Attention: Anne Kocheon

Subject: Initial Site Assessment Addendum
West Valley Connector Project
Potential Operations & Maintenance Facility Sites
Group Delta Project No. EN119

Dear Ms. Kocheon:

Group Delta Consultants, Inc. is pleased to submit this Initial Site Assessment Addendum report for the West Valley Connector Project. This addendum covers the potential Operations & Maintenance Facility Sites for the West Valley Connector Project. The purpose of the report is to assist the project proponents in understanding whether significant environmental liabilities regarding hazardous waste or Recognized Environmental Conditions exist on the Project. This report discusses our purpose and scope of work, execution of work, conclusions, and recommendations for the Project. Group Delta Consultants, Inc. has interpreted the American Society for Testing and Materials E1527-13 as the guidance document for this Initial Site Assessment and used its provisions to the extent deemed appropriate for this report.

We appreciate your selection of Group Delta Consultants, Inc. for this project and look forward to assisting you further on this and other projects. If you have any questions, please do not hesitate to contact us.

Sincerely,

GROUP DELTA CONSULTANTS, INC.

Glenn Burks, Ph.D., P.E.
Director of Environmental Services

Elaine Horng
Staff Engineer

EXECUTIVE SUMMARY

The San Bernardino County Transportation Authority (SBCTA) and Omnitrans, proposed operator of the project, in cooperation with the cities of Pomona, Montclair, Ontario, Rancho Cucamonga, and Fontana, proposes construction of the West Valley Connector Project, a 35-mile-long Bus Rapid Transit (BRT) project that will decrease travel times and improve the existing public transit system within the corridor. Three sites are being considered for the placement of the new Operations and Maintenance (O&M) Facility. All are owned by the City of Ontario and are located in the industrial zoned area, slightly more than a mile from the proposed BRT corridor alignment on Holt Boulevard:

Site 1: 1516 S. Cucamonga Avenue, Ontario (APN 1050-131-03-0000 and APN 1050-131-02-0000). If selected, the O&M facility will be built at the bottom portion of the parcel encompassing an area of approximately 6.0 acres.

Site 2: 1440 S. Cucamonga Avenue, Ontario (APN 1050-141-07-0000). If selected, the O&M facility will utilize the entire parcel encompassing an area of approximately 4.8 acres.

Site 3: 1333 S. Bon View Avenue, Ontario (APN 1049-421-01-0000 and APN 1049-421-02-0000). If selected, the O&M facility will be built at the bottom portion of the parcel encompassing an area of approximately 6.6 acres.

The purpose of the Initial Site Assessment (ISA) was to review, evaluate, and document present and past land uses and practices, and visually examine Site conditions in order to identify Recognized Environmental Conditions (RECs). A REC is defined as the presence or likely presence of any hazardous substances or petroleum hydrocarbons on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum hydrocarbons into structures or into the ground, groundwater, or surface water of the subject property. A historical recognized environmental condition (HREC) is defined as a past release of any hazardous substances or petroleum products that has occurred in connection with a property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls. The REC term does not include *de minimis* conditions that generally do not present a threat to human health or the environment, and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Environmental Areas of Concern (AOC) that do not represent RECs, but may require further attention during construction or additional investigation, are also identified in this ISA.

It should be noted that this ISA Addendum includes only the assessment of the potential O&M facility Sites.

Group Delta Consultants, Inc. (Group Delta) has interpreted the American Society for Testing and Materials (ASTM) E1527-13 as the guidance document for this ISA and used its provisions to the extent deemed appropriate for this report.

Findings and Conclusions - The focus of the ISA was the potential O&M facilities Sites and adjacent properties.

The ISA identified the following one (1) REC and one (1) AOC associated with Sites:

AOC – Site 1: 1516 S. Cucamonga Ave. (APN 1050-131-03-0000 and APN 1050-131-02-0000)

Site 1 appears to have undergone limited development since it was used for agricultural purposes and the likelihood of removal or redistribution and dilution of any soil possibly contaminated by agricultural use is considered low. Due to the historical agricultural usage of Site 1, the potential for residual pesticides including organochlorine pesticides (OCPs) and arsenic is considered an AOC.

REC - Site 3: 1333 S. Bon View Ave. (APN 1049-421-01 and north-adjacent APN 1049-421-02)

Various industrial activities were conducted on Site 3 from beginning as early as 1961. These activities included repair of motor homes, painting, plating, casting, machining, and wood staining. Between 1988 and 2008, several site investigations were performed on the Site which currently has oversight from the Department of Toxic Substances Control (DTSC).

Site 3 has a land use restriction as of December 2008, prohibiting day care centers, elder care centers, hospital use, excavation of contaminated soils without agency review and approval, public or private schools for persons under 21, and residential use.

Site 3 was investigated and certified with a land use covenant due to contamination left in place with Land Use Control (LUC) inspections conducted annually to ensure that the contamination under the cap is not disturbed.

Chemicals of potential concern for Site 3 are as follows: arsenic, chromium, hexavalent chromium (Cr+6), and nickel in soil and air as particulates and chloroform, dibromochloromethane, tetrachloroethylene (PCE), and trichloroethylene (TCE) in air as vapor.

City of Ontario and DTSC agreed to identify the following areas in the LUC and that DTSC would be notified when excavation activities are planned for these areas:

- Three truck wells
- Former small paint line immediately behind the main office building
- Former foundry area
- Former 1,000-gallon gasoline underground storage tank (UST) (previously closed by San Bernardino County DEH)

- Former 12,000-gallon diesel UST (previously closed by San Bernardino DEH)
- Former welding shop
- Former Building 8, including the former plating shop
- Former catch basin in Former Building 6

During site reconnaissance, it was noted that Former Building 6 is part of the southern portion of Warehouse 3 and Former Building 8 is part of the northern portion of Warehouse 3.

These areas are identified in Appendix E Online Database File Review Diagram from the 2017 Annual Inspection Report (American Integrated Services, Inc, February 2018).

Proposed construction on Site 3 will require the development of a final Soil Management Plan (SMP) for DTSC approval. The SMP will be implemented during construction under the oversight of DTSC.

No RECs were identified over the course of this ISA for adjacent properties to the three Sites.

Recommendations – Group Delta provides the following recommendations associated with Site 1 located at 1516 S. Cucamonga Ave., Ontario, CA:

- Due to the historical agricultural usage of Site 1, a limited soil screening is recommended to assess for the presence of residual pesticides including arsenic and OCPs in Site 1's soil.

Group Delta provides the following recommendations associated with Site 3 at 1333 S Bon View Ave, Ontario, CA:

- DTSC must be engaged and notified of the proposed project. Any changes to the responsible party (RP), cleanup liability, and/or the Voluntary Cleanup Agreement for the DTSC case will need to be determined during the property acquisition process.
- A Final Soil Management Plan must be developed for the Site. The plan must be reviewed and approved by the DTSC. A Soil Management Plan Template has been approved by the DTSC which may facilitate this process.
- DTSC will provide oversight during earthwork activities for the LUC areas on the Site. The process will likely involve reporting to the DTSC on the status of construction and remediation.
- Following remediation, the status of the case and land use restrictions should be revisited with the DTSC.

1.0 INTRODUCTION

This Initial Site Assessment (ISA) Report Addendum assesses three potential sites for the Operations and Maintenance (O&M) facility for the West Valley Connector (WVC) Project (the WVC Project or proposed project) for the presence or likely presence of any hazardous substances or petroleum hydrocarbons on the properties under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum hydrocarbons into structures or into the ground, groundwater, or surface water of the subject properties, otherwise known as a recognized environmental condition (REC).

The San Bernardino County Transportation Authority (SBCTA), in cooperation with the cities of Pomona, Montclair, Ontario, Rancho Cucamonga, and Fontana, proposes construction of the West Valley Connector Project, a 35-mile-long Bus Rapid Transit (BRT) project that will decrease travel times and improve the existing public transit system within the corridor.

In January 2017, SBCTA entered into a cooperative agreement with Omnitrans designating SBCTA as the lead agency for the proposed WVC Project. SBCTA intends to construct the WVC, which will then be operated by Omnitrans. SBCTA has the authority to allocate Federal Transit Administration (FTA) funds; however, it does not have the ability to receive funds directly from the FTA. Omnitrans is the direct FTA grantee for the San Bernardino Valley. As a result, SBCTA and Omnitrans have developed a successful direct recipient/sub-recipient working relationship to deliver projects with FTA funds. The current relationship allows the delivery of FTA-funded projects that meet FTA requirements without duplicating staff, assuring the best use of limited public funds available. Omnitrans and SBCTA executed Memorandum of Understanding (MOU) 15-1001289 in October 2015, setting forth the roles and responsibilities of the recipient/sub-recipient relationship.

The project is subject to state and federal environmental review requirements because it involves the use of federal funds from the FTA. An Environmental Impact Report (EIR)/Environmental Assessment (EA) has been prepared for the proposed project in compliance with the California Environmental Quality Act (CEQA) and the National Environmental Policy Act (NEPA). SBCTA is the CEQA lead agency, and FTA is the NEPA lead agency. This ISA Technical Study has been prepared as part of the technical analysis required to support the EIR/EA.

1.1 Project Location and Setting

The proposed project is located primarily along Holt Avenue/ Boulevard and Foothill Boulevard that would connect the cities of Pomona, Montclair, Ontario, Rancho Cucamonga, and Fontana in the counties of Los Angeles and San Bernardino, California. The project limits extend from Main Street in the city of Pomona on the west side to Sierra Avenue in the city of Fontana on the east side and Church Street in the city of Rancho Cucamonga on the north side to Ontario International Airport on the south side (see Figures 1-1 and 1-2). The proposed project area is

primarily urban, and generalized land uses include low-, medium-, and medium-high-density residential, commercial, industrial, open space and recreation, transportation and utilities, agriculture, vacant, public facilities, airport, educational facilities, and offices.

1.2 Purpose and Need

The purpose of the proposed project is to improve corridor mobility and transit efficiency in the western San Bernardino Valley from the city of Pomona, in Los Angeles County, to the city of Fontana, in San Bernardino County, with an enhanced, state-of-the-art BRT system (i.e., the system that includes off-board fare vending, all-door boarding, TSP, optimized operating plans, and stations that consist of a branded shelter/canopy, security cameras, benches, lighting, and variable message signs).

The proposed project would address the growing traffic congestion and travel demands of the nearly one million people that would be added to Los Angeles and San Bernardino County by 2040 per SCAG 2106 RTP/SCS growth forecast. Improved rapid transit along the project corridor would help Omnitrans/SBCTA achieve its long-range goals to cost effectively enhance lifeline mobility and accessibility, improve transit operations, increase ridership, support economic growth and redevelopment, conserve nonrenewable resources, and improve corridor safety.

Recognizing the importance of the WVC transit corridor, SBCTA is proposing a project that is designed to achieve the following objectives:

- Improve transit service by better accommodating high existing bus ridership.
- Improve ridership by providing a viable and competitive transit alternative to the automobile.
- Improve efficiency of transit service delivery while lowering Omnitrans' operating costs per rider.
- Support local and regional planning goals to organize development along transit corridors and around transit stations.

The project purpose and objectives stated above would respond to the following needs:

- Current and future population and employment conditions establish a need for higher-quality transit service.
- Current and future transportation conditions establish a need for an improved transit system.
- Transit-related opportunities exist in the project area.

