerning the site and the surroundings from various recorded sources. Electronic databases representing standard environmental record sources and physical setting sources were reviewed. Information pertinent to the site is summarized in this section.

4.1 Standard Environmental Record Sources, Federal and State

The services of an environmental database company was retained to search applicable regulatory agency lists and standard environmental record sources to identify locations of potential concern within the ASTM Standard Practice E 1527-05 (Standard) minimum search distances. Because the project site area is large, the search distance was limited to 0.25-mile from the boundary of the project site area, with the exception of the National Priorities List (required search distance of 1.0 mile) and the Treatment, Storage, and Disposal Facilities (TSDF) database (required search distance of 0.50 mile). The following summarizes the environmental database reports, dated October 10, 2013 (EDR, 2013) and March 24, 2014 (EDR, 2014). Appendix D presents the complete environmental data reports. The reports include maps indicating the search distance of 0.25-mile, 0.50-mile, and 1.0-mile from the boundary of the project site area. Appendix A, Exhibit 3, presents the location of the mapped sites relative to the site.

4.1.1 Databases with No Mapped Sites

Federal ASTM Records

Table 4-1 lists federal databases where no mapped sites were found within the search area.

Table 4-1. Federal ASTM Databases with No Mapped Sites

Acronym/ Abbreviation	Database	Description
NPL	National Priority List	The NPL listing, also known as the Superfund list, is a subset of the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) database. The NPL database identifies more than 1,200 sites nationwide for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As a result, the environmental database company provides coverage for more than 1,000 NPL site boundaries produced by the United States Environmental Protection Agency (EPA) Environmental Photographic Interpretation Center.
Proposed NPL	Proposed National Priority List Sites	A site that has been proposed for listing on the NPS through the issuance of a proposed rule in the *Federal Register.* EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Table 4-1. Federal ASTM Databases with No Mapped Sites

Acronym/ Abbreviation	Database	Description
Delisted NPL	National Priority List Deletions	The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that EPA uses to delete sites from the NPL. In accordance with 40 *Code of Federal Regulations* (CFR) 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.
US ENG CONTROLS	Engineering Controls Site List	A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or affect human health.
US INST CONTROLS	Sites with Institutional Controls	A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.
US CDL	Clandestine Drug Labs	A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this Web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.
TSCA	Toxic Substances Control Act	TSCA identifies manufacturers and importers of chemical substances included on the TSCA Chemical Substance Inventory list. It includes data on the production volume of these substances by plant site.
SSTS	Section 7 Tracking Systems	Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act (FIFRA), as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to EPA by March 1 each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.
ICIS	Integrated Compliance Information System	ICIS supports the information needs of the national enforcement and compliance program, as well as the unique needs of the National Pollutant Discharge Elimination System (NPDES) program.
MLTS	Material Licensing Tracking System	MLTS is maintained by the Nuclear Regulatory Commission (NRC) and contains a list of approximately 8,100 sites that possesses or uses radioactive materials and that are subject to NRC licensing requirements. To maintain currency, EDR contacts the Agency on a quarterly basis.
RADINFO	Radiation Information Database	RADINFO contains information about facilities that are regulated by EPA regulations for radiation and radioactivity.

Table 4-1. Federal ASTM Databases with No Mapped Sites

Acronym/ Abbreviation	Database	Description
RAATS	RCRA Administrative Tracking System	RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.
PRP	Potentially Responsible Parties	A listing of verified PRPs.

State, Local, and Tribal Records

Table 4-2 lists State, local, and tribal databases where no mapped sites were found within the search area.

Table 4-2. State, Local, and Tribal ASTM Databases with No Mapped Sites

Acronym/ Abbreviation	Database	Description
Cortese	"Cortese" Hazardous Waste & Substances Sites List	The sites for the list are designated by the State Water Resource Control Board (LUST), the Integrated Waste Board (SWF/LS), and the DTSC (Cal-Sites).
INDIAN RESERVE	Indian Reservations	This map layer portrays Indian administered lands of the United States that have any area equal to or greater than 640 acres.
INDIAN LUST	Leaking Underground Storage Tanks on Indian Lands	A listing of LUST locations on Indian Land.
INDIAN UST	Underground Storage Tanks on Indian Lands	The Indian UST database provides information about USTs on Indian land.

4.1.2 Databases with Mapped Sites

Federal ASTM Records

Table 4-3 lists federal databases where mapped sites were found within the search area. RECs were not identified after reviewing the database information. Refer to the full database reports in Appendix D for information on sites where no RECs are identified.

State of California ASTM Records

Table 4-4 lists State databases where mapped sites were found within the search area. A discussion of RECs that were identified after reviewing the database information follows Table 4-4. Refer to the full database reports in Appendix D for information on sites where no RECs are identified.

Table 4-3. Federal ASTM Databases with Mapped Sites

Acronym/ Abbreviation	Database	Description	Number of Mapped Sites	RECs	Comments
CERCLIS	Comprehensive Environmental Response, Compensation, and Liability Information System	CERCLIS contains data on potentially hazardous waste sites that have been reported to EPA by states, municipalities, private companies, and private persons, pursuant to Section 103 of the CERCLA. CERCLIS contains sites that are either proposed to or on the NPL and sites that are in the screening and assessment phase for possible inclusion on the NPL.	1	No	Site was a warehouse full of waste paint that only required disposal.
CERC NFRAP	CERCLIS No Further Remedial Action Planned	CERCLIS sites designated NFRAP have been removed from the CERCLIS database. NFRAP sites may be sites where, following an initial investigation, no contamination was found, contamination was removed quickly without the need for the site to be placed on the NPL, or the contamination was not serious enough to require Federal Superfund action of NPL consideration. NFRAP sites were removed to lift the unintended barriers to the redevelopment of these properties, and EPA has archived these to avoid repeat investigations in the future.	1	No	Site does not qualify for the NPL based on existing information and was assigned a low corrective action priority.
CORRACTS	Corrective Action Report	CORRACTS identifies hazardous waste handlers with RCRA corrective action activity.	1	No	Same facility listed under CERC NFRAP. Listing under CORRACTS related to CERC NFRAP listing.

Table 4-3. Federal ASTM Databases with Mapped Sites

Acronym/ Abbreviation	Database	Description	Number of Mapped Sites	RECs	Comments
RCRA-TSDF	Resource Conservation and Recovery Act - Treatment, Storage and Disposal	The RCRA TSD database list identifies those facilities or locations that have notified EPA of their activities relative to their onsite treatment, storage, and/or disposal of hazardous wastes. A listed site does not necessarily indicate environmental problems at the site but rather that the site is (or was) engaged in hazardous waste activities; therefore, it may have the potential to cause environmental degradation if hazardous wastes have been mishandled or otherwise released in an uncontrolled manner.	4	No	All four sites had administrative notices of violations and were indicated to have complied accordingly. All four sites are located outside of the project footprint (the nearest is located within 0.29 mile of the boundary of the project area) and are not considered RECs for the project location.
RCRA-LQG	RCRA - Large Quantity Generators	The LQG list identifies those facilities or locations that have notified EPA that they generate (or have generated) at least 2,200 pounds (lbs) (998 kilograms [kg]) of non-acutely hazardous wastes and/or 2.2 lbs (1 kg) of acutely hazardous waste, monthly.	27	No	Of the 27 sites, 5 sites had administrative notice of violations (NOV), of which 4 sites were indicated to have complied. The 1 site that received 2 NOVs was cited as a result of a routine compliance inspection in 2006 and 2009. The other 22 sites had no violations.
RCRA-SQG	RCRA - Small Quantity Generators	The SQG list identifies those facilities or locations that have notified EPA that they generate (or have generated) less than 2,200 lbs (998 kg) of non-acutely hazardous wastes and/or 2.2 lbs (1 kg) of acutely hazardous waste, monthly.	202	No	All but 3 SQGs did not have any violations. The 3 SQGs cited for violations completed compliance.
RCRA-CESQG	RCRA - Conditionally Exempt Small Quantity Generators	CESQGs generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.	1	No	Site has no violations.
RCRA NonGen/NLR	RCRA - Non Generators/No Longer Report	Non-generators do not presently generate hazardous waste.	15	No	None of the sites had any violations reported.

Table 4-3. Federal ASTM Databases with Mapped Sites

Acronym/ Abbreviation	Database	Description	Number of Mapped Sites	RECs	Comments
ERNS	Emergency Response Notification System	ERNS records and stores information on reported releases of oil and hazardous substances.	5	No	Four of the releases were cleaned up. The 5th was a 2009 report of a potential release of anhydrous ammonia.
HMIRS	Hazardous Materials Information Reporting System	HMIRS contains hazardous material spill incidents reported to the Department of Transportation.	1	No	Four-gallon gasoline spill in 1992.
US BROWNFIELDS	Brownfields Sites	Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant.	1	No	Site was a railroad ROW and has been transferred to the City of Colton.
FTTS	FIFRA/ TSCA Tracking System	FTTS tracks administrative cases and pesticide enforcement actions and compliance activities related to FIFRA , TSCA, and EPCRA (Emergency Planning and Community Right-to-Know Act)	1	No	Site inspected by State under TSCA Section 6 for polychlorinated biphenyls (PCBs), no violations.
PADS	PCB Activity Database System	PADS identifies generators, transporters, commercial storers, and/or brokers and disposers of PCBs who are required to notify EPA of such activities.	1	No	Same site under FTTS.
FINDS	Facility Index System/Facility Registry System	FINDS contains facility information and 'pointers' to other sources that contain more detail.	192	No	Same as those sites found in RCRA databases.
RMP	Risk Management Plans	This database lists companies that use certain flammable and toxic substances and required to develop a Risk Management Program.	5	No	Although there were accidental releases of anhydrous ammonia from 2 facilities, these are not considered RECs.

Table 4-4. State ASTM Databases with Mapped Sites

Acronym/ Abbreviation	Database	Description	Number of Mapped Sites	RECs	Comments
SCH	School Sites	This database contains proposed and existing school sites that are being evaluated by DTSC for possible hazardous materials contamination.	2	No	Sites are under investigation as potential school locations. No further action is required.
SWF/LF	Solid Waste Facilities/Landfills	SWF/LF Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state.	1	No	No violations related to being an SWF/FL site were found for this site.
WMUDS/SWAT	Waste Management Unit Database System	WMUDS/SWAT is used for program tracking and inventory of waste management units.	3	No	No violations related to being a WMUDS/SWAT site were found for these sites.
WDS	Waste Discharge System	California Water Resources Control Board provides this list of WDS.	29	No	No violations related to being a WDS site were found for these sites.
LUST	Leaking Underground Storage Tank	The LUST Incident Reports contain an inventory of reported LUST incidents.	157	Yes (1 site)	One hundred forty-seven (147) of these sites are closed cases and are not RECs. Nine (9) sites are considered to still be open; however, eight (8) are located outside of the project footprint and are not RECs. Details after table. One (1) open site is located within the project footprint at 1915 East Tippecanoe in San Bernardino. It is considered an REC for the project. This site is also discussed under the CHMIRS database.
CA FID UST	California Facility Inventory Database for Underground Storage Tanks	The Facility Inventory Database contains active and inactive UST locations.	152	No	None of these sites had CA FID UST-related violations.