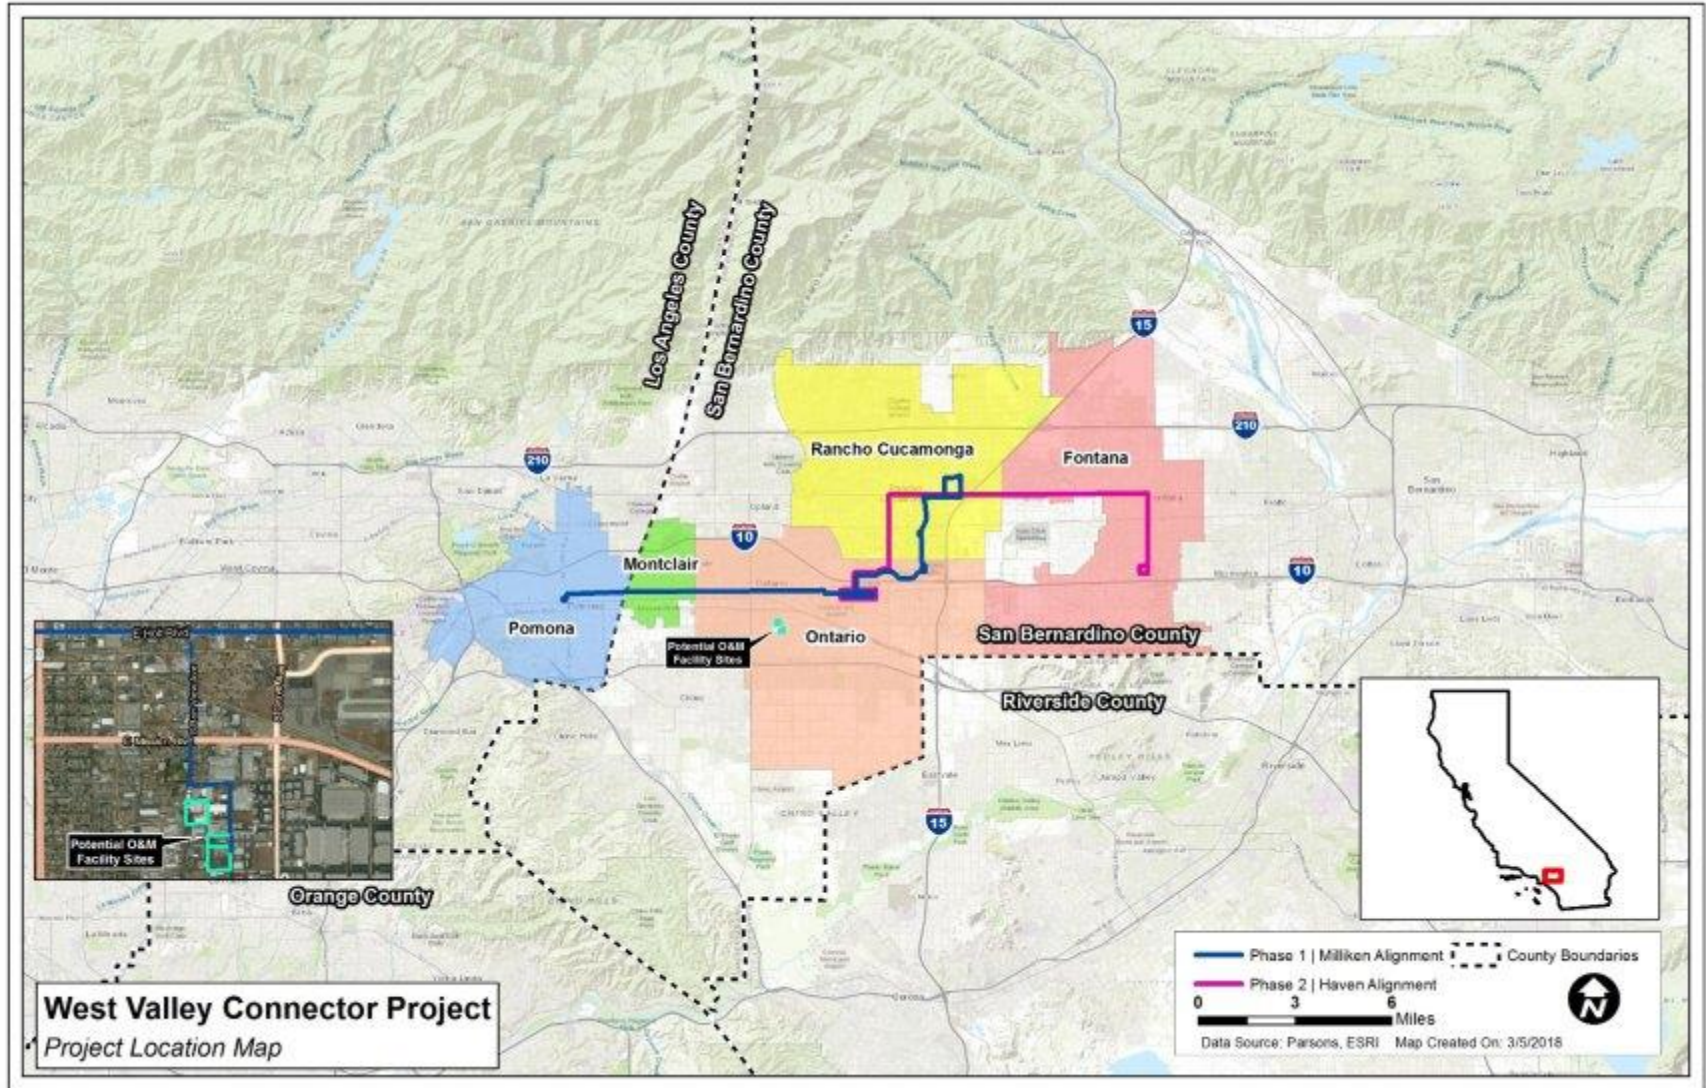

Figure 1-1: Project Location Map

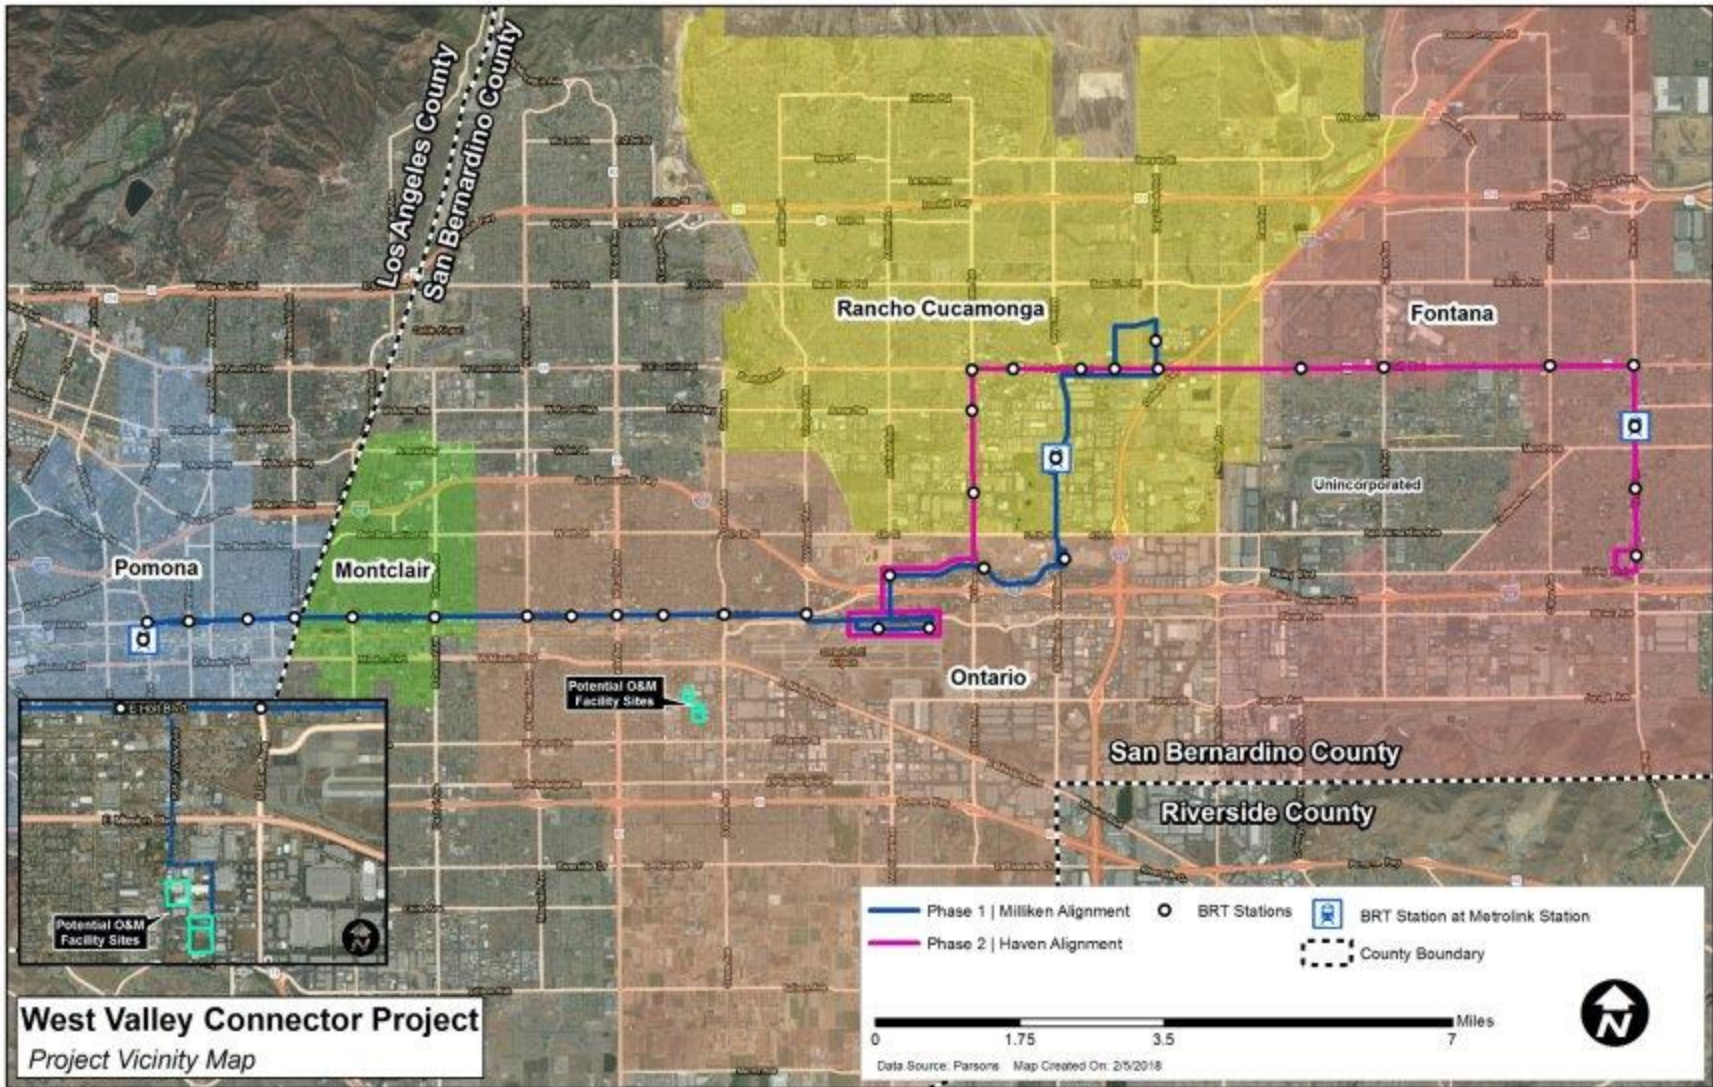

Figure 1-2: Project Vicinity Map

2.0 PROJECT DESCRIPTION

2.1 Proposed Project

The WVC Project is a 35-mile-long BRT corridor project located primarily along Holt Avenue/Boulevard and Foothill Boulevard that would connect the cities of Pomona, Montclair, Ontario, Rancho Cucamonga, and Fontana in the counties of Los Angeles and San Bernardino, California. The project proposes limited stops, providing speed and quality improvements to the public transit system within the corridor. The project includes BRT stations at up to 33 locations/major intersections and associated improvements, premium transit service, TSP and queue jump lanes, dedicated lanes, and integration with other bus routes.

The project alignment consists of two phases. Phase I of the project would construct the “Milliken Alignment,” from the Pomona Regional Transit Center (downtown Pomona Metrolink Station) to Victoria Gardens in Rancho Cucamonga. Phase II of the project would construct the “Haven Alignment,” from Ontario International Airport to Kaiser Permanente Medical Center in Fontana. The Phase I/Milliken Alignment would begin construction in 2020 and is proposed to have 10-minute peak and 15-minute off-peak headways. Phase II is intended to be constructed immediately following completion of Phase I, depending on the availability of funding.

Phase I/Milliken Alignment

Phase I of the project would construct the Milliken Alignment from the western boundary limit in Pomona to Victoria Gardens in Rancho Cucamonga. In Pomona, the alignment starts from the Pomona Regional Transit Center station, travels along Holt Avenue and into Montclair.

In Montclair, the alignment runs on Holt Boulevard between Mills Avenue and Benson Avenue and into Ontario.

In Ontario, the alignment continues on Holt Boulevard, starting from Benson Avenue, and then continues to Vineyard Avenue and into Ontario International Airport (loop through Terminal Way). From the airport, it heads north on Archibald Avenue to Inland Empire Boulevard and turns right to go east on Inland Empire Boulevard.

On Inland Empire Boulevard, the alignment goes straight into Ontario Mills (loop through Mills Circle) and then heads north on Milliken Avenue into Rancho Cucamonga.

In Rancho Cucamonga, the alignment makes a loop into the Rancho Cucamonga Metrolink Station off Milliken Avenue and then continues up Milliken Avenue and turns east onto Foothill Boulevard.

The alignment continues east on Foothill Boulevard, turns north onto Day Creek Boulevard, and then terminates with a layover at Victoria Gardens at Main Street. From Victoria Gardens, the bus

line begins a return route by continuing north on Day Creek Boulevard, turns west onto Church Street, turns south onto Rochester Avenue, and then turns west back onto Foothill Boulevard.

Phase II/Haven Alignment

Phase II of the project would construct the Haven Alignment, from Ontario International Airport to Kaiser Permanente Medical Center in Fontana. In Ontario, the alignment makes a loop through Terminal Way at Ontario International Airport. From the airport, it heads north on Archibald Avenue to Inland Empire Boulevard and turns right to go east on Inland Empire Boulevard.

From Inland Empire Boulevard, the alignment turns left to go north up Haven Avenue into Rancho Cucamonga, then turns right and travels east onto Foothill Boulevard and into Fontana.

In Fontana, the alignment continues east on Foothill Boulevard until turning south onto Sierra Avenue. The alignment follows Sierra Avenue, including a stop at the Fontana Metrolink Station, and then continues until turning west onto Marygold Avenue, where the bus line would begin a turn-around movement by heading south onto Juniper Avenue, east onto Valley Boulevard, and north back onto Sierra Avenue to Kaiser Permanente Medical Center before heading northward for the return trip.

2.2 Project Alternatives

Many alternatives were considered during the project development phase of the project. A No Build Alternative and two build alternatives (Alternatives A and B) are being analyzed in the EIR/EA.

2.2.1 No Build Alternative

The No Build Alternative proposes no improvements to the existing local bus services. Under the No Build Alternative, the existing local bus service on Routes 61 and 66 would maintain current service of 15-minute headways (total of four buses per hour in each direction).

2.2.2 Build Alternatives

Figure 2-1 presents the map of both build alternatives. All design features of both build alternatives are the same, as described in more details in Section 2.3, with the exception of the following:

Alternative A – Full BRT with no Dedicated Bus-only Lanes

Alternative A would include the 35-mile-long BRT corridor, which is comprised of the Phase I/Milliken Alignment, Phase II/ Haven Alignment, and 60 side-running stations at up to 33 locations/major intersections. The BRT buses will operate entirely in the mixed-flow lanes. The right-of-way (ROW) limits and travel lane width vary in other segments of the corridor. Implementation of Build Alternative A will not require permanent or temporary ROW acquisition.

Alternative B – Full BRT with 3.5 miles of Dedicated Bus-only Lanes in Ontario

Alternative B would include the full 35-mile-long BRT corridor, which is comprised of the Phase I/Milliken Alignment, Phase II/ Haven Alignment, 3.5 miles of dedicated bus-only lanes, and five center-running stations and 50 side-running stations at up to 33 locations/major intersections. The dedicated lanes segment would include two mixed-flow lanes and one transit lane in each direction and five center-running stations. To accommodate the dedicated lanes, roadway widening and additional utilities, such as electrical and fiber-optic lines, would require permanent and temporary ROW acquisition. In addition, some areas of the project corridor would require reconfiguration, relocation, or extension of adjacent driveways, curbs, medians, sidewalks, parking lots, and local bus stops.

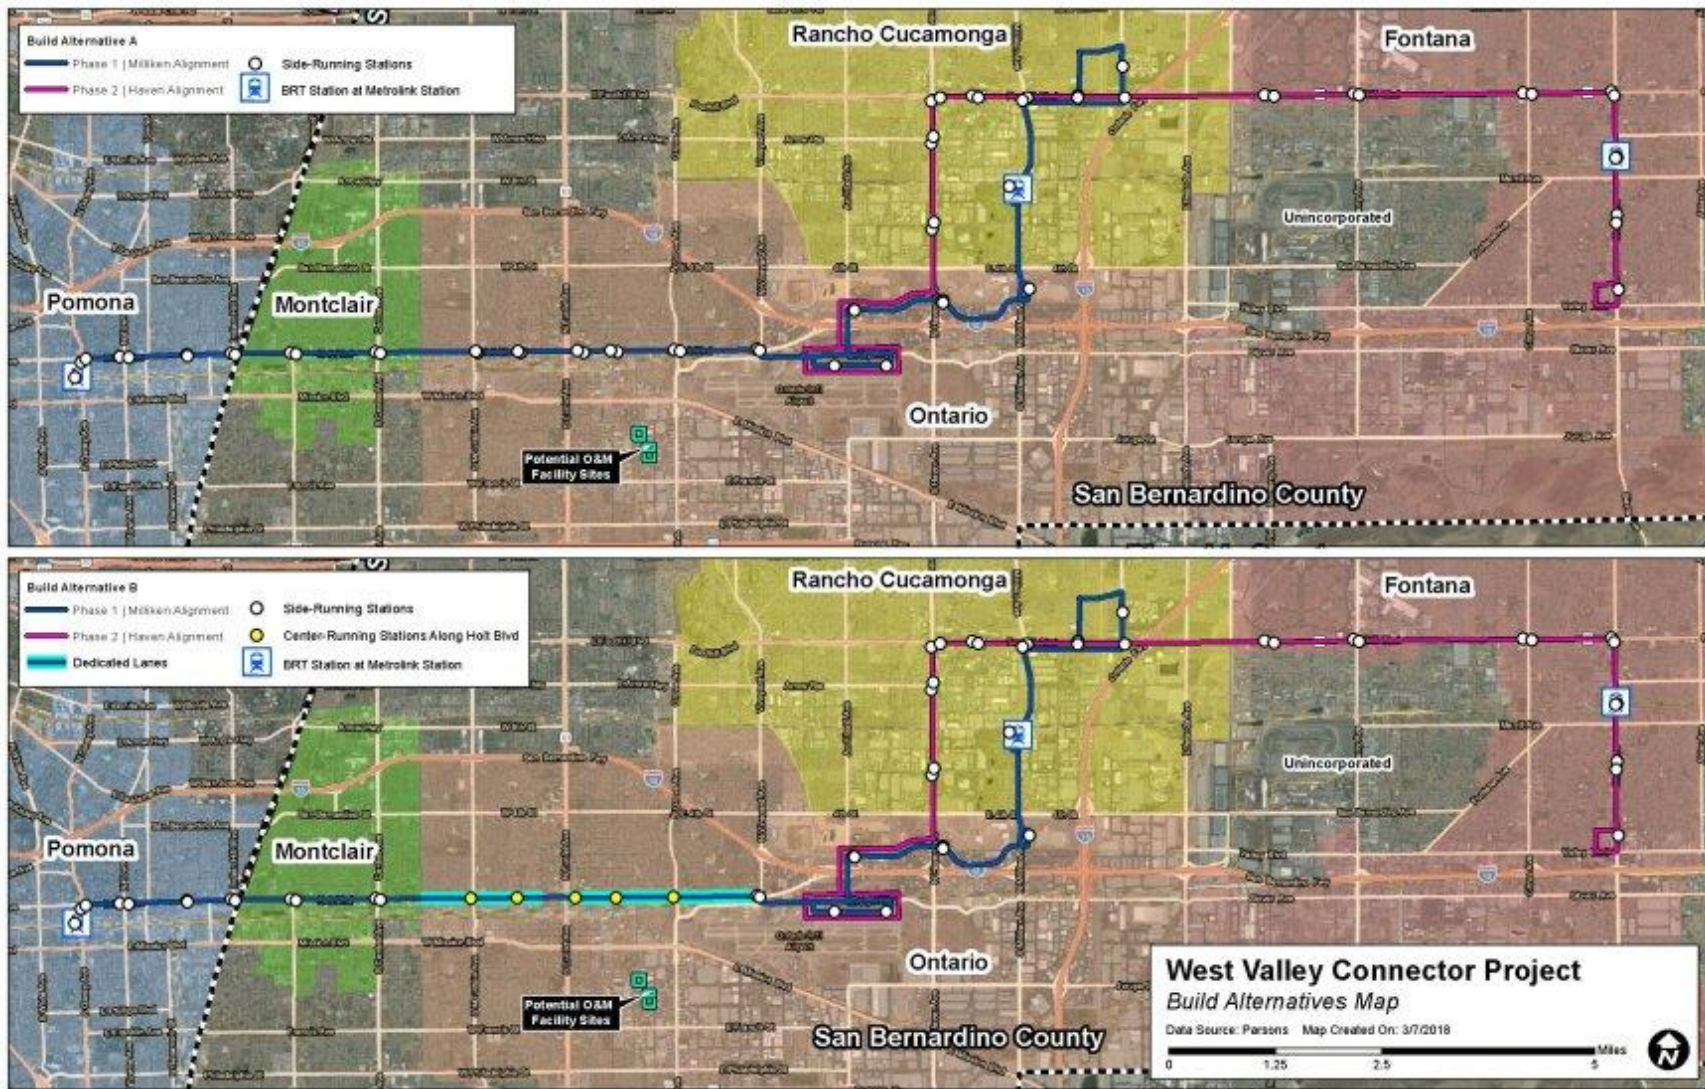

Figure 2-1: Build Alternatives Map

2.3 Design Features of Build Alternatives

2.3.1 Bus Rapid Transit Stations

BRT stations at 33 locations/major intersections and associated improvements are proposed to be located approximately 0.5 to 1 mile apart to facilitate higher operating speeds by reducing dwell time (see Figure 1-2 and Figure 2-1 for station locations). Table 2-1 lists the BRT stations to be constructed as part of Phase I/Milliken Alignment. Note that under Alternative A, all 21 stations will be side-running stations. Under Alternative B, five center platform stations are proposed as follows:

- Holt Boulevard/Mountain Avenue
- Holt Boulevard/San Antonio Avenue
- Holt Boulevard/Euclid Avenue
- Holt Boulevard/Campus Avenue
- Holt Boulevard/Grove Avenue

As part of Phase II/Haven Alignment, an additional 12 side-running stations will be constructed for both build alternatives as listed in Table 2.

Table 2-1: Stations Along Phase I/Milliken Alignment

City	Stations

Source: 30% Preliminary Engineering Design, Parsons 2017

Side-Running Stations

Side-running stations would typically be located on the far side of an intersection to facilitate transit priority and to avoid a stopped bus from blocking those turning right from the corridor. Where curb cuts for driveways and other conditions do not provide enough space along the curbside for both the sbX and the local bus on the far side of the intersection, the local buses would be located on the near side of the intersection.

In the side-running condition, stations may include new or improved shelters with passenger amenities, or only an sbX-branded pylon with signature light. Proposed shelters would be approximately 18 feet in length and a width that would fit a 10-foot-wide-minimum sidewalk. Passenger amenities at the side platform stations would include benches, bicycle racks, trash receptacles, variable message signs, security cameras, and lighting integrated with the shelter. There would be no fare collection equipment on the sidewalks or shelters when the available ROW is less than 10 feet, and the passengers may pay the fee on the bus. Side-running stations would also include various amenities.

For all stations in Rancho Cucamonga, only an sbX-branded pylon with signature light is proposed. Should shelters be implemented in the future, coordination between the City of Rancho Cucamonga and SBCTA would be required to environmentally clear the shelters at a later time.

Center Platform Stations

As indicated in Section 2.3.1, five center platform stations are proposed to be constructed as part of Phase I/Milliken Alignment (in Ontario) under Alternative B.

The center platform stations would be located in the center of the street ROW on a raised platform with an end-block crossing. Access would be provided by crosswalks at intersections and

Americans with Disabilities Act (ADA)-compliant ramps to the station platforms. Center platforms would be placed as close to the intersection as possible while still maintaining left-turn pockets, where required.

In the optimum center platform configuration, the platform would accommodate a canopy with its seating area, passenger amenities, fare equipment, and a ramp to comply with relevant accessibility requirements and provide clearance in front of ticket vending machines. Stations would include amenities that can be assembled and laid out to suit the functionality of the station and fit with the surrounding land uses.

2.3.2 sbX Bus Operations

The proposed project would require 18 buses during the Phase I operation and increase to 27 buses for the Phase I and Phase II operation to serve the designed headways and have sufficient spare vehicles.

Under Alternative A, sbX buses would operate entirely in mixed-flow lanes along the proposed 35 miles of the Phase I and Phase II alignments. For Alternative B, sbX buses will operate in mixed flow lanes similar to Alternative A except where dedicated bus-only lanes (3.5 miles) are proposed along Holt Boulevard, between Benson Avenue and Vine Avenue and between Euclid Avenue and Vineyard Avenue, in Ontario.

Roadway sections where the sbX would operate in mixed-flow lanes would generally be kept as existing conditions, although some modifications, such as relocated curb and gutter, may be necessary near the stations to provide sufficient room for bus stopping and loading. Reconstruction of curb and gutters would only be required for the segment where dedicated bus-only lanes are proposed. Vehicular lanes where the sbX buses would operate in dedicated bus-only lanes would feature concrete roadways, painted or striped to visually separate the exclusive lanes from mixed-flow lanes. Transition areas from mixed-flow to exclusive lanes would be provided at each end of an exclusive lane location. Such transitions would be clearly marked to separate bus movements from other vehicular traffic. Reinforced concrete bus pad in the pavement would be placed at all station locations for the sbX buses.

sbX buses would operate from 6:00 a.m. to 8:00 p.m. with peak headways for 4 hours and off-peak headways for 10 hours per day for a total span of service of 14 hours per day, Monday through Friday. From the Pomona Metrolink Transit Center station to Inland Empire Boulevard, the sbX buses would operate on 10-minute peak headways and 15-minute off-peak headways. Additional service hours, including weekend service, may be added if additional operating funds become available in the future.

2.3.3 Operations and Maintenance

Fleet Composition

The proposed project's fleet would be comprised of 60-foot-long articulated compressed natural gas (CNG) propulsion buses. sbX buses would hold approximately 96 passengers at maximum capacity with up to 8 bicycles on board. Today, the average local bus operating speeds are only 12 to 15 miles per hour (mph), and they are getting slower as corridor congestion worsens. In calculating run times, it was assumed that the average dwell time at stations would be 30 seconds (peak service), and average overall speed would be 20 mph. The average speed for sbX buses would be 18 mph.

Maintenance Requirements and Associated Facilities

Omnitrans operates and maintains its existing bus fleets from two major Operations and Maintenance (O&M) facilities: East Valley Vehicle Maintenance Facility (EVVMF), located at 1700 W. 5th Street in the City of San Bernardino and West Valley Vehicle Maintenance Facility (WVVMF), located at 4748 E. Arrow Highway in the City of Montclair. EVVMF is a Level III facility capable of full maintenance of buses and WVVMF is a Level II facility suitable for light maintenance. Neither facility has sufficient capacity to accommodate the additional maintenance and storage requirements of the bus fleet associated with the proposed WVC Project.

The purpose of the new O&M facility is to provide operations and maintenance support to the existing full-service EVVMF. The new facility would be designed and constructed to provide Level I service maintenance with a capacity to be upgraded to provide Level II service maintenance. Heavy repair functions and administrative functions would remain exclusively with the EVVMF in San Bernardino.

Facility Components

Conceptually, the new O&M facility would be built on an approximate 5-acre site. The Level I facility would include a parking area, bus washing area, fueling area, and a personnel and storage building. As needs arise, the facility could be upgraded to provide Level II service, which will include the addition of a maintenance shop and a larger administrative building. Landscaping and irrigation would be provided to enhance the comfort of employees and the appearance of the facility, and to help screen maintenance facilities and operations from offsite viewpoints within the community. Figure 2-2 shows the conceptual site plan of the Level II facility.

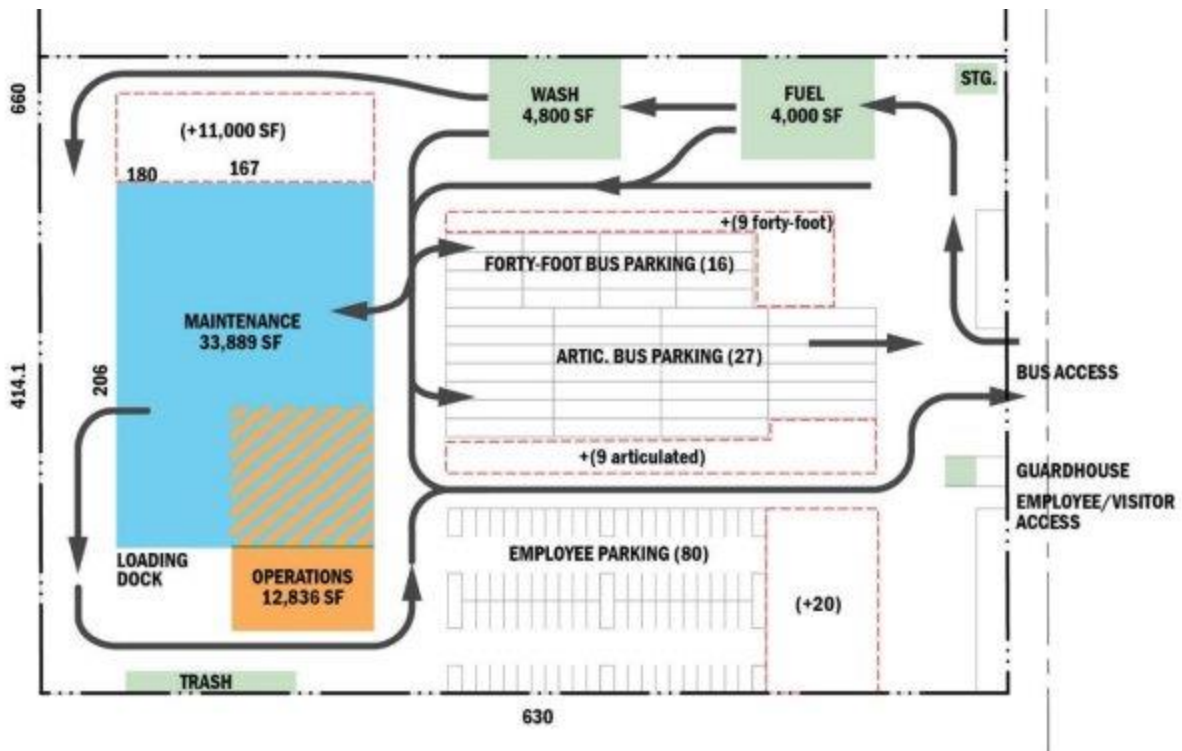

Figure 2-2: O&M Facility Conceptual Site Plan

Depending on the service level to be performed, approximately 50-100 staff would be using this facility including bus operators and O&M staff.

Potential Sites

Three sites are being considered for the placement of the new O&M facility (see Figure 2-3). All are owned by the City of Ontario and are located in the industrial zoned area, slightly more than a mile from the proposed BRT corridor alignment on Holt Boulevard:

- Site 1: 1516 S. Cucamonga Avenue, Ontario (APN 1050-131-03-0000 and APN 1050-131-02-0000). The current use of this property is public works storage yard. If selected, the O&M facility will be built at the bottom portion of the parcel encompassing an area of approximately 6.0 acres.
- Site 2: 1440 S. Cucamonga Avenue, Ontario (APN 1050-141-07-0000). The current use of this property is compressed natural gas fueling station. If selected, the O&M facility will utilize the entire parcel encompassing an area of approximately 4.8 acres.
- Site 3: 1333 S. Bon View Avenue, Ontario (APN 1049-421-01-0000 and APN 1049-421-02-0000). The current use of this property is municipal utility and customer service center. If selected, the O&M facility will be built at the bottom portion of the parcel encompassing an area of approximately 6.6 acres.