Table 4-4. State ASTM Databases with Mapped Sites

Acronym/ Abbreviation	Database	Description	Number of Mapped Sites	RECs	Comments
SLIC	Spills, Leaks, Investigations and Cleanup	These data come from the California Regional Water Quality Control Board and list sites where SLIC activities are occurring or have occurred.	5	No	Three (3) of 5 sites have closed cases. The other 2 sites have ongoing investigations for soil contamination. The contamination is limited to the parcel (i.e., no offsite migration of contamination). All are located outside of the project footprint; therefore, none of these sites are RECs.
UST	Underground Storage Tanks	The UST database contains registered USTs.	103	No	No UST-related violations were reported for these facilities.
CUPA Listings	Certified Unified Program Agency database	This is a listing of sites included in the county's CUPA database based on Chapter 6.11 of the California Health and Safety Code.	1	No	No CUPA listing-related violations were reported for this facility.
SWEEPS UST	Statewide Environmental Evaluation and Planning System	This is a UST listing that was updated and maintained by the State Water Resources Control Board in the 1990s.	222	No	None of these sites have SWEEPS UST-related violations.
CHMIRS	California Hazardous Materials Incident Report System	CHMIRS contains information on reported hazardous materials incidents (i.e., accidental releases or spills).	33	Yes (1 site)	Thirty-one (31) of the sites are outside of the project footprint and are not considered RECs for the project. One (1) other site is located within the project footprint, but the contamination has been cleaned up. This site is not an REC for the project location. One (1) site is within the project footprint. This site has already been identified as an REC under the listings for LUSTs (1915 East Tippecanoe in San Bernardino).
AST	Aboveground Storage Tanks	The AST database contains registered ASTs.	41	No	None of these sites had AST-related violations.

Table 4-4. State ASTM Databases with Mapped Sites

Acronym/ Abbreviation	Database	Description	Number of Mapped Sites	RECs	Comments
DEED	Recorded Land Use Restrictions	The use of recorded land use restrictions is one of the methods DTSC uses to protect the public from unsafe exposures to hazardous substances and wastes.	3	No	All 3 sites are located outside of the project footprint and are not considered to be RECs for the project.
VCP	Voluntary Cleanup Program	This database contains low threat level properties with either confirmed or unconfirmed releases, and the project proponents have requested that DTSC oversee the investigation or cleanup activities and have agreed to provide coverage for DTSC's costs.	4	No	All 4 of these sites are located outside of the project footprint and are not considered to be RECs for the project.
RESPONSE	Response List	This list identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity.	1	No	This site is not within the project footprint.
HAZNET	Hazardous Waste Manifests	The data is extracted from uncorrected hazardous waste manifests received by DTSC and may contain some invalid information such as generator ID, TSD ID, waste category, and waste disposal method.	1,446	No	This database does not indicate any violations for any of the listed hazardous waste generators, except in the case of those sites that appear in more than one database. Of the 88 sites that are listed in multiple databases, 2 sites are listed with violations. Altawood Inc. is an SQG that was cited during a routine compliance site inspection in 2008 for violations related to generators in general. No further information regarding this particular citation is available from the database. Tenax is an SQG that was cited during a routine compliance site inspection in 1989 for violations related to generators in general. Compliance was achieved for this citation.

Table 4-4. State ASTM Databases with Mapped Sites

Acronym/ Abbreviation	Database	Description	Number of Mapped Sites	RECs	Comments
ENVIROSTOR	DTSC Site Mitigation and Brownfields Reuse Program	The Envirostor database identifies sites that have known contamination or sites for which there may be reasons to investigate further.	9	No	All 9 sites are outside of the project footprint, 4 of which require no further action. The 5 other sites outside of the project footprint include 2 sites that have achieved certification with requirements for operations and maintenance plans and land use controls, 2 MGP sites with approved Removal Action Completion Reports and scheduled for certification in 2014 and land use covenants in 2015, and 1 site undergoing site remediation activities.

Further details on the eight (8) LUST sites considered to still be open are provided here:

- Three (3) of the open LUST investigation sites (Shell Service Station located at 5289 Moreno Street in Montclair, Fast Fuel Service Station #920 located at 1315 4th Street in Ontario, Thrifty Oil #323/ARCO #9695 located at 111 Valley Boulevard in Rialto,) have open LUST investigations. These sites are not an REC for the project because the sites are located outside of the project footprint and only soil was contaminated.

- Five (5) of the open LUST investigation sites (Truckomat located at 1955 Hunts Ln in San Bernardino, Terminal Stations, Inc located at 2300 Steel Road in Colton, Royal Truck Stop located at 2300 Steel Road in Colton, Bear Oil located at 24913 Redlands Boulevard in Loma Linda, and Two Sisters Wheels & Tires located at 24891 Redlands Boulevard in Ontario) have open LUST investigations. These sites have had groundwater contamination; however, the contamination has not migrated into the project footprint. Therefore, these sites are not RECs for the project.

4.1.3 Identified Recognized Environmental Conditions

The following summarizes the information concerning RECs identified during a review of the environmental database report.

1915 East Tippecanoe Avenue, San Bernardino, CA, 92410

This site is known as the Former M&M Smog and Muffler site. This site has been identified as an REC in two databases: LUST and CHMIRS. This site is still undergoing site investigations. In July 2012, a Detailed Site Investigation was conducted at the property. Soil samples indicated that the soil is contaminated with gasoline-related contaminants above regulatory limits. These contaminants include total petroleum hydrocarbons (TPH) and volatile organic compounds (VOCs), including benzene and ethylbenzene. Groundwater is also contaminated. Contaminants above regulatory limits include TPH, TPH-d (diesel), TPD-mo (motor oil), and VOCs (benzene, ethylbenzene, toluene, xylene, fuel oxygenate methyl tertiary-butyl ether [MTBE], and 1,2-dichloroethane [1,2-DCA]). Soil vapor extraction is also being conducted at the site.

In a letter dated, March 10, 2013, the Santa Ana Regional Water Quality Control Board discussed scope and procedures for the additional soil vapor extraction that will be completed to reduce hydrocarbon impacts in former source areas and obtain the necessary environmental case closure required to facilitate property acquisition and redevelopment in conjunction with the 1-10 Corridor Project. In May 2014, a Remediation Closure Report was submitted to the Santa Ana Regional Water Quality Control Board to summarize environmental investigation and

remediation activities conducted at the site and to present an updated Site Conceptual Model in support of a request for a No Further Action status for the site (Stantec, 2014). Termination of remedial activities is still being evaluated at this time.

Preliminarily Identified Properties for Acquisition

Several properties have been preliminarily identified for acquisition as part of the proposed project. Some of these properties have been identified as potentially being RECs. These are summarized in Table 4-5.

4.2 Environmental Agency Records

Findings from the environmental database review identified RECs resulting in the need for further review of agency records.

For the Former M&M Smog property, Santa Ana Regional Water Quality Control Board documents were reviewed. For the Lamonk property, DTSC records on the Envirostor database were reviewed. The information is summarized in Section 4.1.3.

4.3 Physical Setting Source(s)

Appendix A, Exhibit 3, presents the location of the site on a USGS topographic map.

4.3.1 USGS Topographic Map

The project site is located within the Guasti, Fontana, Ontario, Redlands, San Bernardino, and San Bernardino South California USGS 7.5-minute Topographic Quadrangles. Exhibit 3 presents the location of the project site on topographic maps. Historical topographic maps were reviewed (see Section 4.4.2). Most of the project area gradient on the western end of the alignment is to the south. From approximately the eastern edge of Loma Linda to the eastern end of the project alignment in Redlands, the gradient is to the west (TIS, 2008b).

4.3.2 Geologic, Hydrogeologic, and Meteorological Review

Geology

The general project location geography generally slopes southward along the western end of the project alignment. Towards the eastern end of the alignment (from Loma Linda to Redlands), the general geography slopes westward. The ground surface elevations vary from approximately 970 feet on the western end in Pomona and gradually slope upward to an approximate elevation of 1,700 feet in Redlands (USGS, 2008).

Several fault zones are located within the project area including, but not limited to, the Whittier Fault, Chino Fault, San Jacinto Fault, San Andreas Fault, and the Banning Fault (USGS, 2008).

Hydrogeology

The general project location hydrogeology can be generally described as Cenozoic nonmarine (continental) sedimentary rocks and alluvial deposits. There are smaller areas of Pre-Cenozoic metamorphic rocks of unknown age and Precambrian rocks of all types, including coarse-grained intrusives.

At the 1915 East Tippecanoe Avenue site in San Bernardino, groundwater is approximately 30 feet below ground surface and generally flows in a southwesterly direction. However, groundwater levels typically rise and fall depending on rainfall levels in the area.

Currently, additional studies concerning the hydrogeology for the 33-mile project footprint are being conducted and further information can be found in the environmental document prepared for the project.

Meteorology

The project site is located between Pomona and Redlands. This area is located in southern California with an arid to semi-arid climate. Meteorological studies and investigations from

weather stations located in Fontana Kaiser, San Bernardino, and Redlands have indicated that the average high of 93.8 degrees Fahrenheit (°F) occurs during the summer months and a low of 41.3°F occurs in the winter months. The average annual temperature is 65.5°F as measured at the Ontario International Airport. Very little or no rainfall occurs during the summer months. Rainfall typically occurs from December through March, providing an average annual rainfall of 10.92 inches of rain, as measured at the Ontario International Airport (WRCC, 2013).

4.4 Historical Use Information

4.4.1 Aerial Photographs

Copies of aerial photographs of the subject site and surrounding areas were obtained for the years 1928, 1938, 1949, 1953, 1960, 1966, 1968, 1976, 1977, 1980, 1989, 1994, and 2002 (TIS, 2008a, EDR 2013). Appendix D presents these photographs. Most of the project site is situated in the urban areas of the cities of Pomona, Claremont, Upland, Montclair, Ontario, Fontana, Rialto, Colton, San Bernardino, Loma Linda, and Redlands.