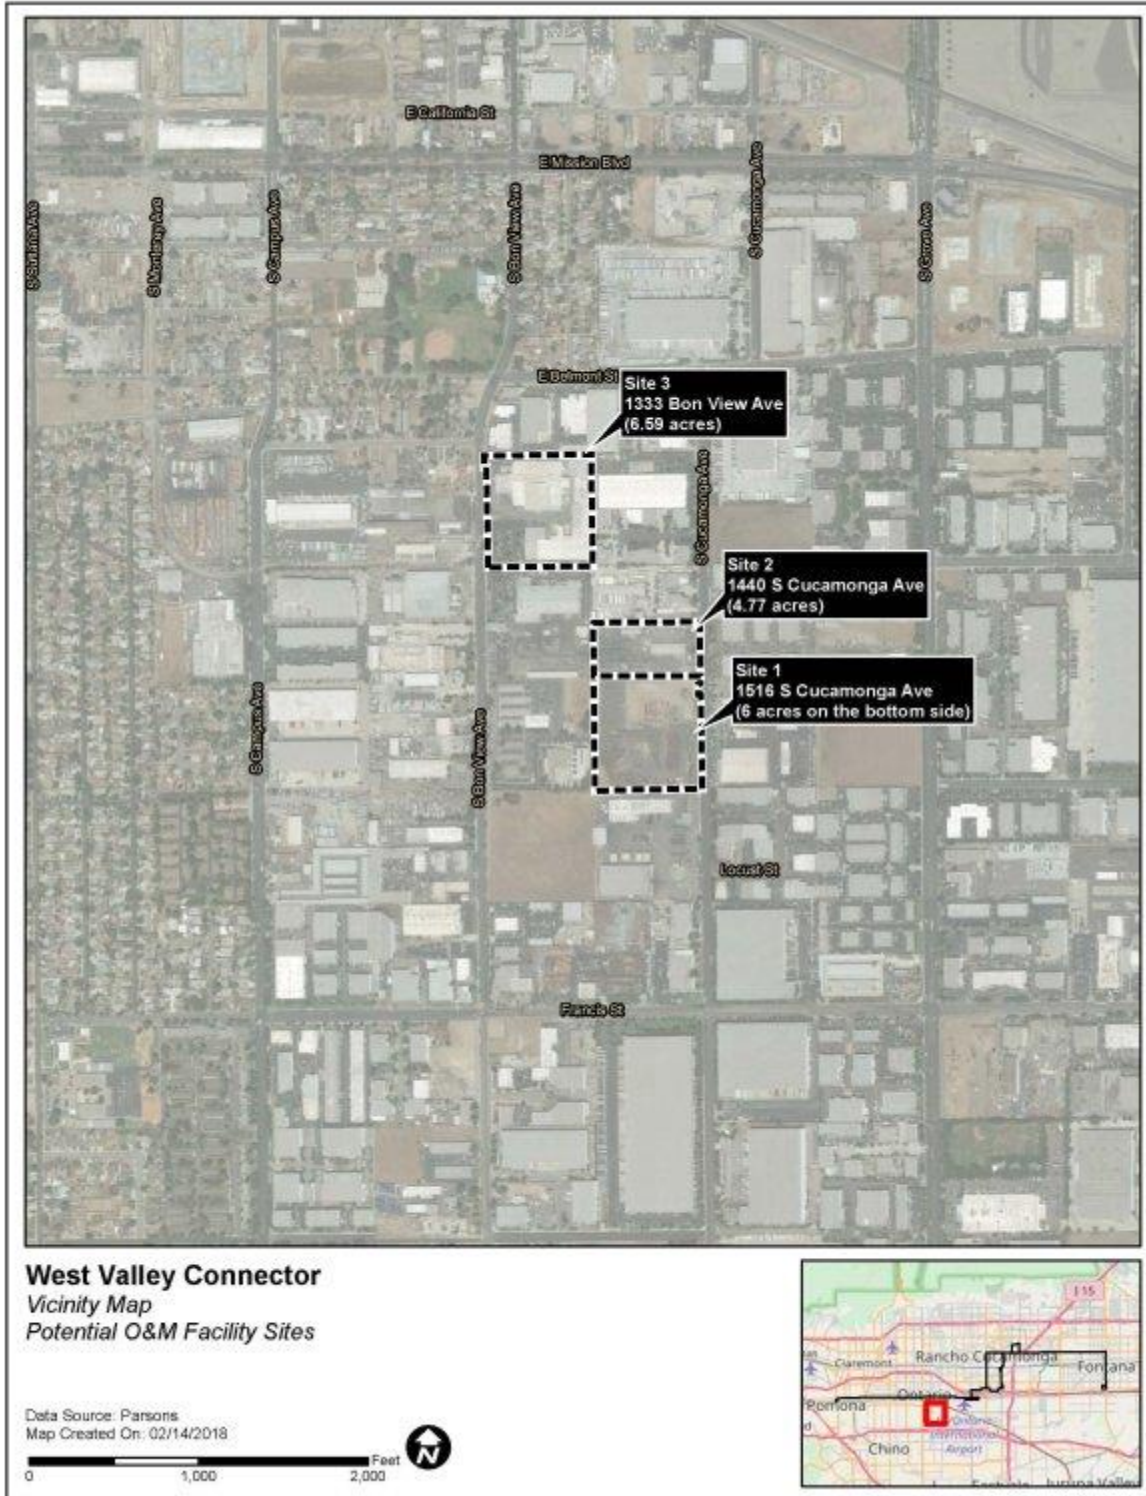

Figure 2-3: Potential Operations and Maintenance Facility Sites

Buses coming to and from the new facility could use nearby access roads that directly connect to the BRT corridor such as South Campus Avenue, South Bon View Avenue, and South Grove Avenue.

The O&M facility will be constructed during the same period as the Phase I/Milliken Alignment and would be open for operation at the same time as the Phase I alignment. Construction duration is estimated at 12 months.

2.4 Implementation Schedule

Implementation of the proposed project is planned over the next 5 years and would entail many activities, including:

- Completion of the environmental compliance phase (December 2018)
- Completion of Preliminary Engineering (December 2018)
- Completion of Final Design (April 2020)
- Completion of Construction of Phase I/Milliken Alignment and testing (December 2022)
- Completion of O&M facility (December 2022)
- System operation (begin revenue operation in January 2023)
- Construction of Phase 2/Haven Alignment is schedule to occur after the completion of Phase I/Milliken Alignment pending funding availability.

3.0 SCOPE OF WORK

The purpose of the ISA was to review, evaluate, and document present and past land uses and practices, and visually examine Site conditions in order to identify Recognized Environmental Conditions (RECs). A REC is defined as the presence or likely presence of any hazardous substances or petroleum hydrocarbons on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum hydrocarbons into structures or into the ground, groundwater, or surface water of the subject property. A historical recognized environmental condition (HREC) is defined as a past release of any hazardous substances or petroleum products that has occurred in connection with a property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls. The REC term does not include *de minimis* conditions that generally do not present a threat to human health or the environment, and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Environmental Areas of Concern (AOCs) that do not represent RECs, but may require further attention during construction or additional investigation, are also identified in this ISA. It should be noted that this ISA Addendum includes only the assessment of the potential O&M facility Sites.

3.1 Detailed Scope of Work

Group Delta Consultants, Inc. (Group Delta) has interpreted the American Society for Testing and Materials (ASTM) E1527-13 as the guidance document for this ISA and used its provisions to the extent deemed appropriate for this report. In general, the scope of work included:

- Review of available information to describe the general geology and hydrogeology at the Site and adjacent areas;
- Review of the files provided by the User (Omnitrans and SBCTA);
- Interview with the User and government officials;
- Search of regulatory records regarding possible hazardous material handling, spills, storage or production at the Site or in its vicinity;
- Review of the online data available from the Department of Toxic Substances Control (DTSC), California State Water Resources Control Board (SWRCB), Division of Oil, Gas, and Geothermal Resources (DOGGR), and Pipeline and Hazardous Materials Safety Administration (PHMSA);
- Request agency records from San Bernardino County Fire Department (SBCFD), San Bernardino County Department of Environmental Health Services (SBCDEHS), and South Coast Air Quality Management District (SCAQMD).
- Review of historic aerial photographs; historic topographic maps; and Sanborn fire maps;
- Reconnaissance of the Site and the immediately surrounding area;
- Develop conclusions and findings, and;
- Prepare a report describing the assessment and presenting the results and findings.

A statement of interpretive limitations is contained below.

3.2 Significant Assumptions

As stated in the previous section, this ISA was conducted in general accordance with ASTM E1527-13 to the extent deemed appropriate. This was done to identify and analyze environmental conditions that constitute existing, past, or potential environmental risks associated with the Site. Performance in accordance with these standards is intended to reduce, but not eliminate, uncertainty with respect to the potential for RECs associated with the Site. This ISA was not prepared to meet landowner liability protection under CERCLA.

3.3 Limitations and Exceptions

This ISA report is intended for the sole use of Parsons Transportation Group (Client), Omnitrans, SBCTA, and the cities of Pomona, Montclair, Ontario, Rancho Cucamonga, and Fontana for the specific project identified. Our services have been performed under mutually agreed-upon terms and conditions. If other parties wish to rely on this report, please have them contact us so that a mutual understanding and agreement of the terms and conditions for our services can be established prior to their use and reliance of this report and the information it contains.

The findings and opinions presented are relative to the dates of our work and should not be relied on to represent conditions at substantially later dates. The opinions included herein are based on information obtained during the study and our experience. If additional information becomes available, which might impact our environmental findings, we request the opportunity to review the information, reassess the potential conditions, and modify our opinions, if warranted.

Although this assessment has attempted to identify the potential for environmental impacts to the Sites, potential sources of contamination may have escaped detection due to: (1) the limited scope of this assessment, (2) the inaccuracy of public records, and /or (3) the presence of undetected or unreported environmental incidents.

It was not within the scope of this assessment to address issues not included in ASTM 1527-13 (such as radon, lead in drinking water, naturally-occurring hazardous materials). Further, it was not the purpose of this study to determine the degree or extent of contamination, if any, at the Sites.

Our professional services have been performed using that degree of care and skill ordinarily exercised, under similar conditions, by reputable environmental consultants practicing in this or similar localities. No other warranty, expressed or implied, is made regarding the professional information in this report.

3.4 User Reliance

This assessment was performed at the request of the Client, utilizing methods and procedures consistent with good commercial or customary practices designed to conform to acceptable industry standards. The assessment and conclusions presented in this report represent the best professional judgment of the Environmental Professional based on the conditions that existed during the assessment and the information and data available to us during the course of this assignment.

Factual information regarding operations and conditions provided by the Client, owner, or their representative has been assumed to be correct and complete.

The report may be distributed and relied upon by the Client, its successors and assigns. Reliance on the information and conclusions presented in this report by any other party or parties is not authorized without the written consent of Group Delta.

4.0 SITE DESCRIPTION

4.1 Location and Legal Description of the Site

Three sites are being considered for the placement of the new O&M facility (see Figure 2-3). All are owned by the City of Ontario and are located in an industrial zoned area, slightly more than a mile from the proposed BRT corridor alignment on Holt Boulevard:

- Site 1: 1516 S. Cucamonga Avenue, Ontario (APN 1050-131-03-0000 and APN 1050-131-02-0000).
- Site 2: 1440 S. Cucamonga Avenue, Ontario (APN 1050-141-07-0000).
- Site 3: 1333 S. Bon View Avenue, Ontario (APN 1049-421-01-0000 and APN 1049-421-02-0000).

For purposes of this ISA addendum, the Site encompasses the target properties above and identified on Figure 2-3.

4.2 Site and Vicinity General Characteristics

The Sites are located within an urban setting amongst primarily industrial and commercial development.

4.2.1 Current Use of the Site and Adjacent Properties

Each of the three sites is owned and operated by the City of Ontario. A summary of the three sites is provided below:

- Site 1: The current use of this property is as a public works storage yard. If selected, the O&M facility will be built at the southern portion of the parcel encompassing an area of approximately 6.0 acres.
- Site 2: The current use of this property is compressed natural gas fueling station. If selected, the O&M facility will utilize the entire parcel encompassing an area of approximately 4.8 acres.
- Site 3: The current use of this property is municipal utility and customer service center. If selected, the O&M facility will be built at the bottom portion of the parcel encompassing an area of approximately 6.6 acres.

Land uses adjacent to the Sites include commercial and industrial facilities. Residential development is located northwest of Site 3.

4.3 Site Geology and Hydrology

A description of the geologic and hydrologic characteristics of the Sites are provided below.

4.3.1 Geology

The Sites are located within the Transverse Ranges Geomorphic Province of California. This province is typically characterized by an east-west trending series of mountains and basins stretching across the northern portion of Southern California from Malibu to the Mojave Desert.

Based upon available published geologic maps, the surface deposits in the area appear to consist of Quaternary alluvial fan deposits and young eolian and alluvial fan deposits (Holocene and late Pleistocene) originating from the San Gabriel to the north and San Bernardino Mountains to the east. Based upon the published mapping for the area, these young eolian and alluvial fan deposits are generally composed of unconsolidated cobbles, gravel, and sand (California Department of Conservation, 2012).

4.3.2 Hydrology

The Sites are situated within the Chino Subbasin of the Upper Santa Ana Valley Hydrologic Basin.

The Chino Subbasin covers approximately 405 square miles and lies largely in the southwestern corner of San Bernardino County, though a small part of Los Angeles County (Pomona area) and part of western Riverside County are included. The Chino Subbasin is bounded on the east by the Rialto-Colton fault; on the southeast by contact with impermeable rocks forming the Jurupa Mountains and low divides connecting exposures. On the south the subbasin is bounded by contact with impermeable rocks of the Puente Hills and Chino fault; on the northwest by the San Jose fault; and on the north by impermeable rocks of the San Gabriel Mountains and by the Cucamonga fault. San Antonio Creek and Cucamonga Creek drain the surface of the subbasin southward to join the Santa Ana River.

According to the Chino Basin Watermaster (CBWM), groundwater is encountered at depths in excess of 250 feet (ft) below ground surface (bgs) in the vicinity of the Site and flows to the southwest. Recently reported groundwater depths to the west and south of the Site are approximately 260 to 320 ft bgs, on average (CBWM, 2009).

5.0 USER PROVIDED INFORMATION

5.1 Title Records

Title records for the acquisition parcels have not yet been obtained at the time of preparation of this ISA.

5.2 Environmental Liens or Activity and Other Use Limitations

The User is not aware of any environmental liens, Activity Use Limitations (AULs), or any pending past or threatened litigation related to hazardous substances or petroleum products associated with the project Site.

Documentation of environmental liens and/or AULs for the acquisition parcels was not identified at the time of preparation of this ISA.

5.3 Specialized Knowledge and Commonly Known or Reasonably Ascertainable Information

The ASTM Standard suggests the ISA User provide any specialized knowledge and common or reasonably ascertainable information indicative of RECs pertaining to the Site to the ISA preparer. The User did not provide any information relating to specialized knowledge of environmental liens, activity and land use limitations, obvious indicators of contamination, or commonly known or reasonably ascertainable information that would help Group Delta identify conditions indicative of releases or threatened releases at the subject Site.

5.4 Valuation reduction for environmental issues

Group Delta has no information regarding the purchase price of the acquisitions associated with the project, or comparable properties. The User has not indicated to Group Delta that there is any conclusion pertaining to a lower purchase price because of known or suspected contamination associated with project acquisitions.

5.5 User Provided Documents

The User did not provide any documents to Group Delta for review other than a project description.

6.0 RECORDS REVIEW

6.1 Standard Environmental Records Sources for the Site and Vicinity

Group Delta conducted a review of reasonably ascertainable environmental regulatory agency databases to identify known or suspected environmental concerns or RECs that may be associated with the Site. A search of readily available environmental records was obtained from Environmental Data Resources, Inc. (EDR) of Milford, Connecticut (Appendix C). The purpose of the regulatory database report review was to evaluate to the extent possible whether activities, processes, operations or actions on the project adjoining properties, and nearby locations have the potential to adversely impact the environmental condition of the project are suspected sources of environmental concern, or present RECs for the project. The regulatory database report provides information regarding current operations and prior regulatory listings for the Site and previous owners and/or operators on the project. The presence or absence of information about the project does not necessarily mean that there are or are not environmental issues associated with the Site.