The 1928 aerial photographs cover only the western portion of the project site. The area directly north and south of the project site is mostly agricultural in nature, with scattered home sites. Roads exist along certain portions of the current alignment of I-10.

In 1938, Southern Pacific Railroad, Atchison Topeka and Santa Fe Railroad, and Santa Ana River are visible. A large plant and quarry are visible at Slover Mountain in Colton. Except for agricultural and commercial development on the west side, there is minor development visible in Ontario. South of Holt Avenue between Archibald Avenue and Turner Avenue is a significant industrial facility. The cities of Montclair and Pomona are mostly agricultural in nature along the project alignment. Cucamonga Creek is still in its natural state. Significant residential development is visible in Colton and Redlands. Everywhere else along the alignment is agricultural.

The 1949 aerial photographs cover only the western portion of the project site. Central Ontario is shown with more residential and commercial development. Ontario International Airport has been established. Agriculture still dominates in the areas of Pomona, Montclair, and eastern Ontario, although residential areas have increased slightly in Pomona and Montclair. Cucamonga Creek is shown to have been channelized.

In 1953, the western part of I-10 is under construction from Pomona to Ontario at Archibald Avenue. I-10 is visible as an interstate from east Ontario, but it terminates in Colton, merging into a major surface road that extends to the eastern end of the alignment. Significant residential and commercial development has occurred along the alignment in Pomona; however, the project

area around Montclair has remained largely agricultural. In the Ontario area, development has also increased along the alignment. A large plant (Kaiser Steel) is visible in Fontana featuring a slag dump and oil tanks (see also Section 4.4.2). In Colton, Morrow Field and a large rail yard are visible adjacent to the alignment. Slover Mountain has been reduced dramatically due to mining. Parts of the Santa Ana River and one of its tributaries have been filled in for agricultural use in Colton. Significant residential development is visible in Colton and Redlands.

The 1960 aerial photographs of the western part of the project area show extensive development has occurred north and south of I-10 in the Pomona area and south of I-10 in Montclair, and increased development has occurred in western and central Ontario. North Montclair, Upland, and east Ontario remain mostly agricultural. The western portion of the I-10 project corridor is shown as complete with interchanges at Indian Hill Boulevard (Pomona), Central Avenue (Montclair/Upland), Mountain Avenue (Ontario/Upland), Euclid Avenue (Ontario/Upland), 4th Street (Ontario), Vineyard Avenue (Ontario), Archibald Avenue (Ontario) and Haven Avenue (Ontario). New facilities have also been added at Ontario International Airport.

In 1966, I-10 is visible as a raised structure throughout the entire alignment. The large plant in Fontana has expanded significantly, and percolation ponds adjacent to I-10 are visible. Colton Recreational Lake is visible as one rectangular and two small round bodies of water south of Morrow Field in Colton. Slover Mountain has again been reduced dramatically due to mining. I-215 is now visible. More residential development is visible throughout the alignment, particularly in Fontana.

The 1968 aerial photographs of the western part of the project area show more residential and commercial development occurring north and south of I-10. Patches of agricultural and vacant land along the alignment are being filled in with housing. The area east and north of the I-10/ Haven Avenue interchange has been graded.

In 1976, Ontario Motor Speedway is visible in Ontario. The section of I-15 north of I-10 is now visible. The Fontana plant's percolation ponds seem to have dried up. A large rail yard is visible in Bloomington, adjacent to I-10 on the south. The rectangular Colton Recreational Lake appears to be dry. Slover Mountain has been almost completely leveled. More residential development is noted.

The 1977 aerial photographs of the western part of the project area show a few additional residential and commercial developments north and south of I-10. These photographs also show that the interchanges at Euclid Avenue and Vineyard Avenue have been reconfigured.

In 1980, the section of I-15 south of I-10 is now visible. The Fontana plant has again expanded, and the percolation ponds appear to be filled in. Tri-City Airport in San Bernardino is visible. More residential development is noted.

The 1989 aerial photographs of the western part of the project area show continuing fill-in of vacant/agricultural lots along the project alignment with residential and commercial development. By this time, the main runway at Ontario International Airport has been extended past Turner Avenue. In the eastern Ontario area, residential and commercial development is beginning to occur north and south of I-10. Portions of Ontario Motor Speedway are also being developed into commercial areas.

In 1994, Ontario Motor Speedway is no longer visible. The I-10/Haven Avenue interchange has been reconfigured. Significant commercial development is visible in Ontario. Also in Ontario, a large composting facility is visible. Many of the Fontana plant structures are no longer visible. Morrow Field is no longer visible. State Route 30 is visible in Redlands. More residential development is noted, particularly in Fontana, Bloomington, and Loma Linda.

In 2002, significant commercial and industrial development is visible in Ontario. Additional residential development is visible throughout. The I-10/Archibald Avenue interchange has been reconfigured.

4.4.2 Historic Topographic Maps

Most of the project site is situated in the urban areas of the cities of Pomona, Claremont, Upland, Montclair, Ontario, Fontana, Rialto, Colton, San Bernardino, Loma Linda, and Redlands. Copies of topographic maps for the project site and surrounding area were obtained from the following California Quadrangle maps (TIS, 2008b; EDR 2013):

- 1901 – Southern California; Ontario, California; San Bernardino, California; Redlands, California
- 1903 – Cucamonga, California
- 1928 – Claremont, California
- 1941 – Guasti, California
- 1942 – Ontario and Vicinity, California
- 1944 – Cucamonga, California
- 1953 – Guasti, California
- 1954 – Ontario, California; San Bernardino, California; Redlands, California
- 1966 – Guasti, California

- 1967 – Ontario, California; Fontana, California; San Bernardino South, California; Redlands, California
- 1973 – Guasti, California; Ontario, California
- 1976 – Ontario, California
- 1980 – Fontana, California; San Bernardino South, California; Redlands, California
- 1981 – Guasti, California; Ontario, California

Appendix E presents these maps.

In 1901, Southern Pacific Railroad, Santa Ana River, Slover Mountain, and local roads are visible. Some residential development is visible around Bloomington, Colton, and Redlands. No other significant structures are shown along the project alignment. I-10 is not yet visible.

In 1903, the western side of the project area shows some residential development in Pomona, Claremont, Ontario, and Upland. The project alignment is in between the Atchison Topeka and Santa Fe and the Southern Pacific Railroad.

In 1928, San Bernardino Avenue and Kingsley Avenue, south of the project alignment, are visible. Garey Avenue, Town(e) Avenue, and San Antonio Avenue, which run north-south, are also visible. Significant development has occurred southwest of the intersection of Kingsley Avenue and San Antonio Avenue.

In 1941, Valley Boulevard/US Route 70/US Route 99 is visible. This would later become I-10 in the Montclair-Ontario section of the project site. Archibald Avenue and Turner Avenue, running north-south, are visible, and development south of Valley Boulevard between these two north-south roads has occurred.

The 1942 topographic map shows the portion of Valley Boulevard/US Route 70/ US Route 99 to the LA/SB county line. Central Avenue and Benson Avenue, running north-south, are also visible. Few indications of structures are visible along the project alignment.

In 1944, Pomona College and Ontario City Hall are visible along US Route 70/US Route 99.

In 1953, I-10 (San Bernardino Freeway) is shown as under construction. The freeway is shown as taking a northwest direction from Valley Boulevard/US Route 70/US Route 99 at Archibald Avenue. The development between Archibald Avenue and Turner Avenue noted in the 1941 topographic map is identified as a winery. In addition, Ontario International Airport has been constructed.

In 1954, I-10 is visible in the western part of the alignment with two lanes in each direction, but it terminates at Rancho Avenue in Colton. The I-10 construction continues along the northwest direction (as noted in 1953 above) and levels off continuing west along the Ontario-Upland city boundary line, then turns southwest from the Ontario-Pomona city boundary line, levels off again at 5th Street/Helena Avenue, continuing west and then going southwest again after Mountain Avenue. More development is noted, with significant agricultural development in Fontana and Redlands. Visible structures of interest include:

- In Fontana – Kaiser Steel, a large steelmaking plant with oil tanks and slag dump and a large gravel pit
- In Bloomington – Morrow Field, sewage disposal (north of I-10), gravel pit
- In Colton – Slover Mountain, Cal Portland cement plant and quarry, large rail yard, sewage disposal (north of I-10, west of I-215)
- In San Bernardino – Tri-City Airport
- In Redlands – Oil tanks adjacent to future I-10 footprint

In 1966/1967, I-10 is visible throughout the entire alignment and is now four lanes in each direction except for (1) the stretch from the project's west terminus to Haven Avenue has three lanes in each direction; (2) a stretch between Mt. Vernon Avenue in Colton and I-215, which is two lanes westbound and three lanes eastbound; and (3) east of Waterman Avenue in San Bernardino, which is three lanes in each direction. More residential and agricultural development is noted. Visible changes and structures of interest include:

- In Montclair – Gravel pits located north and south of I-10 by the San Antonio Channel
- In Ontario –Ontario International Airport has been expanded significantly, with the runway lengthened eastward to Turner Avenue
- In Fontana – The steel plant slag dump has increased significantly, and industrial waste ponds have been added very close to I-10
- In Bloomington – The previously identified sewage disposal north of I-10 is no longer visible; however, a new sewage disposal facility is now located south of I-10.
- In Colton – Previously identified sewage disposal has expanded (north of I-10 and east of I-215), I-215 is now visible and has an interchange with I-10, and Colton Recreational Lake is now visible
- In San Bernardino – New sewage disposal, power plant
- In Redlands – Oil tanks directly south of I-10 at Nevada Avenue

In 1973, Ontario Motor Speedway is located north of I-10 and east of Haven Avenue. Residential and agricultural development continues to increase in the surrounding area.

In 1976, the I-10/I-15 northbound interchange is complete. A borrow pit is identified within the boundaries of Ontario International Airport.

In 1980/1981, I-10 has four lanes in each direction, except east of Waterman Avenue and west of Archibald Avenue, which still has three lanes in each direction. The I-10/I-15 (northbound and southbound) interchange is complete. More development is noted, with significant agricultural expansion in Loma Linda, San Bernardino, and Redlands. Other significant changes and new structures include:

- In Fontana – Steel plant industrial waste ponds are no longer visible
- In Bloomington – Large rail yard adjacent to I-10, Morrow Field Municipal Airport is marked "abandoned," large portion of Colton Recreational Lake is no longer visible

4.4.3 Fire Insurance Maps

From 1867 through 1970, Sanborn Fire Insurance Maps™ documented American cities by providing block-by-block detail of building structures and types of businesses. Most of the project site is situated in the urban areas of the cities of Pomona, Claremont, Upland, Montclair, Ontario, Fontana, Rialto, Colton, San Bernardino, Loma Linda, and Redlands. Copies of available Sanborn® fire insurance maps of the subject site and surrounding areas were obtained for the years: Colton – 1885, 1887, 1888, 1891, 1894, 1907, 1911, 1928, 1930, 1950, and 1960; Redlands – 1888, 1891, 1892, 1894, 1900, 1908, 1915, 1928, 1949, and 1955; Fontana – 1926, 1929 and 1938; and Loma Linda – 1928 and 1931 (TIS, 2008c). Appendix G presents copies of these Sanborn® fire insurance maps.

In 1885, Colton largely consisted of stores and livery stables. A large area of Colton was unoccupied. A blacksmith, an inoperative cannery, Colton Water Works, the Southern Pacific Rail Road, and many small stores were identified. No information was available for any other portion of the alignment in this year.

In 1887, Colton largely consisted of stores, livery stables, and hotels. Some of Colton was unoccupied. Blacksmiths, railroad coal bins, a freight house, the Assay Laboratory Furnace, and a coal room as part of the Colton Fruit Preserving Co. were identified. No information was available for any other portion of the alignment in this year.

In 1888, Colton largely consisted of stores, livery stables, and hotels. Most of Colton was occupied. More blacksmiths and a new freight depot were identified. Redlands was largely undeveloped. A lumber yard and buildings under construction were identified. No information was available for any other portion of the alignment in this year.

In 1891, Colton was largely unchanged, but sulphur bleaching houses were identified at the Colton Fruit Preserving Company. In Redlands, the city consisted largely of agricultural uses, specifically orange groves. The Southern Pacific railroad, lumber yards, and a few small stores were identified adjacent to the project alignment. No information was available for any other portion of the alignment in this year.

In 1892, Redlands was primarily orchards with a large hotel in the footprint of the future I-10. A fruit packing company with sulphur houses and Redlands Pipe Works with a pipe dipping furnace were identified south of the alignment. North of the Redlands portion of the alignment, a lumber yard, two blacksmiths, a grain warehouse, a planning mill, and coal oil in iron drums were identified. No information was available for any other portion of the alignment in this year.

In 1894, Colton was largely unchanged. A paint shop, pipe dip, coal sheds, and tank houses were identified north of the alignment. The alignment in Redlands remains largely unchanged, but there are more orchards and private homes adjacent to it. A gasoline tank has been identified at Redlands Pipe Works. No information was available for any other portion of the alignment in this year.

In 1900, Redlands has changed very little. A blacksmith was identified directly south of the alignment. Adjacent to the alignment, there has been significant residential development. No information was available for any other portion of the alignment in this year.

In 1907, Colton had changed very little. Lumber, fruit, and milling companies, a paint shop, and blacksmith have been identified adjacent to the alignment. The railroad coal bunker is no longer visible. No information was available for any other portion of the alignment in this year.

In 1908, Redlands has become more residential. Blacksmiths, a planing mill, and lumber yard were identified adjacent to the alignment. No information was available for any other portion of the alignment in this year.

In 1911, Colton has become more densely commercial. The area adjacent to the alignment has significant residential development. Directly north of the alignment, paint shops, tin shops, auto repair shops, a foundry, blacksmiths, sheet metal workings, and oil houses were identified. No information was available for any other portion of the alignment in this year.

In 1915, Redlands has become primarily residential. Many auto houses behind private homes have been identified. South of the alignment, a tin shop was identified. No information was available for any other portion of the alignment in this year.

In 1926, Fontana was primarily undeveloped. A ranch with a blacksmith was identified directly south of the alignment. No information was available for any other portion of the alignment in this year.

In 1928, Colton has developed residentially and industrially. Auto houses behind many private homes have been identified, as well as gas and oil facilities, a junk yard, auto wrecking, machine shops, garages, and auto repair shops. Additionally, Pennzoil Oil Co. and American Railway Express were identified along the alignment. Loma Linda is primarily undeveloped, but some residential housing was identified. Adjacent to the alignment, a gas and oil and auto repair shop was identified. Redlands has become primarily residential, with most homes having auto garages. Also identified were Lincoln Public School, Franklin School, gas and oil, and a large orange grove. No information was available for any other portion of the alignment in this year.

In 1929, Fontana is primarily agricultural. South of the alignment, farms, a feeding yard, and a machine shop were identified. North of the alignment, gas and oil facilities and an auto repair shop were identified. No information was available for any other portion of the alignment in this year.

In 1930, Colton changed very little from the 1928 map. A battery shop and gas and oil facilities were identified north of the alignment. No information was available for any other portion of the alignment in this year.

In 1931, Loma Linda has changed little from the 1928 map. No information was available for any other portion of the alignment in this year.

In 1938, Fontana has changed very little from the 1929 map. No information was available for any other portion of the alignment in this year.

In 1949, Redlands has had moderate residential development. The Orangedale Protective Association was identified within the alignment, and several oil tanks are visible. Adjacent to the alignment welding, auto repair, metal toy manufacturing, gas and oil facilities, paint, woodworking, sheet metal working, and glazing (part of the planing mill) were identified. Blackwell Military Academy and Southern California Edison Company were identified within the alignment. No information was available for any other portion of the alignment in this year.

In 1950, Colton has changed little from the 1930 map. Aluminum tubing, honey, and auto repair companies were identified within the alignment. No information was available for any other portion of the alignment in this year.

In 1955, Redlands has developed residentially. A textile knitting mill was identified adjacent to the alignment. No information was available for any other portion of the alignment in this year.

In 1960, I-10 was identified in Colton. The Globe Grain & Milling Co. is now vacant. Otherwise, little has changed from the 1950 map. No information was available for any other portion of the alignment in this year.

4.4.4 Recorded Land Title Records

As mentioned previously, a list of preliminary ROW acquisition properties that may have environmental concerns is presented in Section 4.1.3. The list will be finalized at later stages of the project. Title reports for the freeway ROW acquisition properties were not obtained and not reviewed for this report.

4.4.5 Building Department Records

A list of preliminary ROW acquisitions that may have environmental concerns is presented in Section 4.1.3. The list will be finalized at later stages of the project; therefore, building department records have not been obtained.

4.4.6 Zoning/Land Use Records

Most of the project site is situated in the urban areas of the cities of Pomona, Claremont, Montclair, Upland, Ontario, Fontana, Rialto, Colton, San Bernardino, Loma Linda, and Redlands. Most of the land use adjacent to the project alignment is commercial and industrial.

Zoning

There are several different categories of zoning along the proposed project alignment. The alignment is primarily adjacent to general commercial zoning, but it is also adjacent to large general industrial stretches and small pockets of residential zoning. Most of the adjacent general industrial zoning can be found in Bloomington, Rialto, and Colton, with some industrial zoning in Ontario, Fontana, and Redlands. Multi-family residential zoning can be found in Colton, San Bernardino, and Loma Linda. Single-family residential zoning can be found in Fontana, Loma Linda, and Redlands. Other zoning categories surrounding the proposed project include public institutional, regional mixed-use, regional commercial, light industrial, and public facilities (City of Ontario, 1998; City of Fontana, 2007; San Bernardino County, 2008; City of San Bernardino, 2007; City of Loma Linda, 2006; City of Redlands, 2007).

Land Use

According to the General Plans of the surrounding cities, there are several land uses immediately adjacent to the proposed project. Most of the land use surrounding the proposed project is general commercial and general industrial. Other land uses surrounding the proposed project

include multi-family residential, single-family residential, light industrial, public institutional, regional commercial, service commercial, and community industrial (City of Ontario, 2008; City of Fontana, 2003; San Bernardino County, 2008; City of San Bernardino, 2005; City of Loma Linda, 2006; City of Redlands, 1997).

4.4.7 Other Documents Reviewed

Four site assessments for ADL were conducted within the project corridor. These four documents are summarized below. All four reports had all soil samples analyzed for total lead following EPA Test Method 7420. Soil samples exhibiting total lead concentrations greater than or equal to 50 milligrams per kilogram (mg/kg) and less than 1,000 mg/kg were analyzed for soluble lead following EPA Test Method 7420 using Waste Extraction Test (WET) with citric acid as the extractant. Soil samples exhibiting total lead concentrations greater than 1,000 mg/kg were analyzed by the toxicity characteristic leaching procedure (TCLP).

Site Assessment for ADL – Route 10 from Eureka Street to Ford Street in Redlands (EA 47440). This study covers PM 30.7 to 33.1, which is approximately 2.5 miles of the project segment. The following is a summary of the samples analyzed and the conclusion made based on the analysis results.

- There were 514 soil samples analyzed for total lead. Concentrations ranged from below method detection limits (5 mg/kg) to 4,100 mg/kg.
- There were 145 soil samples that exhibited total lead concentrations greater than 50 mg/kg and less than 1,000 mg/kg. These samples were analyzed using the WET citric method. Concentrations ranged from 0.53 to 160 milligrams per liter (mg/L).
- There were 52 soil samples that exhibited total lead concentrations greater than 350 mg/kg. Five samples were randomly selected and analyzed by the WET DI method. The WET DI concentrations ranged from below method detection limits to 4.1 mg/L.
- There were 13 soil samples that exhibited total lead concentrations greater than 1,000 mg/L, and these were analyzed using the TCLP. Concentrations ranged from 1.2 to 21 mg/L.

Laboratory analytical results and statistical analysis of lead concentrations indicated that if the soil excavated at the site is to be reused on-site, then the upper 3 feet of soil should be placed under 1 foot of non-hazardous soil and at least 5 feet above the maximum groundwater level. If the upper 3 feet of soil excavated from the site is to be disposed, it has the potential to be classified as a hazardous waste according to California Code of Regulations Title 22.

Site Assessment for ADL – Route 10 from the 10/15 Interchange to the 10/215 Interchange, Eastbound Direction (EA 38430). This study covers PM 9.6 to 24.2, which is approximately

14.7 miles of the project segment. The following is a summary of the samples analyzed and the conclusion made based on the analysis results.