The regulatory database report includes a list of government databases searched, a statistical profile listing the number of properties within ASTM Standard Practice specified search radii, selected detailed information from environmental regulatory agency databases, and a map illustrating the identified properties, sites, or facilities of interest.

Table 6-1 includes a list of standard federal, state, and tribal environmental database record sources that were reviewed for the proposed project. Table 6-1 includes the database name and associated high hazardous risk or low hazardous risk attribution, where appropriate. It should be noted that only databases that were identified for the project were designated with a risk attribution. Risk attribution was designated solely upon whether or not a database reflects an unauthorized release or environmental cleanup. Databases that reflect an unauthorized release or environmental cleanup are considered high hazardous risk. All other databases are considered low hazardous risk. For a detailed description of databases included in Table 6-1, refer to the EDR regulatory database report, provided in Appendix C.

Properties, sites, operations, and/or facilities identified in the regulatory database report were screened using site-specific criteria that took into consideration the nature of the database listing; the physical environment of the project vicinity; and distance and position of the listed properties, sites, operations, and/or facilities relative to the project. After applying site-specific screening criteria; the properties, sites, operations, and/or facilities that, in the judgment of the environmental professional, pose a potential environmental concern to the Site were further reviewed and the potential adverse impacts to the Site are discussed in this section of the report.

The regulatory database report provides a mechanism to evaluate a relatively large number of environmental regulatory agency databases and eliminate many properties, sites, operations, and/or facilities that have a low potential of adversely impacting the project. However, it should be noted that the information included in the regulatory database report is not necessarily all-inclusive and environmental regulatory agency files may have been purged by public officials prior to release to the public. In addition, mapping errors may not reflect actual distances and directions between the project and the properties, sites, operations, and/or facilities listed in the regulatory database report.

The regulatory database report includes information from federal, state, local, military, and tribal environmental regulatory agency databases.

Each of the listings included in the regulatory database report was reviewed to assess whether these properties would likely pose hazardous waste impacts to the project.

6.1.1 Records Search

The EDR regulatory database report search criteria are based on the ASTM E1527-13 standard, which considers specific approximate minimum search distances for various regulatory bases. The EDR regulatory database report was reviewed to assess whether the three Sites are listed on the EDR regulatory database and are likely to pose environmental impacts to the project.

Table 6-2 provides a summary of parcels identified on high-hazardous risk databases in the EDR regulatory database report. The table includes the operating business name and address associated with the listing; the EDR regulatory database report listing number and associated database(s) on which the listing occurs; and a summary of information pertaining to the listing. For a list of all regulatory databases searched for the proposed project, refer to Table 6-1 – Regulatory Databases Reviewed. For a determination of whether the given listing is a REC or AOC to the project, refer to Section 6.3.2 – Local Department Records.

Table 6-2: EDR DataMap™ Environmental Atlas™ Findings – Potential O&M Facility Sites

Environmental Atlas Findings – Potential O&M Facility Sites
Oakwood Interiors – 1333 S. Bon View Street, Ontario, CA
EDR Listing of Concern: A2, A6
Associated Databases: ENVIROSTOR, VCP, HIST UST, FINDS
Summary of Listing: This database finding is for Site 3. On June 2000, DTSC entered into a Voluntary Cleanup Agreement (VCA) with Bon View Corporation to review and comment on reports of prior investigations and remediation conducted at the Oakwood Interiors Site. All prior activities at the site were conducted without DTSC oversight. The materials were deemed not to be equivalent to a Preliminary Environmental Assessment (PEA) and a PEA was requested.
For more information regarding this listing, refer to Section 6.3.1 – Online Records.

6.1.2 Vicinity Records Search

Multiple properties were listed in the EDR database radius search for the Sites. The radius search area included the project limits and a one-mile radius from the project limits. Numerous properties within this search area were listed on the EDR database and were found not to pose a hazardous waste impact based on the following criteria, or a combination thereof:

- The regulatory case status of the property is identified as completed and closed;
- The type of media affected was identified as soil only;
- The release was in nominal amounts or concentrations as to not present a hazardous waste impact concern to the project;
- The listing was identified on low-hazardous risk databases (i.e., underground storage tank [UST] HAZNET, small quantity generator databases) with no reported spills, cleanups, or violations;

- The property is identified on a low-hazardous risk database as receiving one or more violations, but the nature of violations received was associated with financial, administrative, or record-keeping practices only;
- The distance of the listing to project limits is great enough that it does not present a hazardous waste impact concern to the project, and/or;
- The listing is down-gradient or cross-gradient from the project limits.

Based on these criteria, these listings are not considered an environmental concern to the project and were not evaluated further.

Table 6-3 provides a summary of properties adjacent to the Sites identified on high-hazardous risk databases in the EDR regulatory database report. The table includes the operating business name and address associated with the listing; the EDR regulatory database report listing number and associated database(s) on which the listing occurs; and a summary of information pertaining to the listing. For a list of all regulatory databases searched for the proposed project, refer to Table 6-1 – Regulatory Databases Reviewed. For a determination of whether the given listing is a REC or AOC to the project, refer to Section 6.3.2 – Local Department Records.

Table 6-3 – Environmental Atlas Findings – Adjacent Properties

Environmental Atlas Findings – Adjacent Properties
Merchant’s Delivery Systems – 1406 S. Cucamonga Ave., Ontario, CA
EDR Listing of Concern: C14, D47
Associated Databases: LUST, SWEEPS UST
This listing is north adjacent to Site 2, cross-gradient from Site 2. According to EDR, a diesel leak affecting soil only was discovered on March 1999 and a case was subsequently opened. The case was reportedly closed December 2000.
For more information regarding this listing, refer to Section 6.3.1 – Online Records.
Ontario City – Public Service – 1425 S. Bon View Ave., Ontario, CA
EDR Listing of Concern: H53
Associated Databases: LUST, AST, HIST UST
This listing is west adjacent to Site 2. According to EDR, a leak was discovered affecting soil only in October 1996. Potential contaminants of concern included waste oil, motor, hydraulic and lubricating materials. Verification monitoring was performed in March 1997 and the case was reported to be closed in April 1997.
For more information regarding this listing, refer to refer to Section 6.3.1 – Online Records.

6.2 Historical Use Information on the Site and the Adjoining Properties

Group Delta reviewed available historical information to ascertain the historical uses of the Site and the adjoining properties. Review references primarily included the Sanborn insurance maps, historic aerial photographs, topographic maps, and oil exploration maps.

6.2.1 Sanborn Map Review

Group Delta reviewed a certified Sanborn map report prepared by EDR. After a complete search of the Sanborn Library and fire insurance maps by EDR, fire insurance maps of the Sites were not found. A copy of the Sanborn search findings is provided in Appendix C of this report.

6.2.2 Aerial Photography Review

Aerial photographs of the Sites and surrounding vicinity at discrete intervals from 1938 to 2014 were provided by the EDR Aerial Collection. These historic aerial photographs were reviewed to evaluate previous land uses at the Sites, their vicinity, and observe changes that have occurred over time.

Historical Aerial Maps were provided by EDR for the following years: 1938, 1946, 1948, 1953, 1966, 1975, 1985, 1989, 1990, 1994, 2006, 2010, and 2014.

From as early as 1938 to 1953, Sites 1, 2, and 3, and the surrounding vicinity appeared to be agricultural land.

By 1966, commercial buildings appeared at Site 3 as well as on the west-adjacent property to Site 3. West- and south-adjacent to Site 1, buildings also appeared. The other areas remained unchanged.

By 1975, more buildings appeared on Site 3. More commercial development is evident west-, south-, and east-adjacent to Sites 1 and 2. Sites 1 and 2 appeared to remain unchanged.

By 1985, agricultural activities on Sites 1 and 2 appeared to cease. Site 3 appeared to remain unchanged.

By 1989, Site 2 was developed with commercial buildings and Site 1 appeared to undergo a change in land use but mostly appeared to be undeveloped. No other changes were apparent.

By 1990, commercial buildings appeared north-adjacent to Site 3. No other changes to Sites 1, 2, and 3 were apparent. Sites 1, 2, and 3 appeared to remain unchanged by 1994.

By 2006, the general vicinity of Sites 1, 2, and 3 is almost completely developed with commercial and/or industrial facilities and buildings, with some residential land near Site 3 to the northwest. Site 1 appeared to be developed with graded land. No changes were apparent in the 2010 and 2014 aerial photographs. Site reconnaissance on March 2018 indicated that the land on Site 1 was a mix between asphalt, dirt, and gravel.

A historic land use of environmental concern associated with the Sites is agriculture. However, based on redevelopment of the Sites 2 and 3, and the likelihood that any soil contaminated by agricultural use (i.e., pesticides) was removed or redistributed and diluted during redevelopment

activities, this former use on Sites 2 and 3 does not present a potential environmental concern to the project.

Site 1 has undergone limited development and has a lower likelihood for removal or redistribution and dilution of any soil possibly contaminated by agricultural pesticide application. Due to the historical agricultural usage of Site 1, this listing is considered an AOC.

No RECs were observed as a result of the aerial photographs review.

Representative aerial photographs are included in Appendix C.

6.2.3 Topographic Map Review

Group Delta reviewed historic topographic maps for the Site and adjacent areas provided by EDR. Historic topographic, property, and road maps were reviewed to evaluate historic land uses in the general area, evaluate changes that have occurred over time, and provide a context for development within the Site vicinity. The topographic maps are provided in Appendix C.

Historical Topographic Maps were provided by EDR for the following years: 1897, 1900, 1903, 1933, 1941-1942, 1944, 1953-1954, 1966-1967, 1973, 1976, 1981, and 2012.

From 1897 through 1944, the maps do not indicate any specific land uses at Sites 1, 2, and 3, or the surrounding vicinity.

The 1953-1954 map depicts a small area of agricultural land north-adjacent to Site 2. More structures appeared within the vicinity of the Sites.

By 1966-1967, commercial buildings appeared on Site 3.

By 1973, more commercial buildings appeared on the adjacent properties to Sites 1, 2, and 3.

From 1976 through 2012, no apparent significant changes were noted on the topographic maps. The March 14, 2018 site reconnaissance confirmed that the buildings on Site 3 were associated with the former Oakwood Interiors site and remained onsite.

Based on the topographic maps for the Site, a historic land use of environmental concern associated with the Sites is agriculture. However, more details on this former land use can be ascertained from the aerial photographs discussed in Section 6.2.2.

No RECs were observed as a result of the topographic map review.

Representative topographic maps are included in Appendix C.

6.2.4 City Directory Review

City directories of the Sites and surrounding vicinity at discrete intervals from 1934 to 2014 were provided by EDR's Digital Archive. The city directories were reviewed to evaluate previous land uses at the Sites and their vicinity.

Several owners were listed at 1516 S. Cucamonga Ave. site. Beginning in 1951 through 2003, all owners listed consisted of some variation of the name Binnell (e.g., Binnell Wesley, Binnell Poultry Ranch, Binnell Wesley Carolyn, etc.).

Private owners were listed at the 1440 S. Bon View Ave. site between 1934 through 1960.

Several owners were listed at 1333 S. Bon View Ave. including Cal Alloy Castings, Inc., Okeystone Rims, Keystone Products, Inc., Oakwood Interiors, and City of Ontario between 1970 to 2014. These findings were consistent with the online records in section 6.3.1.

No listings of note were discovered for the properties in the surrounding vicinity.

No additional RECs were identified as a result of the city directory review.

A copy of the City Directory findings is provided in Appendix C of this report.

6.3 Regulatory Agency Records

Regulatory agency records include online records maintained by California state agencies and local department records of the Certified Unified Program Agencies (CUPA) for the project area.

6.3.1 Online Records

Group Delta reviewed available online records maintained by California state agencies for addresses associated with potential acquisition parcels. Additionally, online records for listings adjacent to Sites were also reviewed.

Department of Toxic Substances Control

Group Delta reviewed available DTSC files published on the online records database Envirostor. The purpose of this search was to identify any evidence of unauthorized releases of hazardous materials to the surface, subsurface soil and groundwater.

One listing was identified on the Envirostor database for one of the Sites. The listing is summarized as follows:

Oakwood Interiors Site, 1333 S. Bon View Ave., Ontario, CA (Site 3)

According to Envirostor, the property was owned by Cirus & Bernette Harding until 1961. The southern 3 acres were acquired by Montclair Motor Homes Inc. The earliest known industrial use was for the storage and repair of motor homes by Montclair. The property was leased in 1964 to Keystone Bumper and Automotive. Activities included distribution of automotive wheels and bumpers and polishing, plating, and final finishing of wheels and bumpers. In 1968, Keystone became the owner and sole tenant. In the 1980's, Intermark Inc. acquired Keystone. Keystone's name changed to Dynmark in 1985 and Dynmark filed bankruptcy in 1991. In 1992, the operations terminated.

Dynmark conducted six different types of operations in former Building 3: paint line, plating line, paint spray booth, casting and aluminum machining, a strip line, and a casting and machining area. Chemicals used were cleaning solutions, chromic acid and phosphate rinsing solution, and hexavalent chromium. Nickel and zinc compounds were used in dip tanks to plate the wheels. Biocides were reportedly used in the coolant tower. Hydraulic fluid and dye lubricant were used to operate and maintain the casting machinery. Molten aluminum, sulfuric acid, and lead were also used. For 27 years, plating and metal manufacturing operations were on-going onsite.

Two USTs, a 1,000-gallon gasoline underground storage tank (UST) and a 12,000-gallon diesel UST on the property were removed in January 1987 under supervision of the County of San Bernardino.

Between 1988 and 1991, subsurface investigations by Groundwater Technologies revealed a variety of metals on site. A Phase I was conducted by GeoResearch in 1992 and concluded that a number of AOCs existed on the site. In 1993, GeoResearch performed several subsurface investigations to collect soil samples from nine identified locations including: paint line, plating line, spray booth, casting and aluminum machining area, strip line, former steam cleaning area, catch basin, plating lines and clarifier area, and wastewater treatment and bulk storage area. In 1995, a Remedial Action Plan (RAP) was prepared by Bradley Environmental followed by excavation of soils below Building 8 in 1996. The metal-containing soil was treated on site and returned to the excavation.

According to a Site Investigation Report dated November 2006, approximately 90 tons of contaminated concrete was removed from the Site as hazardous waste. Approximately 500 tons of crushed rock and treated soils were transported from the Site as non-hazardous. An additional 150 tons of clean concrete was also transported off-site. Both treated and clean imported soil were used to refill excavated areas and soil was compacted to a 90 percent maximum density. The excavation was limited to the eastern portion of former Building 8. Soils were replaced at depths ranging from 5 to 40 bgs.

The property was vacant from 1992 until 1996 when Bon View Corporation purchased it from the U.S. Bankruptcy Court and converted the facility into an Oak Furniture manufacturing business.

The chemicals used in furniture manufacturing consisted of stain, acetone, water-based lacquer thinner, and motor oil stored in approximately 30 55-gallon drums.

On June 2000, DTSC entered into a VCA with Bon View Corporation (Proponent) to review and comment on reports of prior investigations and remediation conducted at Oakwood Interiors Site. All prior activities at the property were conducted without DTSC oversight. The materials were deemed not to be equivalent to a PEA and a PEA was requested.