- There were 1,793 soil samples analyzed for total lead. Concentrations ranged from below method detection limits (5 mg/kg) to 2,600 mg/kg.
- There were 436 soil samples that exhibited total lead concentrations greater than 50 mg/kg and less than 1,000 mg/kg. These samples were analyzed using the WET citric method. Concentrations ranged below method detection limits (0.2 mg/L) to 140 mg/L.
- There were 22 soil samples that exhibited total lead concentrations greater than 350 mg/kg. Four samples were randomly selected and analyzed by the WET DI method. The WET DI concentrations ranged from 0.22 mg/L to 6.1 mg/L.
- There were 2 soil samples that exhibited total lead concentrations greater than 1,000 mg/L, and these were analyzed using the TCLP. Concentrations ranged from 0.46 to 5.8 mg/L.

Laboratory analytical results and statistical analysis of lead concentrations indicated that if the soil excavated at the site is to be reused on-site, then the upper 3 feet of soil should be placed under 1 foot of non-hazardous soil and at least 5 feet above the maximum groundwater level. If the upper 1 foot of soil excavated from the site is to be excavated, stockpiled, and disposed of separately, it has the potential to be classified as a hazardous waste according to California Code of Regulations Title 22. The underlying soil would not likely be considered hazardous. However, if the entire 3 feet of soil is disposed as a single unit, all soils would likely be considered hazardous with respect to lead content.

Site Assessment for ADL – Route 10 from the 10/15 Interchange to the 10/215 Interchange, Westbound Direction (EA 38430). This study covers PM 24.2 to 9.6, which is approximately 14.7 miles of the project segment. The following is a summary of the samples analyzed and the conclusion made based on the analysis results.

- There were 1,945 soil samples analyzed for total lead. Concentrations ranged from below method detection limits (5 mg/kg) to 1,000 mg/kg.
- There were 699 soil samples that exhibited total lead concentrations greater than 50 mg/kg and less than 1,000 mg/kg. These samples were analyzed using the WET citric method. Concentrations ranged below method detection limits (0.2 mg/L) to 130 mg/L.
- There were 460 soil samples that exhibited total lead concentrations less than 350 mg/kg and soluble lead concentrations greater than 5 mg/L. These samples were analyzed by the WET DI method. The WET DI concentrations ranged from below method detection limits to 3.2 mg/L.

- There were no samples analyzed using the TCLP method because no samples exhibited total lead concentrations greater than 1,000 mg/L.

Laboratory analytical results and statistical analysis of lead concentrations indicated that if the soil excavated at the site is to be reused on-site, then the upper 3 feet of soil should be placed under 1 foot of non-hazardous soil and at least 5 feet above the maximum groundwater level. If the upper 6 inches of soil excavated from the site is to be excavated, stockpiled, and disposed of separately, it has the potential to be classified as a hazardous waste according to California Code of Regulations Title 22. The underlying soil would not likely be considered hazardous. However, if the entire 5 feet of soil is disposed as a single unit, all soils would likely be considered hazardous with respect to lead content.

Aerial Lead Investigation – Interstate 10 Freeway (PM 26.0/27.5) from Tippecanoe Avenue to Mountain View Avenue, San Bernardino County (EA 3528U0). This study covers PM 26.0 to 27.5, which is approximately 1.5 miles of the project segment. The following is a summary of the samples analyzed and the conclusion made based on the analysis results.

- There were 600 soil samples analyzed for total lead. Concentrations ranged from below method detection limits (5 mg/kg) to 2,700 mg/kg.
- There were 157 soil samples that exhibited total lead concentrations greater than 50 mg/kg and less than 1,000 mg/kg. These samples were analyzed using the WET citric method. Concentrations ranged below method detection limits (0.2 mg/L) to 140 mg/L.
- There were 7 soil samples that exhibited total lead concentrations greater than 1,000 mg/L, and these were analyzed using the TCLP. Concentrations ranged from 13 to 36 mg/L.

Laboratory analytical results and statistical analysis of lead concentrations indicated that soils from zero to 0.15 m in the investigation area meet the DTSC Variance (dated September 22, 2000) requirements for reuse within the Caltrans ROW (Apex, 2002).

Chapter 5 Information from Site Reconnaissance and Interviews

Parsons conducted reconnaissance of the site on October 28, 2013. Appendix C presents photographs taken during the site reconnaissance.

5.1 Hazardous Substances in Connection with Identified Uses

Wooden utility poles along roadside and railroad ties in the rail yard in Colton may be coated with creosote. These wooden poles and rail ties would need to be properly managed if removed and disposed. No other hazardous substances were identified during the site reconnaissance.

5.2 Hazardous Substance Containers and Unidentified Substance Containers

No hazardous substance containers or unidentified substance containers were observed at the subject site during the site reconnaissance.

5.3 Storage Tanks

Based on available information, storage tanks were not expected to have been located at the subject site. Chapter 4 provides information on USTs located in the project vicinity. No storage tanks were observed within the project footprint during the site reconnaissance.

5.4 Indications of PCBs

Based on available information, no equipment or materials possibly containing PCBs were identified to have been used at the subject site.

5.5 Indications of Asbestos

During the site reconnaissance, possible ACM was observed at the site. An estimated 64 bridges would be affected during construction of the proposed project. Table 5-1 identifies the bridges being modified by the proposed project. As per South Coast Air Quality Management District Rule 1403, all bridges/structures scheduled for demolition/renovation are required to have an asbestos survey regardless of the type or age. These structures possibly containing ACM constitute an REC for the project alignment.

5.6 Indications of Solid Waste Disposal

Other than miscellaneous roadside trash that had been deposited at the project location, either intentionally or unintentionally (i.e., windblown), no solid waste was observed at the site during the site reconnaissance. No dumping grounds were observed. Based on available information, no portion of the project site is currently or previously designated as a solid waste disposal site.

5.7 Physical Setting Analysis, if Migrating Hazardous Substances Are an Issue

A limited number of sites and facilities within ASTM search distances from the project site have been identified in environmental databases. Migrating hazardous substances were identified as an issue for the project site and were discussed in Chapter 4 in the discussion of the LUST database.

5.8 Lead

During the site reconnaissance, paint used for lane striping was observed along the roadways. Lane striping paint may contain LBP or other hazardous materials and may exceed hazardous waste criteria under CCR Title 22 and require disposal in a Class I disposal site. This constitutes an REC for the project location.

Any structures acquired as part of the project should be analyzed, as well as the list of bridges affected by the proposed project (see Table 5-1). Any painted areas on these structures should be tested for LBP. These structures possibly containing LBP constitute an REC for the project alignment.

ADL is common in the immediate vicinity of freeways and highways due to lead from gasoline engine emissions. Several ADL sampling studies have been conducted along the proposed project corridor. The study limits of these past reports cover approximately 18.7 miles of the project limits, leaving approximately 14.3 miles of untested portions of I-10. These reports are more fully discussed in Section 4.4.7, Other Documents Reviewed.

The probability that ADL may be present at similar concentrations along the shoulders of the remaining untested portions of the proposed corridor is likely. Caltrans concurs with the assumption that untested portions within the proposed project limits would have similar levels of ADL as areas that have been previously tested because they have similar traffic volumes, and an exemption from ADL testing has been granted (Caltrans, 2008). This constitutes an REC for the project location.

5.9 Interviews

No interviews were conducted as part of the ISA.

5.10 Other Observed Conditions

Other conditions of concern identified during site reconnaissance include the following:

- At Ford Street and I-10, a warning sign was posted for high-pressure gas lines. It was unclear if the gas lines were perpendicular to I-10 or parallel to I-10.
- There was evidence of stressed vegetation along the shoulders of I-10. This appeared to be related to lack of water and/or fire and not due to hazardous substances.
- Several call boxes and electrical signal/street sensor boxes are located along the shoulders of I-10.
- There is a storm drain and associated valves on the north side of the Ford Street on-ramp to westbound I-10. This valve appears to drain rainwater onto the surrounding land.

None of these conditions constitutes an REC for the project location.

This page intentionally left blank.

Chapter 6 Findings

6.1 Findings Summary

In conclusion, based on the definition of an REC in the ASTM Standard Practice E 1527-05, the following RECs have been identified for the site:

- One LUST incidence is currently undergoing remedial activities. The Former M&M Smog and Muffler facility, previously located at 1915 East Tippecanoe Avenue in San Bernardino, discharged gasoline and diesel fuel that affected the aquifer. This property is scheduled to be acquired as part of the I-10 Corridor Project. As such, hazardous materials are within the project footprint.
- Wooden utility poles along the roadside and rail ties in the rail yard are assumed to be coated with creosote, a wood preservative containing phenol derivatives and toxic hydrocarbons [refer to the EPA's Preliminary Risk Assessment for Creosote (http://www.epa.gov/pesticides/factsheets/chemicals/creosote_prelim_risk_assess.htm) and the Agency for Toxic Substances and Disease Registry's ToxFAQs for Creosote (http://www.atsdr.cdc.gov/toxfaqs/tf.asp?id=65&tid=18)]. These wooden poles and rail ties would need to be properly managed if removed and disposed. However, removal of rail ties is not anticipated at this time. According to Southern California Edison (SCE), where poles are removed and the poles are not located in the same position, the holes are typically backfilled with sand slurry, and sometimes capped with concrete and/or asphalt, depending on the location. Post pole-removal soil analysis is only recommended if soil discoloration is observed.
- ACMs are suspected to be present in the following bridge components: bridge joint compound materials, bridge rail leveling shims, concrete and asphalt, as well as, in several structures on preliminarily identified parcels for acquisition. South Coast Air Quality Management District Rule 1403 requires an asbestos survey of any bridge/structure undergoing demolition/renovation regardless of the type or age. ACMs that may be disturbed during construction activities should be managed according to Cal-OSHA regulations (Title 8, CCR, Section 1529).
- Paint used for lane striping may contain LBP or other hazardous materials, and paint used in structures on preliminarily identified parcels for acquisition may exceed hazardous waste criteria under CCR Title 22 and require disposal in a Class I disposal site. Any structures acquired as part of the project should be analyzed, as well as the list of bridges affected by the proposed project (see Table 5-1). Any painted areas on these structures should be tested

for LBP. It is recommended that the paint used for lane striping and in structures to be acquired be tested for LBP prior to removal to determine proper disposal methods.

- Previous ADL sampling has been conducted along the corridor covering approximately 18.7 miles of the approximately 33-mile-long corridor. Those results indicated ADL was present in the soils along the shoulders of I-10. While the probability that ADL may be present in similar concentrations along the shoulders of I-10 is highly likely and even though an exemption for additional ADL sampling in the untested portions of the project corridor has been granted by Caltrans District 8 (Caltrans, 2008), it is the opinion of the environmental professional that soils along the shoulders of the I-10 Corridor Project be retested for ADL and a Site Assessment for Aerially Deposited Lead be prepared. The previously conducted studies are over a decade old. During the last 10 years, several of these projects have been started, and the soils along the shoulders of the I-10 Corridor Project within these areas may no longer be considered hazardous materials. As a result, additional non-hazardous soils may not need to be brought in to cover potentially contaminated soils, and the soils currently along the shoulders of the I-10 Corridor Project may no longer be considered hazardous. The Site Assessment for Aerially Deposited Lead should discuss the following:
    - a detailed description of where the ADL is located on the project site including the length, width and depth of the contamination;
    - a determination of the Caltrans "soil type" (X, Y1, Y2, Z2, or Z3) that is found during the survey;
    - a discussion of how the soil will be reused on the project in accordance with the DTSC issued Variance or if the soil will required off-site disposal; and
    - a discussion of the Caltrans Special Provisions required to be followed.

  Since the project is in the preliminary design phase, the exact location of where the ADL sampling should occur cannot be determined until project design is closer to being finalized.
- Several parcels have been preliminarily identified for acquisition. Several of these parcels have or have had USTs or ASTs located on them. These parcels will need to be surveyed to determine whether any USTs or ASTs are located within an area identified for acquisition. Identified parcels should be surveyed during the Project Approval/Environmental Documentation phase of the project. If USTs are located within the area to be acquired, proper removal procedures in accordance with Section 2672 (for USTs) of Title 23 of the California Code of Regulations as implemented by the local Regional Water Quality Control Board should be followed. Minimum requirements for AST removal include removal of tank contents (including material in associated piping); tank contents, including rinsate and tank decontamination products, to be managed as hazardous waste; and tank atmosphere to be rendered vapor free (for tanks that held flammable/combustible products). If the USTs or

ASTs contain hazardous materials, soils surrounding the tanks should be collected and analyzed for said hazardous materials after the removal of the tanks to determine proper handling and disposal requirements.

- Herbicides and pesticides may be present along the project location where historic and current agricultural activities occur. It is recommended that soil samples be collected and analyzed for herbicides and pesticides to determine proper handling and disposal requirements.

This page intentionally left blank.

Chapter 7 Opinion

Based on the findings of our assessment, the environmental professionals provide the following opinions on the observed conditions.

The following RECs have been identified for the site:

- Miscellaneous hazardous materials – Hazardous materials were historically spilled and found on and near the project location. Remedial activities are ongoing at the site located at 1915 East Tippecanoe Avenue in San Bernardino, with closure of the open assessment at this location to be completed by the end of 2014. No additional remedial activities would need to be conducted at this site if closure is obtained. If closure is not obtained, current remedial activities would need to be continued until the assessment can be closed. In addition, several parcels preliminarily identified for acquisition contain USTs and ASTs. The contents of these tanks are unknown. Proper removal procedures should be followed if these tanks are to be removed. If the USTs or ASTs contain hazardous materials, soils surrounding the tanks should be collected and analyzed for said hazardous materials after the removal of the tanks to determine proper handling and disposal requirements.
- Creosote – Wooden utility poles along the roadside and rail ties in the rail yard are assumed to be coated with creosote. The wooden poles and rail ties should be properly managed if they are to be removed or relocated. The relocation and management of the wooden utility poles is usually the responsibility of the utility company. Based on preliminary design, the rail ties should not be removed. Where poles are removed and the poles are not located in the same position, the holes should be backfilled with sand slurry or capped with concrete and/or asphalt, depending on the location. Post pole-removal soil analysis is only recommended if soil discoloration is observed.
- ACM – ACM may be present in the following bridge components: bridge joint compound materials, bridge rail leveling shims, concrete and asphalt, as well as, in several structures on preliminarily identified parcels for acquisition. South Coast Air Quality Management District Rule 1403 requires an asbestos survey of any bridge/structure undergoing demolition/renovation regardless of the type or age. ACM that may be disturbed during construction activities should be managed according to Cal-OSHA regulations (Title 8, CCR, Section 1529). Surveys on bridges should be performed prior to finalization of the Caltrans Project Approval/Environmental Document phase of the project. Surveys on structures to be acquired should be performed during right-of-way demolition.
- LBP – Paint used for lane striping may contain LBP or other hazardous materials, and paint used in structures on preliminarily identified parcels for acquisition may exceed hazardous

waste criteria under CCR Title 22 and require disposal in a Class I disposal site. Any structures acquired as part of the project should be analyzed, as well as the list of bridges affected by the proposed project (see Table 5-1). Any painted areas on these structures should be tested for LBP. As a result, paint should be sampled for LBP to determine proper handling and disposal requirements. It is recommended that the paint used for lane striping and in structures to be acquired be tested for LBP prior to removal to determine proper disposal methods. Surveys should be performed prior to finalization of the Caltrans Project Approval/Environmental Document phase of the project. Survey on structures to be acquired should be performed during right-of-way demolition.

- ADL – ADL may be present along the shoulders of I-10 within the project corridor. Previous ADL sampling has been conducted along the corridor, covering approximately 18.7 miles of the approximately 33-mile-long corridor. Those results indicated ADL was present in the soils along the shoulders of I-10. While the probability that ADL may be present in similar concentrations along the shoulders of I-10 is highly likely, and even though an exemption for additional ADL sampling in the untested portions of the project corridor has been granted by Caltrans District 8 (Caltrans, 2008), soils along the shoulders of the I-10 Corridor Project be retested for ADL and a Site Assessment for Aerially Deposited Lead be prepared. The previously conducted studies are over a decade old. During the last 10 years, several of these projects have been started, and the soils along the shoulders of the I-10 Corridor Project within these areas may no longer be considered hazardous materials. As a result, additional non-hazardous soils may not need to be brought in to cover potentially contaminated soils, and the soils currently along the shoulders of the I-10 Corridor Project may no longer be considered hazardous. The Site Assessment for Aerially Deposited Lead should discuss the following:
    - a detailed description of where the ADL is located on the project site including the length, width and depth of the contamination;
    - a determination of the Caltrans "soil type" (X, Y1, Y2, Z2, or Z3) that is found during the survey;
    - a discussion of how the soil will be reused on the project in accordance with the DTSC issued Variance or if the soil will required off-site disposal; and
    - a discussion of the Caltrans Special Provisions required to be followed.

Surveys should be performed prior to finalization of the Caltrans Project Plans, Specifications and Estimate phase of the project. Since the project is in the preliminary design phase, the exact location of where the ADL sampling should occur cannot be determined until project design is closer to being finalized.

- Herbicides and Pesticides – Herbicides and pesticides may be present along the project location where historic and current agricultural activities occur. It is recommended that soil

samples be collected and analyzed for herbicides and pesticides to determine proper handling and disposal requirements. Surveys should be performed prior to finalization of the Caltrans Project Approval/Environmental Document phase of the project.

Chapter 8 Conclusions

Parsons has conducted this Phase I ISA in general accordance with ASTM Standard Practice E 1527-05, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*, as applicable. This assessment has revealed no evidence of RECs in connection with the subject property, except for the following:

- Miscellaneous hazardous materials
- Creosote on wooden utility poles and potentially in soils at the base of the poles
- ACM in the following bridge components: bridge joint compound materials, bridge rail leveling shims, concrete and asphalt, and in structures identified for acquisition
- LBP in lane striping, in structures identified for acquisition, and on bridges/structures identified for demolition/renovation
- ADL in soils

This page intentionally left blank.

Chapter 9 Deviations and Data Gaps

9.1 Deviations

Deviations to the ASTM standard in conducting this ISA include the following non-scope items: ACM and LBP.

9.2 Data Gaps

The following data gaps have been identified for the report. These are not considered to be significant.

- The site reconnaissance was limited to observation of drive-by conditions and limited access near the alignment.
- Right-of-entry permits were not obtained for access to the entire project alignment.
- Title records were not obtained for properties scheduled for acquisition.
- Building Department records were not obtained for properties scheduled for acquisition.
- Interviews were not conducted as part of this ISA. Enough information was contained within the database report and through additional research conducted by Parsons to determine RECs.
- With the exception of the NPL and RCRA TSDF databases, the databases search distance was set at 0.25-mile due to the large size of the project area. This search distance was previously approved by Caltrans District 8. Search distances for NPL and RCRA TSDF sites were conducted at 1.0 mile and 0.50 mile, respectively, as required by the ASTM standard.

Chapter 11 Signature(s) of Environmental Professional(s)

Parsons declares that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in Section 312.10 of Title 40, CFR, Part 312 dated 1 November 2005.

I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed all of the appropriate inquires in conformance with the standards and practices set forth in 40 CFR 312.

Project Information

District 8 County LA/SBD Route 10 Post Mile 07-LA-10-PM44.9/PM48.3 and 08-SB-10-00.0/PM37.0 EA OC2500

Description: The California Department of Transportation (Caltrans), in cooperation with the San Bernardino Associated Governments (SANBAG), proposes to add freeway lanes through all or a portion of the 33-mile stretch of Interstate 10 (I-10) from the Los Angeles/San Bernardino (LA/SB) County Line to Ford Street in San Bernardino County. The project limits including transition areas extend from approximately 0.4 miles west of White Avenue in the City of Pomona at Post Mile (PM) 44.9 to Live Oak Canyon Road in the City of Yucaipa at PM 37.0.

Is the project on the HW Study Minimal-Risk Projects List (HW1)? NO

Project Manager Mr. Raghuram Radhakrishnan phone# (909)383-6288
Project Engineer Mr. Gideon Agra phone # (909) 383-2059

Project Screening

Attach the project location map to this checklist to show location of all known and/or potential HW sites identified.

1. Project Features: New R/W? YES Excavation? YES Railroad Involvement? YES
   Structure demolition/modification? YES Subsurface utility relocation? YES
2. Project Setting Approximately 2 miles west of the Los Angeles/San Bernardino county line in the City of Pomona to Ford Street in the City of Redlands
   Rural or Urban Urban
   Current land uses I-10.
   Adjacent land uses industrial, commercial, railroad, and residential
   (industrial, light industry, commercial, agricultural, residential, etc.)
3. Check federal, State, and local environmental and health regulatory agency records as necessary, to see if any known hazardous waste site is in or near the project area. If a known site is identified, show its location on the attached map and attach additional sheets, as needed, to provide pertinent information for the proposed project.
4. Conduct Field Inspection. Date October 24, 2009

STORAGE STRUCTURES / PIPELINES:

Underground tanks	YES	Surface tanks	NO
Sumps	NO	Ponds	NO
Drums	NO	Basins	NO
Transformers	NO	Landfill	NO

Other None identified

Initial Site Assessment (ISA) Checklist
(Continued)

CONTAMINATION: (spills, leaks, illegal dumping, etc.)