Clayton Group Services, Inc (Clayton) conducted an investigation for the property in 2006 that included collection of both soil and soil vapor samples to support preparation a human health risk assessment. DTSC oversaw the implementation and approval of the site investigation.

In September 2008, a draft Soil Management Plan was submitted to DTSC for approval. The draft was approved in October 2008 as a template in the event future excavation activities are proposed at the Site.

The property has a land use restriction as of December 2008, prohibiting day care centers, elder care centers, hospital use, excavation of contaminated soils without agency review and approval, public or private schools for persons under 21, and residential use.

The property was investigated and certified with a land use covenant due to contamination left in place with Land Use Control (LUC) inspections conducted annually to ensure that the contamination under the cap is not disturbed.

April 2017, the City of Ontario Public Works Department purchased the property from Oakwood Interiors and began using it as an equipment and materials storage facility. The former office building on the west portion of the Site was also remodeled for use by their Revenue and IT Departments. Former Building 6 was provided to City of Ontario Waste Management to store household trash containers and other equipment.

According to the 2017 Annual Inspection Report, chemicals of potential concern (COPCs) are as follows: arsenic, chromium, hexavalent chromium (Cr+6), and nickel in soil and air as particulates and chloroform, dibromochloromethane, tetrachloroethylene (PCE), and trichloroethylene (TCE) in air as vapor. The property is currently annually inspected with no violations recorded.

City of Ontario and DTSC agreed that the following areas were identified in the LUC and that the DTSC would be notified when excavation activities are planned for these areas:

- Three truck wells
- Former small paint line immediately behind the main office building
- Former foundry area
- Former 1,000-gallon gasoline UST (previously closed by San Bernardino County Department of Environmental Health Services)

- Former 12,000-gallon diesel UST (previously closed by San Bernardino County Department of Environmental Health Services)
- Former welding shop
- Former Building 8, including the former plating shop
- Former catch basin in former Building 6

Future construction on this property that includes excavation of LUC areas will need a finalized Soil Management Plan and DTSC approval prior to excavation activities at the LUC areas. The work may require DTSC oversight. Due to the LUC and remaining COPCs on this property, this listing is considered a REC to the project.

No additional Envirostor listed properties were identified with 1500 feet of any of the Sites.

State Water Resources Control Board

Group Delta reviewed available SWRCB files published on the online records database GeoTracker. GeoTracker contains recorded data of unauthorized releases of petroleum products and hazardous materials to the groundwater and other cases handled by the SWRCB or the Regional Boards. Cases typically handled by the Regional Boards include releases from USTs.

Numerous listings within the vicinity of project limits were identified on the GeoTracker database and found not to pose a hazardous waste impact to the project based on the following, or a combination thereof, and are not discussed further:

- The listing indicated the reported release affected the soil only and was not on, or immediately adjoining, the project limits;
- A reported release affecting soil only occurred at a property immediately adjacent to the project limits, but is located at a distance sufficiently far away as to not be an environmental concern to the project, and/or;
- The listing indicated the reported release affecting the soil vapor is located at a distance unlikely to be an environmental concern to the project.

None of the Sites were identified on the GeoTracker database.

Three (3) adjacent properties were identified on the GeoTracker database. A summary of findings related to these cases is as follows:

1. Former Merchant's Delivery Systems – 1406 S. Cucamonga Ave., Ontario, CA

According to GeoTracker, a diesel leak affecting soil only was discovered in March 1999 and a case was subsequently opened. The case was reportedly closed December 2000 with a No-Further-Action (NFA) letter. No environmental data associated with the release was uploaded to the GeoTracker website.

2. Ontario Municipal Service Center – 1425 Bon View Ave., Ontario, CA

According to GeoTracker, a leak was discovered affecting soil on October 1996. Potential contaminants of concern included waste oil, motor, hydraulic and lubricating materials. Verification monitoring was performed March 1997. No environmental data associated with the release was uploaded to the GeoTracker website; however, a case closure letter for the LUST dated April 1997 stated that no further action was required for the release.

3. Gonzales and Sons – 844 Woodlawn Street, Ontario, CA

According to GeoTracker, a diesel leak affecting soil only was discovered in February 1988 and was immediately followed with a site assessment. In March 1988, excavation of soil was conducted and the case was subsequently given closure. No environmental data associated with the release was uploaded to the GeoTracker website. Based on the limited nature of the release, the completed remediation, case status, and distance from Site 3, this listing is not considered a REC.

For a determination of whether the listings 1 and 2 summarized above are a REC to the project, refer to Section 6.3.2 – Local Department Records.

California Department of Oil, Gas, and Geothermal Resources

Group Delta reviewed mapping available on the DOGGR website for oil and gas wells on the project or in the vicinity of the project. The mapping shows no operational or abandoned oil or gas wells within 1 mile of the project area.

Pipeline and Hazardous Materials Safety Administration

Group Delta reviewed available files through the online National Pipeline Mapping System (NPMS) database maintained by the PHMSA. NPMS is a Geographic Information System (GIS) database of pipeline information for the specific intent of emergency response. The database does not include natural gas lines or liquefied natural gas facilities.

The mapping shows no gas transmission pipelines or hazardous liquid pipelines within 1000 feet of the Sites.

6.3.2 Local Department Records

Group Delta requested available records from applicable local agencies for Sites and adjacent properties in the area of the potential O&M facility Sites that were identified on high-risk databases in the EDR regulatory database report and located at a distance that could pose potential environmental impacts to or within the project limits. Group Delta also conducted an analysis of potential project impacts posed by the proximity of former releases associated with these properties to the project alignment.

San Bernardino County Fire Department Office

Environmental records from SBCFD were reviewed on March 26, 2018. A summary of environmental records reviewed at SBCFD is provided below, and includes Group Delta's conclusions pertaining to project impacts posed by these properties.

1. Adjacent Property – Former Merchant's Delivery Systems – 1406 S. Cucamonga Ave., Ontario, CA

An unauthorized release of diesel leak was discovered on March 1999. The cause was due to the dispenser and associated piping. The UST was not removed but a modification of the UST system was completed, including a dispenser upgrade to remedy the leak. The highest groundwater depth bgs was 250 ft with flow direction generally to the south. No drinking water wells or surface waters were affected. During the upgrade activity, two soil samples were reportedly collected including one beneath the gasoline dispenser and one beneath the diesel dispenser. However, only results for the diesel dispenser soil sample were reported. The soil sample reported total petroleum hydrocarbons in the gasoline range (TPH-g) at 3.3 parts per million (ppm), total petroleum hydrocarbons in the diesel range (TPH-d) at 14,000 ppm, and toluene at 0.0057 ppm. The diesel impacted soil beneath the diesel dispenser was reported as localized and limited in extent.

Borings were also drilled at the diesel dispenser as well as the gasoline tank during upgrade activity. The soil samples collected from the borings did not have detectable concentrations of TPH-g; TPH-d; Benzene, Toluene, Ethylbenzene, Xylenes (BTEX), and Methyl tert-butyl ether (MTBE).

According to a report of findings for this site dated September 2000, 14 soil samples were collected immediately adjacent and below to the single point of diesel impact reported above. No petroleum hydrocarbons, aromatic constituents, and oxygenates were detected in all 14 samples.

In December 2000, a remedial action completion certification was issued to the site by the Hazardous Materials Division of SBCFD.

Impact Analysis: Due to the results of the additional subsurface investigation and regulatory status of this listing, this listing is not considered a REC to the Sites.

2. Adjacent Property – Ontario Municipal Service Center – 1425 Bon View Ave., Ontario, CA

In October 1996, SBCFD received notification that an unauthorized release occurred at the Ontario Municipal Service Center. The notification appears to be associated with the removal of four (4) USTs on October 8, 1996. According to the closure report for the 4 USTs prepared by Cape Environmental Management Inc (Cape) dated November 1996,

the 4 USTs removed included one 1,000-gallon motor oil UST, one 1,000-gallon hydraulic oil UST, one 280-gallon paint thinner UST, and one 280-gallon lacquer thinner UST. Oversight of soil sampling activities was conducted by a SBCFD inspector.

Soil samples were collected following the removal of the USTs. The motor oil and hydraulic oil UST samples were submitted for Halogenated Volatile Organic Compounds (HVOCs) and Total Recoverable Petroleum Hydrocarbons (TRPH) analysis. The samples from the two USTs containing thinners were submitted for VOCs and TPH as Stoddard Solvent. Reported laboratory analytical results do not indicate that a release of UST contents occurred. Modest TRPH concentrations were noted from the motor oil and hydraulic oil UST excavation, but these concentrations were determined not to be indicative of an oil leak and were likely attributable to naturally occurring organic matter in the soil. However, soil beneath a “Lube Room” associated with ancillary UST piping appeared to have been impacted by a piping leak at the vertical piping leading to the pneumatic oil pumps.

A 5,000-gallon waste oil UST was also removed from the site on October 10, 1996, per a closure report for the UST prepared by Cape. Oversight of soil sampling activities was conducted by a SBCFD inspector. Soil samples were collected following the removal of the UST, and submitted for Halogenated VOCs, TRPH, and total metals. Soil samples from within the waste oil UST excavation did not indicate a release of UST contents has occurred. HVOCs were not detected and metals concentrations were at background levels. However, a sample from surface soil adjacent to the waste oil UST contained PCE at a concentration of 54 micrograms per kilogram ($\mu\text{g}/\text{kg}$) and 1,1,1, -trichloroethane at a concentration of 19 $\mu\text{g}/\text{kg}$. The same soil sample also contained 16,000 milligrams per kilogram (mg/kg) TRPH. Another soil sample collected approximately 2 ft below the concrete surface was reported to contain 1,900 mg/kg TRPH. Based on the reported analytical results, it was recommended that additional subsurface investigation of the area adjacent to the waste oil UST be conducted to delineate the horizontal and vertical distribution of detected HVOCs and TRPH in soil.

A Soil Investigation (SI) Work Plan was submitted on December 1996 to SBCFD to delineate the lateral and vertical extent of soil impacts at the site.

According to the SI Report dated February 1997, based upon the results of the analytical testing and field observations, no further additional investigations were recommended for the site. A no further action letter was issued by the Risk Management Department on April 1997.

Impact Analysis: Due to the findings from the SI Report and the regulatory status of this listing, this listing is not considered a REC to the Sites.

South Coast Air Quality Management District

Records request forms were submitted to SCAQMD on March 12, 2018. A response was received on March 20, 2018 for a SCAQMD notification report for demolition of a building that contained asbestos at 1516 S. Cucamonga Ave. in May 2004. No other records were received for the other sites.

Group Delta also researched records associated with the Sites from the Facility Information Detail (FIND) database maintained by SCAQMD. The database contains records for facilities that are required to have permits to operate equipment that releases pollutants into the air.

1333 S. Bon View Ave. is listed on the website under several different facility names. The permits are consistent with previous Site operations discussed above. 1440 S. Cucamonga Ave. and 1516 S. Cucamonga Ave. were not listed in the database. The adjacent site on 1425 S. Bon View Ave. was listed under City of Ontario, Equipment Services and City of Ontario, Public Yards.

No additional RECs were observed on the Sites or adjacent properties as a result of SCAQMD file review.

San Bernardino County Department of Environmental Health Services

Records request forms were submitted to SBCDEHS on March 15, 2018 for the 1333 S. Bon View Ave. site for records pertaining to the former USTs on site that were removed under DHS oversight. Activities related to hazardous materials and USTs are currently overseen by the SBCFD.

The department did not have any records of removal of the former USTs. However, according to the SI Report by Clayton (April 2006), the USTs were removed on January 14, 1987 under the supervision of a San Bernardino County Department of Environmental Health Services inspector and received closure letters for these USTs.

No RECs were observed as a result of SBCDEHS file review.

7.0 SITE RECONNAISSANCE

7.1 Methodology and Limiting Conditions

The site reconnaissance for the Sites was performed by Ms. Elaine Horng of Group Delta on March 14, 2018.

The purpose of the site reconnaissance was to observe the present uses and conditions for the Sites as they relate to the possible presence of potentially hazardous substances and petroleum products. Additionally, adjoining properties were observed from the Sites and adjacent public roads to identify land uses and the potential presence of structures, operations, activities, or environmental conditions that may involve the use, treatment, storage, disposal, or generation of hazardous wastes and/or petroleum products that may pose an environmental concern to the Sites. An inspection of the interior of structures was not performed for the main building at 1440 S. Cucamonga Ave., the two small materials storage buildings at 1440 S. Cucamonga Ave., and Warehouse 4 at 1333 S. Bon View Ave. Photographic documentation of the Sites is included in Appendix D of this report. The weather during the visit for the Sites was mostly cloudy and cool with temperatures in the lower 60 degrees Fahrenheit.

7.2 Site Observations

A summary of observations made during the site reconnaissance is provided below.

7.2.1 Target Properties

The site reconnaissance was performed by foot, and included the City of Ontario properties (Sites 1, 2, 3) on S. Cucamonga Ave. and S. Bon View Ave. Where possible, adjacent properties were also observed from the sidewalk.

1. Site 1: 1516 S. Cucamonga Ave. (APN 1050-131-02) and south-adjacent APN 1050-131-03

The east two-thirds of the APN 1050-131-02 is unpaved and is used as a contractor yard for street sweep debris, landscaping materials and supply, and truck storage. The west one-third of the property is paved with asphalt and is used to store mobile backup generators and empty metal debris bins. The south-adjacent parcel (APN 1050-131-03) is currently used as a solid waste bin storage lot for both new and used bins. Trucks are also stored onsite from fleet services.

2. Site 2: 1440 S. Cucamonga Ave. (APN 1050-141-07)

Site 2 is currently in use as a City yard and is considered part of the repair fleet services and public works administrative offices on 1425 S. Bon View Ave.

In the northwest portion of Site 2 are two small materials storage buildings that contained hazardous materials placards. These buildings are under an awning where paints are mixed for street striping.

Three CNG fueling stations used for fueling City vehicles are located on the southwestern, center, and eastern portion of Site 2.

On the east side of Site 2, the 1440 S. Cucamonga Ave. building is used for administrative offices and storage. The building faces east towards S. Cucamonga Ave.

3. Site 3: 1333 S. Bon View Ave. (APN 1049-421-01 and north-adjacent APN 1049-421-02)

This main building at Site 3 is currently used by the Ontario Municipal Utilities Company utility and customer service center. The main office is on the northwest portion of Site 3.

The remainder of Site 3 is used for indoor storage of City materials and is divided into three warehouses (2, 3, and 4).

Warehouse 2 is east-adjacent to the main office and is used for City storage surplus and storage of concrete and metal casings for the utility department. On the south side of Warehouse 2, an awning extends over additional outdoor storage for trucks and materials. Next to the southeast corner of Warehouse 2 is an enclosed vault where two propane tanks formerly were placed.

Warehouse 3 is on the east portion of Site 3 and is used for storage of City surplus and new empty solid waste bins.

Warehouse 4 is on the southeast portion of Site 3 and is used for storage of cables for Verizon telephone lines.

7.2.2 Adjacent Properties

Properties immediately adjacent to the Sites include residential properties, offices, schools, and commercial/industrial facilities.

Site 1: 1516 S. Cucamonga Ave. (APN 1050-131-02 and south-adjacent APN 1050-131-03)

- North: Site 2
- South: Two commercial facilities
- East: S. Cucamonga Ave. and various commercial retail buildings
- West: Baldy View ROP Career Training Center

Site 2: 1440 S. Cucamonga Ave. (APN 1050-141-07)

- North: Commercial facilities and Household Hazardous Waste Collection Center
- South: Site 1
- East: Various commercial facilities
- West: Ontario Public Works Administrative Building and Fleet Repair Services and office

Site 3: 1333 S. Bon View Ave. (APN 1049-421-01 and north-adjacent APN 1049-421-02)

- North: Commercial facilities and offices
- South: Ontario Public Works Administrative Building and Fleet Repair Services and office
- East: Commercial facilities and offices
- West: Residential properties and commercial facilities and offices

No observations of environmental concern to the Sites were observed during the reconnaissance of adjacent properties.

7.3 Site Findings

Upon reconnaissance of Site 1, there was no evidence of drums, hazardous substances, unidentified substance containers, odors, pools of liquid, or any other RECs.

For Site 2, there were three CNG fueling stations on the site, and an area used for mixing paints for street lines with two buildings that were observed to contain hazardous materials. No spills or leaks associated with the paints and other hazardous materials were observed. The use of paints on other hazardous materials observed during Site reconnaissance is not considered an AOC.

For Site 3, some evidence of the former welding shop, truck wells, and former plating building were observed on site. The other former areas that are under LUC as discussed in section 6.3.1 for the former Oakwood Interiors site are likely areas that were capped. In Warehouse 2, bird droppings and saw dust were observed on the floor throughout the warehouse. No evidence of unidentified substance containers, odors, pools of liquid, or any other RECs were observed. The observed conditions during the Site reconnaissance were consistent with the findings in section 6.3.1 for the former Oakwood Interiors site. During the reconnaissance for the Site, no additional RECs were observed.

8.0 INTERVIEWS

8.1 Interview with the Owner

An interview was conducted with Mr. Michael Sigsbee, Utilities Administrative Services & Solid Waste Director from the City of Ontario, on March 14, 2018. According to Mr. Sigsbee, he has personal knowledge regarding the three Sites consistent with the available online and local agency records. An owner interview questionnaire was completed by Mr. Sigsbee and received by Group Delta on March 26, 2018.

Additional noteworthy observations resulting from the owner interview include: a) Mr. Sigsbee indicated that the southern APN in Site 1 has an address of 1600 S. Cucamonga Ave. 1600 S. Cucamonga Ave. has been owned by the city since 2000, and; b) 1516 S. Cucamonga Ave., the northern APN in Site 1, was reportedly previously occupied by a residence and has been owned by the city since 2003. Sewer and potable water connections are reportedly available onsite but not in use.

No additional RECs were identified as a result of the interview.

8.2 User Questionnaire

Group Delta provided a User Questionnaire to be completed by the future User of the document. The format of the User Questionnaire is in accordance with the All Appropriate Inquiries (AAI) standard and ASTM 1527-13. The User Questionnaire serves to collect information pertaining to RECs on the Site, especially those that may not be visually apparent or found in public records.

The User Questionnaire was provided to Parsons to be forwarded to Omnitrans and appropriate City officials. The User Questionnaire was also provided to SBCTA. As of the date of this report, Group Delta has not received any completed User Questionnaires from Omnitrans. Group Delta attempted to conduct an interview with Mr. Andres Ramirez, Chief of Transit and Rail Programs with SBCTA via email on December 7, 2017. As of the date of this report, Group Delta has not received a response to written interview questions transmitted to Mr. Ramirez. Should a response be obtained which impacts the findings of this assessment, an updated report will be transmitted.

No RECs were identified as a result of the responses to the User Questionnaire.

8.3 Interview with Local Government Official

Group Delta interviewed Ms. Maria Molina of SBCFD regarding knowledge of environmental concerns within the project limits. According to Ms. Molina, she does not have personal knowledge regarding any properties within the project limits.

No RECs were identified during the interview.

9.0 SIGNIFICANT DATA GAPS

9.1 Data Gaps

In general, a Data Gap is the inability to gather information as prescribed in the ASTM Standard Practice despite good faith efforts. This may include, but not be limited to, a lack of historical information, inability to interview knowledgeable individuals, or inspect portions of the Site. The following Data Gaps were encountered during this assessment:

Group Delta was unable to conduct an interview with SBCTA regarding their knowledge of potential environmental conditions associated with the proposed project. This data gap is not considered significant.

9.2 Data Failures

The objective of reviewing historical information is to identify all obvious uses of the Site from first developed use or 1940, whichever is earlier, in order to identify the likelihood of previous uses resulting in a REC(s). Generally, a Data Failure is when all obvious uses of the site cannot be determined despite gathering and reviewing all of the standard historical sources that are reasonably ascertainable. A historical source is considered reasonably ascertainable if it is (1) publicly available, (2) obtainable within a reasonable period of time and at a reasonable cost, and (3) practically reviewable.

No Data Failures were encountered during the course of this assessment.

10.0 FINDINGS AND CONCLUSIONS

Group Delta has performed an ISA in conformance with the scope and limitations of ASTM E1527-13. The focus of the ISA were the three potential O&M facility Sites and adjacent parcels.

10.1 Potential O&M Facility Sites

The ISA identified the following one (1) REC and one (1) AOC associated with Sites:

AOC – Site 1: 1516 S. Cucamonga Ave., Ontario, CA

Site 1 appears to have undergone limited development since it was used for agricultural purposes and the likelihood of removal or redistribution and dilution of any soil possibly contaminated by agricultural use is considered low. Due to the historical agricultural usage of Site 1, the potential for residual pesticides including organochlorine pesticides (OCPs) and arsenic is considered an AOC.

REC - Site 3: 1333 S. Bon View Ave. (APN 1049-421-01 and north-adjacent APN 1049-421-02)

Various industrial activities were conducted on Site 3 from beginning as early as 1961. These activities included repair of motor homes, painting, plating, casting, machining, and wood staining. Between 1988 and 2008, several site investigations were performed on the Site which currently has oversight from the DTSC.

Site 3 has a land use restriction as of December 2008, prohibiting day care centers, elder care centers, hospital use, excavation of contaminated soils without agency review and approval, public or private schools for persons under 21, and residential use.

Site 3 was investigated and certified with a land use covenant due to contamination left in place with Land Use Control (LUC) inspections conducted annually to ensure that the contamination under the cap is not disturbed.

Chemicals of potential concern for Site 3 are as follows: arsenic, chromium, hexavalent chromium (Cr+6), and nickel in soil and air as particulates and chloroform, dibromochloromethane, PCE, and TCE in air as vapor.

City of Ontario and DTSC agreed to identify the following areas in the LUC and that DTSC would be notified when excavation activities are planned for these areas:

- Three truck wells
- Former small paint line immediately behind the main office building
- Former foundry area
- Former 1,000-gallon gasoline UST (previously closed by San Bernardino County DEH)
- Former 12,000-gallon diesel UST (previously closed by San Bernardino DEH)

- Former welding shop
- Former Building 8, including the former plating shop
- Former catch basin in Former Building 6

During site reconnaissance, it was noted that Former Building 6 is part of the southern portion of Warehouse 3 and Former Building 8 is part of the northern portion of Warehouse 3.

These areas are identified in Appendix E Online Database File Review Diagram from the 2017 Annual Inspection Report (American Integrated Services, Inc, February 2018).

Proposed construction on Site 3 will require the development of a final Soil Management Plan (SMP) for DTSC approval. The SMP will be implemented during construction under the oversight of DTSC.

10.2 Adjacent Properties

No RECs were identified over the course of this ISA for adjacent properties to the three Sites.

11.0 RECOMMENDATIONS

Group Delta provides the following recommendations associated with Site 1 located at 1516 S. Cucamonga Ave., Ontario, CA:

- Due to the historical agricultural usage of Site 1 (APN 1050-131-03-0000 and APN 1050-131-02-0000), a limited soil screening is recommended to assess for the presence of residual pesticides including arsenic and OCPs in Site 1's soil.

Group Delta provides the following recommendations associated with Site 3 at 1333 S Bon View Ave, Ontario, CA:

- DTSC must be engaged and notified of the proposed project. Any changes to the responsible party (RP), cleanup liability, and/or the Voluntary Cleanup Agreement for the DTSC case will need to be determined during the property acquisition process.
- A Final SMP must be developed for the Site. The plan must be reviewed and approved by the DTSC. A SMP Template has been approved by the DTSC which may facilitate this process.
- DTSC will provide oversight during earthwork activities for the LUC areas on the Site. The process will likely involve reporting to the DTSC on the status of construction and remediation.
- Following remediation, the status of the case and land use restrictions should be revisited with the DTSC.

12.0 DEVIATIONS

This ISA was prepared in general accordance with ASTM Standards. No deviations to the ASTM Standard Practice associated with the preparation and development of this ISA, except for those identified in Section 3.3 – Limitations and Exceptions, including owner interviews and on-site reconnaissance for acquisition parcels, are associated with the preparation and development of this ISA.

13.0 ADDITIONAL CONSIDERATIONS

This section contains generic descriptions of sources of hazardous waste or hazardous materials that are frequently encountered on construction projects. This section is a standard section required by the Caltrans ISA Guidance Document (Geomatrix Consultants, Inc., 2006) and is not intended to be project-specific; therefore, the media discussed below may not be present on the project.

13.1 Asbestos Containing Materials

Asbestos was used in many building materials prior to 1978; however, asbestos may have also been used into the early 1980s. ACMs include fireproofing, acoustic ceiling material, transite pipe, roofing materials, thermal insulation, and other building materials. It is of primary concern when it is friable (that is, material that can be easily crumbled). During demolition, if not properly identified and mitigated, asbestos fibers could become airborne.

It is possible that ACMs were used in the structures. An ACM survey should be conducted for all structures impacted by the proposed project.

13.2 Fill

Fill material is common within urban areas where former sloughs or other drainage or low-lying areas historically existed. Fill material is also commonly used on embankments and bridge approaches. Fill material can consist of soil, but also contain miscellaneous debris including structural material (e.g., bricks, wood, concrete, etc.), discarded chemicals and oil, and other materials that could potentially be of environmental concern to a site. It is difficult to identify the presence of fill during an ISA; however, its possible presence should be noted.

13.3 Lead-based Paint

Regulatory actions restricted the amount of lead in paints and primers manufactured after January 1, 1978, and limited the uses of paints in areas where consumers would have direct access to painted surfaces in non-industrial facilities. Prior to 1978, LBPs may have been used in building construction or maintenance. An LBP survey should be conducted for all structures impacted by the proposed project.

13.4 Treated Wood Waste

Treated wood is typically treated with preserving chemicals that protect the wood from insect attack and fungal decay during its use. During construction, TWW may be generated when posts along metal beam guard railing, thrie beam barrier, piles, utility poles, or roadside signs are removed. The DTSC requires that TWW either be disposed of as a hazardous waste, or if not tested, the generator may presume that TWW is a hazardous waste (to avoid the time and

expense involved in completing laboratory testing) and manage the waste by Alternative Management Standards (AMS). The AMS are described in the California Code of Regulations, Title 22, Division 4.5, Chapter 34. The AMS lessen storage requirements, extend accumulation periods, allow shipments of presumed hazardous waste TWW without manifests and registered hazardous waste haulers, and permit disposal at specific non-hazardous waste landfills. Utility poles are located within the project limits that may require removal; testing of the poles is not required.

13.5 Soil Management

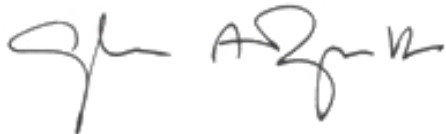

Concentrations of contaminants within areas associated with the project may represent a potential health risk for Site workers performing earthwork activities. The contractor should implement appropriate health and safety procedures to prevent or minimize exposure of potential impacted soil to workers, the environment, and the surrounding community. Additionally, It is also recommended that contingency measures be developed by the construction contractor, including development of a Soil Management Plan, that outline soil management requirements in the event contaminated media is encountered during project construction. Workers should conduct their activities in accordance with State of California, Division of Occupational Safety and Health Administration (DOSH) applicable rules as outlined in the contractor's Health and Safety Plan (HASP) and in the Site Community Health and Safety Plan (CHSP), if applicable. A project-specific HASP should be prepared and implemented by the contractor in association with disturbing, handling, and transporting contaminated soil. During the construction activities and any other soil generating activities, workers should use basic health and safety precautions when handling or disturbing soil as outlined in the contractor's HASP. Precautions should include:

- The use of engineering controls to reduce and control hazards;
- The use of appropriate PPE (e.g., gloves, Tyvek coveralls, etc.) when handling soil;
- Decontamination procedures (e.g. washing of face and hands) before eating, drinking, or smoking after conducting subsurface intrusive work, and;
- Decontamination procedures for equipment that may have come into contact with potentially impacted soil within the construction area.

14.0 ENVIRONMENTAL PROFESSIONAL QUALIFICATIONS AND SIGNATURE

As required by 40 Code of Federal Regulations (CFR) § 312.21(d) and Section 12.2 of ASTM 1527-13, the environmental professional's statement and signature are provided below. In support of the contents of this report:

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental professional as defined in §312.10 of 40 CFR 312 and I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Site. I have developed and performed the AAI in conformance to the standards and practices set forth in 40 CFR Part 312.

Glenn Burks, Ph.D., P.E.
Director of Environmental Services

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS list

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 12/11/2017 has revealed that there is 1 SEMS site within approximately 0.5 miles of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
ONTARIO DRUMS	1516 SOUTH BON VIEW	SSW 1/8 - 1/4 (0.139 mi.)	O70	177

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 12/11/2017 has revealed that there are 2 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 12/11/2017 has revealed that there is 1

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/11/2017 has revealed that there are 17 RCRA-SQG sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 10/30/2017 has revealed that there are 9 ENVIROSTOR sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

SLIC: Cleanup Program Sites (CPS; also known as Site Cleanups [SC] and formerly known as Spills, Leaks, Investigations, and Cleanups [SLIC] sites) included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the SLIC list, as provided by EDR, has revealed that there are 2 SLIC sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, has revealed that there are 3 UST sites within approximately 0.25 miles of the target property.

State and tribal voluntary cleanup sites

VCP: Contains low threat level properties with either confirmed or unconfirmed releases and the project proponents have request that DTSC oversee investigation and/or cleanup activities and have agreed to provide coverage for DTSC's costs.

A review of the VCP list, as provided by EDR, and dated 10/30/2017 has revealed that there are 2 VCP sites within approximately 0.5 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/11/2017 has revealed that there is 1 RCRA NonGen / NLR site within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
BONANZA ALUMINUM COR	1420 S. BON VIEW AVE	SW 0 - 1/8 (0.038 mi.)	H32	112

FUDS: The Listing includes locations of Formerly Used Defense Sites Properties where the US Army Corps Of Engineers is actively working or will take necessary cleanup actions.

A review of the FUDS list, as provided by EDR, and dated 01/31/2015 has revealed that there is 1 FUDS site within approximately 1 mile of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

CA BOND EXP. PLAN: Department of Health Services developed a site-specific expenditure plan as the basis for an appropriation of Hazardous Substance Cleanup Bond Act funds. It is not updated.