Surface staining NO Oil sheen NO

Odors NO Vegetation damage NO

Other Possible ADL contamination along roadside

HAZARDOUS MATERIALS: (asbestos, lead, etc.)

Buildings YES Spray-on fireproofing NO

Pipe wrap NO Friable tile NO

Acoustical plaster NO Serpentine NO

Paint: Paint used for lane striping may contain lead-based paint (LBP) or other hazardous materials and used in structures identified for acquisition may exceed hazardous waste criteria under Title 22, California Code of Regulations, and require disposal in a Class I disposal site.

Other ACM may be present in expansion joint compound materials on bridges/overcrossings and in structures identified for acquisition. If sampling has not been previously conducted, then ACM may be present on these structures. Wooden utility poles and rail ties may be coated with creosote.

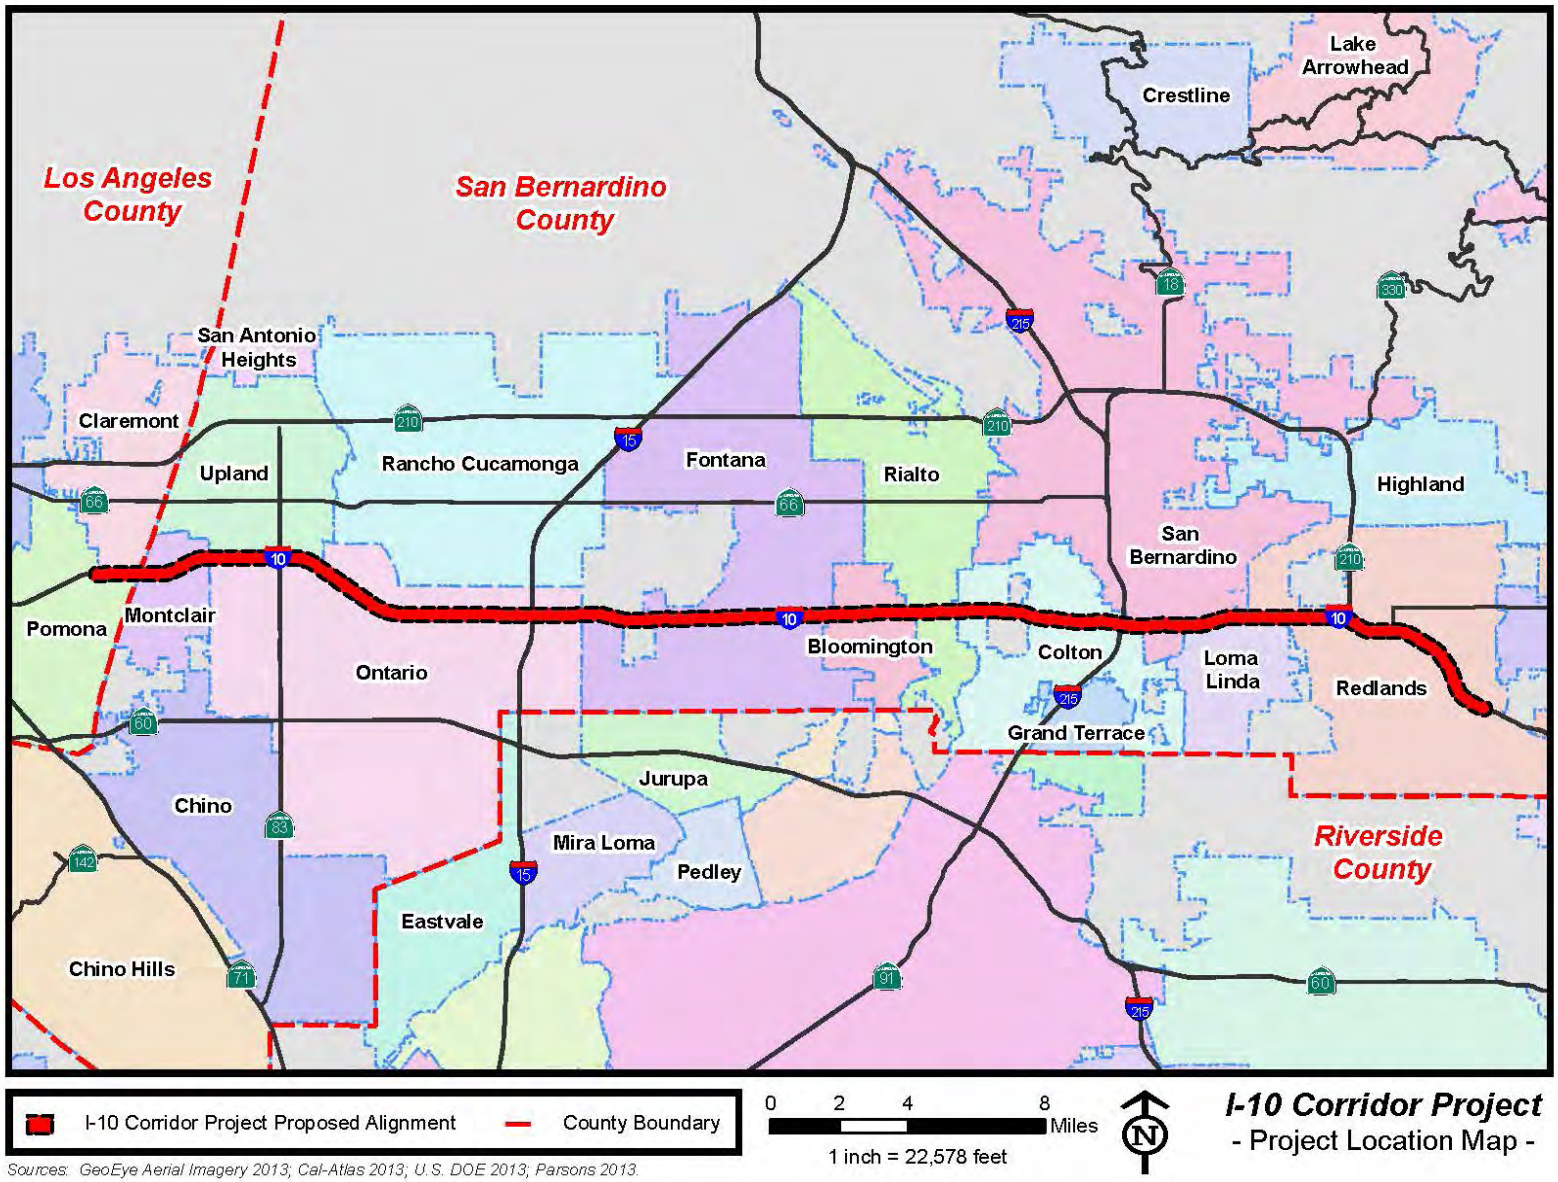
5. Additional record search, as necessary, of subsequent land uses that could have resulted in a hazardous waste site.

6. Other comments and/or observations: For item #3 and 5, see the attached ISA. Multiple sites identified in the database reports constituted an REC for the project. The former M&M Smog and Muffler site located at 1915 Tippecanoe in San Bernardino discharged gasoline, which affected soil and groundwater. Remediation activities are ongoing. Several properties have preliminarily been identified for acquisition. Concerns at these properties include USTs, LBP and ACM. See the attached ISA for more details

ISA Determination

Does the project have potential hazardous waste involvement? Yes If there is known or potential hazardous waste involvement, is additional ISA work needed before task orders can be prepared for the Investigation? Yes If "YES," explain; then give an estimate of additional time required:
LBP, ACM, and ADL surveys should all be conducted if they have not been already as parts of other projects. LBP and ACM surveys should take approximately 4 to 6 weeks (for sampling and report generation). ADL surveys would take approximately 4 to 6 weeks (for sampling and report generations).

A brief memo should be prepared to transmit the ISA conclusions to the Project Manager and Project Engineer.



ISA Conducted by Angela K Schnapp **Date** March 28, 2014

Appendix C Photographs of Project Site and Vicinity

Photo 1: Looking north along Ford Street – the gas line posting is seen, along with the Ford Street overcrossing on I-10.

Photo 2: Looking southwest at the property located at 1915 E. Tippecanoe – former site of M&M Smog and Muffler. Most of the former structures have been removed. Site remediation continues.

Photo 3: Looking south at the property located at 1915 E. Tippecanoe – former site of M&M Smog and Muffler. Some remnants of the structures remain (the blue concrete). Site remediation continues. Workers were onsite filling sandbags on the day of the visit.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified.

The Map ID column refers to the Map ID-Focus Map(s) of the listed site.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

FEDERAL RECORDS

CERCLIS: The Comprehensive Environmental Response, Compensation and Liability Information System contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the CERCLIS list, as provided by EDR, and dated 04/26/2013 has revealed that there is 1 CERCLIS site within the searched area.

Site	Address	Map ID
PONZI SCHEME PAINTS 2	2830 OLD GUASTI ROAD	429-10

CERC-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 04/26/2013 has revealed that there is 1 CERC-NFRAP site within the searched area.

Site	Address	Map ID
ERICKSON INC. - FONTANA	***13738 SLOVER AVE.***	***629-13***

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 07/11/2013 has revealed that there is 1 CORRACTS site within the searched area.

Site	Address	Map ID
ERICKSON INC. - FONTANA	***13738 SLOVER AVE.***	***629-13***

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 07/11/2013 has revealed that there are

EXECUTIVE SUMMARY

27 RCRA-LQG sites within the searched area.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 07/11/2013 has revealed that there is 1 RCRA-CESQG site within the searched area.

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 07/11/2013 has revealed that there are 15 RCRA NonGen / NLR sites within the searched area.

PADS: The PCB Activity Database identifies generators, transporters, commercial storers and/or brokers and disposers of PCBs who are required to notify the United States Environmental Protection Agency of such activities. The source of this database is the U.S. EPA.

A review of the PADS list, as provided by EDR, and dated 11/01/2012 has revealed that there is 1 PADS site within the searched area.

Site	Address	Map ID
COLTON CITY ELEC DEPT	***150 S 10TH ST***	***561-18,19***

FINDS: The Facility Index System contains both facility information and "pointers" to other sources of information that contain more detail. These include: RCRIS; Permit Compliance System (PCS); Aerometric Information Retrieval System (AIRS); FATES (FIFRA [Federal Insecticide Fungicide Rodenticide Act] and TSCA Enforcement System, FTTS [FIFRA/TSCA Tracking System]; CERCLIS; DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes); Federal Underground Injection Control (FURS); Federal Reporting Data System (FRDS); Surface Impoundments (SIA); TSCA Chemicals in Commerce Information System (CICS); PADS; RCRA-J (medical waste transporters/disposers); TRIS; and TSCA. The source of this database is the U.S. EPA/NTIS.