A review of the CA BOND EXP. PLAN list, as provided by EDR, and dated 01/01/1989 has revealed that there is 1 CA BOND EXP. PLAN site within approximately 1 mile of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
ISAAC COHEN AND SON	717 SOUTH TAYLOR AVE	NNW 1/4 - 1/2 (0.431 mi.)	AA117	290

HAZNET: The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000-1,000,000 annually, representing approximately 350,000-500,000 shipments. Data from non-California manifests & continuation sheets are not included at the present time. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, & disposal method. The source is the Department of Toxic Substance Control is the agency. This database begins with calendar year 1993.

A review of the HAZNET list, as provided by EDR, and dated 12/31/2016 has revealed that there is 1 HAZNET site within approximately 0.001 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there is 1 EDR Hist Auto site within approximately 0.125 miles of the target property.

EPA Region: 09
Classification: Small Small Quantity Generator
Description: Handler: generates more than 100 and less than 1000 kg of hazardous waste during any calendar month and accumulates less than 6000 kg of hazardous waste at any time; or generates 100 kg or less of hazardous waste during any calendar month, and accumulates more than 1000 kg of hazardous waste at any time

Owner/Operator Summary:

Owner/operator name: NICK LANPHIER
Owner/operator address: 1333 S BON VIEW AVE
ONTARIO, CA 91761
Owner/operator country: Not reported
Owner/operator telephone: 909-930-3500
Owner/operator email: Not reported
Owner/operator fax: Not reported
Owner/operator extension: Not reported
Legal status: Private
Owner/Operator Type: Owner
Owner/Op start date: Not reported
Owner/Op end date: Not reported

Handler Activities Summary:

U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

. Waste code: D001
. Waste name: IGNITABLE WASTE

Environmental Interest/Information System

California Department of Toxic Substances Control EnviroStor System (DTSC-EnviroStor) is an online search and Geographic Information System (GIS) tool for identifying sites that have known contamination or sites for which there may be reasons to investigate further. The EnviroStor database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Registry ID: 110012250740

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System
AIR EMISSIONS CLASSIFICATION UNKNOWN

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HAZARDOUS WASTE BIENNIAL REPORTER

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

HAZARDOUS AIR POLLUTANT MAJOR

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity:

Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

CA BOND EXP. PLAN:

Responsible Party: RESPONSIBLE PARTY LEAD SITE CLEANUP WORKPLAN
Project Revenue Source Company: Not reported
Project Revenue Source Addr: Not reported
Project Revenue Source City,St,Zip: Not reported
Project Revenue Source Desc: The responsible party, Isaac Cohen and Son, Inc., is in compliance with an order. DHS has budgeted \$30,000 for oversight/monitoring of the RPs actions. DHS will recover 100 percent of direct costs plus staff costs and overhead related to the project. The RP will pay all costs of investigation and remediation.
Site Description: Isaac Cohen and Son, Inc. has been in business for over 20 years collecting and recycling metals and batteries. Lead and sulfuric acid were recovered from used batteries and recycled.
Hazardous Waste Desc: Hazardous wastes present onsite include sulfuric acid, lead, arsenic, and waste oil. It is estimated that 300 cubic yards of contaminated material is present onsite.
Threat To Public Health & Env: A direct contact threat exists because of the proximity of the site to other businesses and residential areas. There is also a possibility of ground water contamination.

Site Activity Status: The company has complied with past notices of violations issued by San Bernardino County Health Department and DHS. The responsible party has complied with a Section 25359.5 order to post and fence and secure the site. A RAO was issued in August, 1987. A RAP was approved by DHS on March 31, 1988 and is expected to be implemented by March, 1989.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

or sites for which there may be reasons to investigate further. The EnviroStor database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Longitude: -117.636923789978
Case Type: Cleanup Program Site
Case Worker: AK
Local Agency: Not reported
RB Case Number: 2084100
File Location: Regional Board
Potential Media Affected: Aquifer used for drinking water supply, Indoor Air, Soil, Soil Vapor
Potential Contaminants of Concern: Tetrachloroethylene (PCE), Trichloroethylene (TCE)
Site History: 1981 May City of Ontario inspectors conducted an inspection of the property in respond to a complaint noted a heavy accumulation of oil throughout the interior of the buildings, several building alteration and additions which were completed without proper permits, including oil tanks installed below the floor of one building. 1992 May, a site investigation was conducted by Athanor Environmental Services for Alger Manufacturing. Soil samples were collected from five soil borings every five feet to a depth of 30 feet at three locations, 35 feet at one location and 10 feet at one location. The soils encountered consisted of sand, silty sand, coarse gravel and cobbles. Selected soil samples were analyzed for volatile organic compounds (VOCs) by EPA method 8010 and total petroleum hydrocarbons (TPH) by EPA method 418.1. The highest concentration of tetrachloroethylene (24,000,000 parts per billion (ppb)) was detected in a soil samples collected from 25 feet below ground surface from boring #5 located near the old PCE sump, parts washing and evaporator area. The deepest soil sample from boring # 5 was found to contained 17,000,000 ppb of PCE at 30 ft. bgs. November 1992 an additional investigation was conducted near the former degreaser pit by Athanor Environmental Services for Alger Manufacturing. Five soil borings (A - E) were drilled near Boring #5 near the former degreaser pit. Soil samples were collected at 5 foot intervals. The borings extended to the following depths A 80 feet, B 55 feet, C 30 ft ,D 45 ft ,E 20 ft.(drilling crew wore level C protective equipment while drilling boring E.) The highest concentration of PCE (40,000,000 ppb) was detected in the at 25 feet bgs in soil boring B. The deepest soil sample was collected at 80 feet bgs from soil boring A and was found to contain 15, 000 ppb of PCE. The soil sample collected at 75 feet bgs from this same boring was found to contain 7,700,000 ppb of PCE. Depth to water was estimated to be between 380 and 390 feet bgs. It was noted in the drilling log for Boring A that a horizontal hole was found on the west side of the pit at 4 feet bgs. The screening vapor measurements ranged from 850 ppm to > 10,000 ppm. The vapor concentrations exceed the measurement of the instrument (10,000 ppm) between 25 and 75 feet bgs. The screening vapor measurements at 80 feet was 1630 ppm. Similar screening vapor concentrations were found in all the other borings. The soils encountered consisted primary of sand, silty sand, and gravel. 1993 September 15 case refered to the RWQCB by San Bernardino Environmental Health Services. 1999 August A site wide soil gas survey was conducted to determine the lateral extent of PCE. Soil gas samples were collected from 5 feet bgs. Very high concentrations of PCE was detected in soil vapor samples collected in the building at the corner of Bon View and California, in the vicinity of the former degreaser unit. 1999 September two soil vapor extraction wells VE1 and VE2 installed. 2000 August - October, soil vapor extraction system installed. Soil vapor extraction and treatment system fully operational October 23, 2000 2007 December - groundwater monitoring well, MW-1, installed south of the onsite building in the assumed downgradient direction of the former

degreaser. Groundwater was encountered at approximately 343 feet below ground surface (bgs). The well was screened from 220 to 380 feet bgs. Groundwater samples were collected March 9, 2008 and June 25, 2009. Tetrachloroethylene (433 and 431 micrograms per liter (a%g/l) and trichloroethylene (17.5 and 9.05 a%g/l) were detected during both sampling events. 2010 October - two additional groundwater monitoring wells installed. Vapor monitoring probes were installed outside the casings of the two wells. 2013-2014 three five additional vapor monitoring wells with multi-depth vapor sampling probes one groundwater monitoring well were installed. Tests were performed on the soil vapor extraction system to evaluate its performance.

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CTC: 86.5
 Current Owner: Local Government
 Future Prog: Not reported
 Description: The former Ontario Air National Guard Training Site consisted of 30.62 acres leased to the U.S. Air Force by the City of Ontario and 7.93 acres fee owned by the U.S. Air Force and leased to the California Air National Guard (CANG). It is on 1280 S. Tower Drive, Ontario, California. The site is located along the south-central border of Ontario International Airport. In 1985, the city of Ontario conveyed the entire airport to the City of Los Angeles, Department of Airports (LADA). The site was included in that conveyance. By supplemental agreement dated 11 May 1988, 27.41 acres were deleted from the lease between the Air Force and the City of Los Angeles, reducing the size of the site. The Air Force still leases 3.21 acres from LADA and still owns 7.93 acres fee. This area is currently used by the California Air National Guard (CANG), 148th Combat Communications Squadron. This portion contains supply and administrative facilities and a motor pool, and is ineligible for consideration under DERP-FUDS. Since 1988, the eligible portion of the site has been leased to various tenants whom have used the hangar.
 Current Program: Not reported
 History: The site has been used as an airport and for Air National Guard training. The former Ontario Air National Guard Training Site is located on a small portion of the former Ontario Army Airfield (DERP Site No. J09CA053100). The U.S. Air Force acquired the site for the use of the CANG. The CANG used the site from 1949 to about 1980 for ANG flight training. The former ANG site was disposed of to the LADA in 1988. LADA has leased this area to various tenants whom have used the hangar located on this site.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 12/11/2017	Source: EPA
Date Data Arrived at EDR: 12/22/2017	Telephone: N/A
Date Made Active in Reports: 01/05/2018	Last EDR Contact: 02/06/2018
Number of Days to Update: 14	Next Scheduled EDR Contact: 05/21/2018
	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991	Source: EPA
Date Data Arrived at EDR: 02/02/1994	Telephone: 202-564-4267

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 12/11/2017	Source: EPA
Date Data Arrived at EDR: 12/22/2017	Telephone: N/A
Date Made Active in Reports: 01/05/2018	Last EDR Contact: 02/06/2018

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 11/07/2016	Source: Environmental Protection Agency
Date Data Arrived at EDR: 01/05/2017	Telephone: 703-603-8704
Date Made Active in Reports: 04/07/2017	Last EDR Contact: 01/05/2018
Number of Days to Update: 92	Next Scheduled EDR Contact: 04/16/2018
	Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 12/11/2017	Source: EPA
Date Data Arrived at EDR: 12/22/2017	Telephone: 800-424-9346
Date Made Active in Reports: 01/12/2018	Last EDR Contact: 02/06/2018
Number of Days to Update: 21	Next Scheduled EDR Contact: 04/30/2018
	Data Release Frequency: Quarterly

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Date of Government Version: 12/11/2017	Source: EPA
Date Data Arrived at EDR: 12/22/2017	Telephone: 800-424-9346

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 12/11/2017	Source: Environmental Protection Agency
Date Data Arrived at EDR: 12/26/2017	Telephone: (415) 495-8895
Date Made Active in Reports: 02/09/2018	Last EDR Contact: 01/19/2018
Number of Days to Update: 45	Next Scheduled EDR Contact: 04/09/2018

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 12/11/2017	Source: Environmental Protection Agency
Date Data Arrived at EDR: 12/26/2017	Telephone: (415) 495-8895
Date Made Active in Reports: 02/09/2018	Last EDR Contact: 01/19/2018
Number of Days to Update: 45	Next Scheduled EDR Contact: 04/09/2018

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 12/11/2017	Source: Environmental Protection Agency
Date Data Arrived at EDR: 12/26/2017	Telephone: (415) 495-8895
Date Made Active in Reports: 02/09/2018	Last EDR Contact: 01/19/2018
Number of Days to Update: 45	Next Scheduled EDR Contact: 04/09/2018
	Data Release Frequency: Quarterly

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Date of Government Version: 12/11/2017	Source: Environmental Protection Agency
Date Data Arrived at EDR: 12/26/2017	Telephone: (415) 495-8895
Date Made Active in Reports: 02/09/2018	Last EDR Contact: 01/19/2018
Number of Days to Update: 45	Next Scheduled EDR Contact: 04/09/2018

Federal institutional controls / engineering controls registries

LUCIS: Land Use Control Information System

LUCIS contains records of land use control information pertaining to the former Navy Base Realignment and Closure properties.

Date of Government Version: 05/22/2017	Source: Department of the Navy
Date Data Arrived at EDR: 06/13/2017	Telephone: 843-820-7326
Date Made Active in Reports: 09/15/2017	Last EDR Contact: 02/09/2018
Number of Days to Update: 94	Next Scheduled EDR Contact: 05/28/2018
	Data Release Frequency: Varies

US ENG CONTROLS: Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 11/13/2017	Source: Environmental Protection Agency
Date Data Arrived at EDR: 11/27/2017	Telephone: 703-603-0695
Date Made Active in Reports: 02/09/2018	Last EDR Contact: 02/27/2018
Number of Days to Update: 74	Next Scheduled EDR Contact: 06/11/2018
	Data Release Frequency: Varies

US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 11/13/2017	Source: Environmental Protection Agency
Date Data Arrived at EDR: 11/27/2017	Telephone: 703-603-0695

State- and tribal - equivalent CERCLIS

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

Next Scheduled EDR Contact: 04/09/2018
Data Release Frequency: Quarterly

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

SSTS: Section 7 Tracking Systems

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006	Source: Environmental Protection Agency

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water board's review found that more than one-third of the region's active disposal pits are operating without permission.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.
Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General South

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Flood Plain Panel at Target Property</u>	<u>FEMA Source Type</u>

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u>	<u>NWI Electronic</u>
ONTARIO	<u>Data Coverage</u>
	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION</u> <u>FROM TP</u>	<u>GENERAL DIRECTION</u> <u>GROUNDWATER FLOW</u>
Not Reported		

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: TUJUNGA

Soil Surface Texture: gravelly loamy sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Somewhat excessively drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	18 inches	gravelly loamy sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 7.3 Min: 6.1
2	18 inches	59 inches	loamy sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 7.8 Min: 6.1

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

CA WELLS 1099

Water System Information:

Prime Station Code:	01S/07W-32C01 S	User ID:	TAN
FRDS Number:	3610034029	County:	San Bernardino
District Number:	13	Station Type:	WELL/AMBNT
Water Type:	Well/Groundwater	Well Status:	Active Raw
Source Lat/Long:	340250.0 1173810.0	Precision:	1,000 Feet (10 Seconds)
Source Name:	WELL 34		
System Number:	3610034		
System Name:	ONTARIO, CITY OF		
Organization That Operates System:	303 EAST B STREET ONTARIO, CA 91764		
Pop Served:	140000	Connections:	30927
Area Served:	ONTARIO CITY

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory

Source: Department of Fish & Game

Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Well Database

Source: Department of Water Resources

Telephone: 916-651-9648

California Drinking Water Quality Database

Source: Department of Public Health

Telephone: 916-324-2319

The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

OTHER STATE DATABASE INFORMATION

California Oil and Gas Well Locations

Source: Department of Conservation

Telephone: 916-323-1779

Oil and Gas well locations in the state.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Group Delta Consultants were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDR's Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1922 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

Certified Sanborn® Map Report

03/07/18

Site Name:

Potential O&M Facilities
1333 S Bon View Ave
Ontario, CA 91761
EDR Inquiry # 5212074.3

Client Name:

Group Delta Consultants
1035 S. Milliken Ave Suite G
Ontario, CA 91761
Contact: Elaine Horng

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Group Delta Consultants were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

Certification # 67A7-46C3-89C5
PO # EN119
Project O&M Facilities Addendum

UNMAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

Sanborn® Library search results

Certification #: 67A7-46C3-89C5

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- Library of Congress
- University Publications of America
- EDR Private Collection

The Sanborn Library LLC Since 1866™

Limited Permission To Make Copies

Group Delta Consultants (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.