A review of the FINDS list, as provided by EDR, and dated 03/08/2013 has revealed that there are 192 FINDS sites within the searched area.

RMP: When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

A review of the RMP list, as provided by EDR, and dated 05/08/2012 has revealed that there are 5 RMP sites within the searched area.

US AIRS: The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

A review of the US AIRS list, as provided by EDR, and dated 01/23/2013 has revealed that there is 1

US AIRS site within the searched area.

CUPA Listings: A listing of sites included in the county?s Certified Unified Program Agency database. California?s Secretary for Environmental Protection established the unified hazardous materials and hazardous waste regulatory program as required by chapter 6.11 of the California Health and Safety Code. The Unified Program consolidates the administration, permits, inspections, and enforcement activities.

A review of the CUPA Listings list, as provided by EDR, has revealed that there is 1 CUPA Listings site within the searched area.

CERTIFIED ENVIRONMENTAL TRNSPT	***15568 SLOVER AVE***	***592-14***

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are

EXECUTIVE SUMMARY

DEED: The use of recorded land use restrictions is one of the methods the DTSC uses to protect the public from unsafe exposures to hazardous substances and wastes .

A review of the DEED list, as provided by EDR, and dated 06/10/2013 has revealed that there are 3 DEED sites within the searched area.

Site	Address	Map ID
NEOVIA LOGISTICS SERVICES, LLC	***5101 E AIRPORT DR***	***637-12***
EDISON/COLTON 2 (10TH ST) MGP	***EAST OF 10TH STREET, SO***	***643-18,19***
EDISON/REDLANDS II (REDLANDS B	***501-525 W. REDLANDS BL.***	***715-23***

VCP: Contains low threat level properties with either confirmed or unconfirmed releases and the project proponents have request that DTSC oversee investigation and/or cleanup activities and have agreed to provide coverage for DTSC's costs.

A review of the VCP list, as provided by EDR, and dated 09/05/2013 has revealed that there are 4 VCP sites within the searched area.

Site	Address	Map ID
LAMONK PROPERTY	***1602 STEEL ROAD***	***597-19***
EDISON/COLTON 2 (10TH ST) MGP	***EAST OF 10TH STREET, SO***	***643-18,19***
SO CAL GAS/REDLANDS I (STATE S	***STATE STREET AT REDLAND***	***714-23***
EDISON/REDLANDS II (REDLANDS B	***501-525 W. REDLANDS BL.***	***715-23***

RESPONSE: Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

A review of the RESPONSE list, as provided by EDR, and dated 09/05/2013 has revealed that there is 1 RESPONSE site within the searched area.

Site	Address	Map ID
NEOVIA LOGISTICS SERVICES, LLC	***5101 E AIRPORT DR***	***637-12***

HAZNET: The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000-1,000,000 annually, representing approximately 350,000-500,000 shipments. Data from non-California manifests & continuation sheets are not included at the present time. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, & disposal method. The source is the Department of Toxic Substance Control is the agency

A review of the HAZNET list, as provided by EDR, and dated 12/31/2012 has revealed that there are 1446 HAZNET sites within the searched area.

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 09/05/2013 has revealed that there are

EXECUTIVE SUMMARY

9 ENVIROSTOR sites within the searched area.

Used oil transfer facility: No
Used oil transporter: No

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Violation Status: No violations found

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport,

Map ID	Site	Database(s)	EPA ID Number

SHELL SERVICE STATION (Continued) **1005415505**

and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Handler Activities Summary:

U.S. importer of hazardous waste:	No
Mixed waste (haz. and radioactive):	No
Recycler of hazardous waste:	No
Transporter of hazardous waste:	No
Treater, storer or disposer of HW:	No
Underground injection activity:	No
On-site burner exemption:	No
Furnace exemption:	No
Used oil fuel burner:	No
Used oil processor:	No
User oil refiner:	No
Used oil fuel marketer to burner:	No
Used oil Specification marketer:	No
Used oil transfer facility:	No
Used oil transporter:	No

Violation Status: No violations found

FINDS:

Registry ID: 110002613208

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D018
Waste name: BENZENE

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D011
Waste name: SILVER

Waste code: D018
Waste name: BENZENE

Violation Status: No violations found

FINDS:

Registry ID: 110012227401

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Used oil transporter: No

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE

Map ID	Site	Database(s)	EPA ID Number

HOME DEPOT USA INC HD 0687 (Continued) **1008879848**

MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D009
Waste name: MERCURY

Waste code: D016
Waste name: 2,4-D

Waste code: D018
Waste name: BENZENE

Waste code: D035
Waste name: METHYL ETHYL KETONE

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F005
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Violation Status: No violations found

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D017
Waste name: 2,4,5-TP (SILVEX)

Waste code: D035
Waste name: METHYL ETHYL KETONE

Violation Status: No violations found

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:
Waste code: 214
Waste name: 214

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: F002
Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2-TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE LISTED IN F001, F004, OR F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: U002
Waste name: ACETONE (I)

Waste code: U165
Waste name: NAPHTHALENE

Waste code: U220
Waste name: BENZENE, METHYL-

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport,

Map ID	Site	Database(s)	EPA ID Number

CHEVRON STATION NO 99131 (Continued) **1006805184**

and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Waste code: D009
Waste name: MERCURY

Violation Status: No violations found

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D039
Waste name: TETRACHLOROETHYLENE

Violation Status: No violations found

FINDS:

Registry ID: 110002935469

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Map ID	Site	Database(s)	EPA ID Number

TEXACO SERVICE STATION (Continued) **1001967465**

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D018
Waste name: BENZENE

Violation Status: No violations found

FINDS:

Registry ID: 110002934585

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:
Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D008

User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Violation Status: No violations found

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

User oil refiner:	No
Used oil fuel marketer to burner:	No
Used oil Specification marketer:	No
Used oil transfer facility:	No
Used oil transporter:	No

Hazardous Waste Summary:

Waste code:	D001
Waste name:	IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code:	D018

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D009
Waste name: MERCURY

Waste code: F001
Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLOROETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE, AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F005
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Environmental Interest/Information System
The NEI (National Emissions Inventory) database contains information

Map ID	Site	Database(s)	EPA ID Number

BMCA INSULATION PRODUCTS INC (Continued) **1001217356**

on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CA WDS:

Facility ID:	Santa Ana River 36I005832
Facility Type:	Industrial - Facility that treats and/or disposes of liquid or semisolid wastes from any servicing, producing, manufacturing or processing operation of whatever nature, including mining, gravel washing, geothermal operations, air conditioning, ship building and repairing, oil production, storage and disposal operations, water pumping.
Facility Status:	Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.
NPDES Number:	CAS000001 The 1st 2 characters designate the state. The remaining 7 are assigned by the Regional Board
Subregion:	8
Facility Telephone:	9093908811
Facility Contact:	RICHARD VREDENBURG
Agency Name:	BMCA INSULATION PROD INC
Agency Address:	300 N Haven Ave
Agency City,St,Zip:	Ontario 917611210
Agency Contact:	RICHARD VREDENBURG
Agency Telephone:	9093908811
Agency Type:	Private
SIC Code:	0
SIC Code 2:	Not reported
Primary Waste:	Not reported
Primary Waste Type:	Not reported
Secondary Waste:	Not reported
Secondary Waste Type:	Not reported
Design Flow:	0
Baseline Flow:	0
Reclamation:	Not reported
POTW:	Not reported
Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

CALIFORNIA REBUILD AUTO (Continued) **1004675435**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Used oil transfer facility:	No
Used oil transporter:	No

Hazardous Waste Summary:

Waste code: D000
Waste name: Not Defined

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D039
Waste name: TETRACHLOROETHYLENE

Violation Status: No violations found

FINDS:

Registry ID: 110002933684

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:
Waste code: 181
Waste name: 181

Waste code: 331
Waste name: 331

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D007
Waste name: CHROMIUM

Hazardous Waste Summary:
- Waste code: 181
- Waste name: 181

- Waste code: 331
- Waste name: 331

- Waste code: D001
- Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

- Waste code: D007
- Waste name: CHROMIUM

- Violation Status: No violations found

Hazardous Waste Summary:

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Waste code: D006
Waste name: CADMIUM

Waste code: D007
Waste name: CHROMIUM

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HAZARDOUS WASTE BIENNIAL REPORTER

CA WDS:

Facility ID: Santa Ana River 36I017280
Facility Type: Industrial - Facility that treats and/or disposes of liquid or semisolid wastes from any servicing, producing, manufacturing or processing operation of whatever nature, including mining, gravel washing, geothermal operations, air conditioning, ship building and repairing, oil production, storage and disposal operations, water pumping.
Facility Status: Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.
NPDES Number: CAS000001 The 1st 2 characters designate the state. The remaining 7 are assigned by the Regional Board
Subregion: 8
Facility Telephone: 9096050206

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Description: Handler: generates 1,000 kg or more of hazardous waste during any calendar month; or generates more than 1 kg of acutely hazardous waste during any calendar month; or generates more than 100 kg of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste during any calendar month; or generates 1 kg or less of acutely hazardous waste during any calendar month, and accumulates more than 1 kg of acutely hazardous waste at any time; or generates 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste during any calendar month, and accumulates more than 100 kg of that material at any time

Handler Activities Summary:

U.S. importer of hazardous waste:	No
Mixed waste (haz. and radioactive):	No
Recycler of hazardous waste:	No
Transporter of hazardous waste:	No
Treater, storer or disposer of HW:	No
Underground injection activity:	No
On-site burner exemption:	No
Furnace exemption:	No
Used oil fuel burner:	No
Used oil processor:	No
User oil refiner:	No
Used oil fuel marketer to burner:	No
Used oil Specification marketer:	No
Used oil transfer facility:	No
Used oil transporter:	No

Violation Status: No violations found

POTW: Not reported
Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code:	135
Waste name:	135
Waste code:	214
Waste name:	214
Waste code:	343
Waste name:	343
Waste code:	D001
Waste name:	IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS

Map ID	Site	Database(s)	EPA ID Number

ESSEX BROWNELL ONTARIO WAREHOUSE (Continued) **1014387948**

CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Waste code: D035
Waste name: METHYL ETHYL KETONE

Violation Status: No violations found

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D039
Waste name: TETRACHLOROETHYLENE

Violation Status: No violations found

FINDS:

Registry ID: 110002939535

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
